Pyroelectric sensor

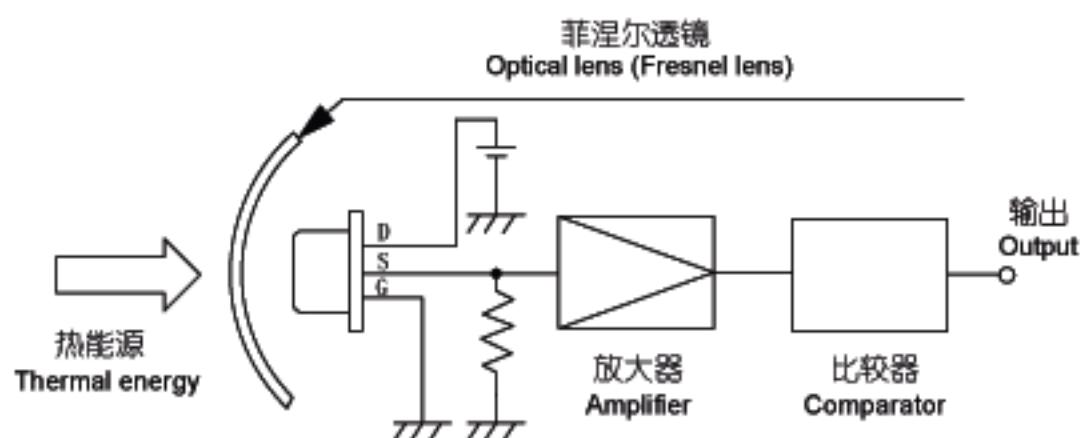

原理和应用简介 Principle of Operation

某些材料的极性分子可以在特定条件下有序排列而形成自发极化，当材料吸收红外线热能产生温度变化时，分子状态发生变化，引起表面束缚电荷变化，这称为热释电效应。利用这种效应，本公司配以不同的工艺结构和不同的红外滤光片，制成单元、双元、四元等数十种热释电传感器，它具有很高的灵敏度，即使极微弱的红外线也能被它敏锐的感知。因而被广泛应用于辐射计测、自动控制和防盗入侵等领域，为人们的工作、生活带来安全、方便和舒适。

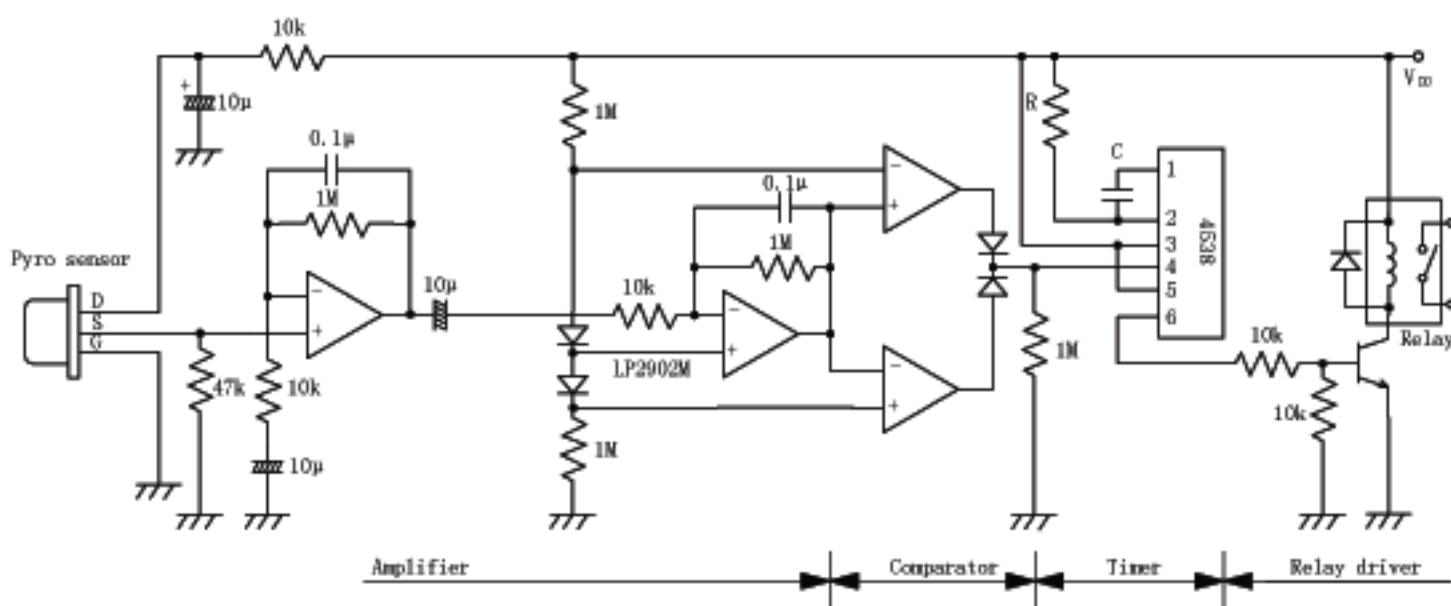

Some material's polar molecules can arrange themselves in order under specific conditions and generate spontaneous polarization. When the material undergoes temperature changes after absorbing infrared heat energy, the molecule state also changes and thereby leads to changes in the surface bound charge. This is what we call pyroelectric effect. Utilizing this effect, and matching it with different process structure and different infrared filters, the company has produced some ten types of pyroelectric sensors including single, double and four-element sensors that are highly sensitive and perceptive even for very weak infrared rays. As a result, the product is widely used in radiation measurement, automatic control and anti-intrusion and has brought about safety, convenience and comfort for people's work and life.
