

2.7V to 6.0V Single Supply CMOS Op Amps

Features

- Single-Supply: 2.7V to 6.0V
- Rail-to-Rail Output
- Input Range Includes Ground
- Gain Bandwidth Product: 2.8 MHz (typical)
- Unity-Gain Stable
- Low Quiescent Current: 230 μ A/amplifier (typical)
- Chip Select (\overline{CS}): **MCP603 only**
- Temperature Ranges:
 - Industrial: -40°C to +85°C
 - Extended: -40°C to +125°C
- Available in Single, Dual, and Quad

Typical Applications

- Portable Equipment
- A/D Converter Driver
- Photo Diode Pre-amp
- Analog Filters
- Data Acquisition
- Notebooks and PDAs
- Sensor Interface

Available Tools

- SPICE Macro Models
- FilterLab[®] Software
- Mindi[™] Simulation Tool
- MAPS (Microchip Advanced Part Selector)
- Analog Demonstration and Evaluation Boards
- Application Notes

Description

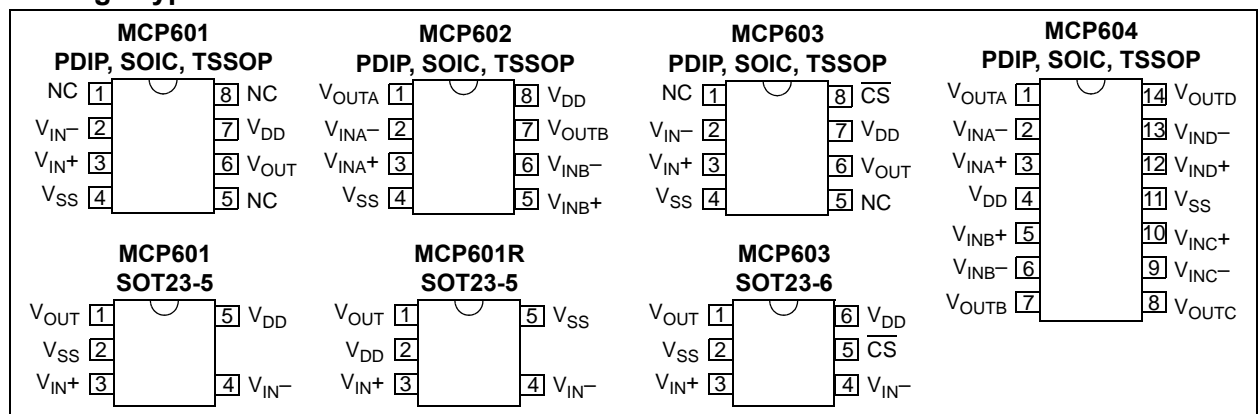

The Microchip Technology Inc. MCP601/1R/2/3/4 family of low-power operational amplifiers (op amps) are offered in single (MCP601), single with Chip Select (\overline{CS}) (MCP603), dual (MCP602), and quad (MCP604) configurations. These op amps utilize an advanced CMOS technology that provides low bias current, high-speed operation, high open-loop gain, and rail-to-rail output swing. This product offering operates with a single supply voltage that can be as low as 2.7V, while drawing 230 μ A (typical) of quiescent current per amplifier. In addition, the common mode input voltage range goes 0.3V below ground, making these amplifiers ideal for single-supply operation.

These devices are appropriate for low power, battery operated circuits due to the low quiescent current, for A/D convert driver amplifiers because of their wide bandwidth or for anti-aliasing filters by virtue of their low input bias current.

The MCP601, MCP602, and MCP603 are available in standard 8-lead PDIP, SOIC, and TSSOP packages. The MCP601 and MCP601R are also available in a standard 5-lead SOT-23 package, while the MCP603 is available in a standard 6-lead SOT-23 package. The MCP604 is offered in standard 14-lead PDIP, SOIC, and TSSOP packages.

The MCP601/1R/2/3/4 family is available in the Industrial and Extended temperature ranges and has a power supply range of 2.7V to 6.0V.

Package Types

MCP601/1R/2/3/4

1.0 ELECTRICAL CHARACTERISTICS

Absolute Maximum Ratings †

| | |
|--|------------------------------------|
| $V_{DD} - V_{SS}$ | 7.0V |
| Current at Input Pins | ± 2 mA |
| Analog Inputs (V_{IN+} , V_{IN-}) †† | $V_{SS} - 1.0V$ to $V_{DD} + 1.0V$ |
| All Other Inputs and Outputs | $V_{SS} - 0.3V$ to $V_{DD} + 0.3V$ |
| Difference Input Voltage | $ V_{DD} - V_{SS} $ |
| Output Short Circuit Current | Continuous |
| Current at Output and Supply Pins | ± 30 mA |
| Storage Temperature..... | $-65^{\circ}C$ to $+150^{\circ}C$ |
| Maximum Junction Temperature (T_J)..... | $+150^{\circ}C$ |
| ESD Protection On All Pins (HBM; MM) | ≥ 3 kV; 200V |

† **Notice:** Stresses above those listed under “Absolute Maximum Ratings” may cause permanent damage to the device. This is a stress rating only and functional operation of the device at those or any other conditions above those indicated in the operational listings of this specification is not implied. Exposure to maximum rating conditions for extended periods may affect device reliability.

†† See Section 4.1.2 “Input Voltage and Current Limits”.

DC CHARACTERISTICS

| Electrical Specifications: Unless otherwise specified, $T_A = +25^{\circ}C$, $V_{DD} = +2.7V$ to $+5.5V$, $V_{SS} = GND$, $V_{CM} = V_{DD}/2$, $V_{OUT} \approx V_{DD}/2$, $V_L = V_{DD}/2$, and $R_L = 100$ k Ω to V_L , and CS is tied low. (Refer to Figure 1-2 and Figure 1-3). | | | | | | |
|--|----------------------------|----------------|--------------|----------------|-------------------|--|
| Parameters | Sym | Min | Typ | Max | Units | Conditions |
| Input Offset | | | | | | |
| Input Offset Voltage | V_{OS} | -2 | ± 0.7 | +2 | mV | |
| Industrial Temperature | V_{OS} | -3 | ± 1 | +3 | mV | $T_A = -40^{\circ}C$ to $+85^{\circ}C$ (Note 1) |
| Extended Temperature | V_{OS} | -4.5 | ± 1 | +4.5 | mV | $T_A = -40^{\circ}C$ to $+125^{\circ}C$ (Note 1) |
| Input Offset Temperature Drift | $\Delta V_{OS}/\Delta T_A$ | — | ± 2.5 | — | $\mu V/^{\circ}C$ | $T_A = -40^{\circ}C$ to $+125^{\circ}C$ |
| Power Supply Rejection | PSRR | 80 | 88 | — | dB | $V_{DD} = 2.7V$ to $5.5V$ |
| Input Current and Impedance | | | | | | |
| Input Bias Current | I_B | — | 1 | — | pA | |
| Industrial Temperature | I_B | — | 20 | 60 | pA | $T_A = +85^{\circ}C$ (Note 1) |
| Extended Temperature | I_B | — | 450 | 5000 | pA | $T_A = +125^{\circ}C$ (Note 1) |
| Input Offset Current | I_{OS} | — | ± 1 | — | pA | |
| Common Mode Input Impedance | Z_{CM} | — | $10^{13} 6$ | — | ΩpF | |
| Differential Input Impedance | Z_{DIFF} | — | $10^{13} 3$ | — | ΩpF | |
| Common Mode | | | | | | |
| Common Mode Input Range | V_{CMR} | $V_{SS} - 0.3$ | — | $V_{DD} - 1.2$ | V | |
| Common Mode Rejection Ratio | CMRR | 75 | 90 | — | dB | $V_{DD} = 5.0V$, $V_{CM} = -0.3V$ to $3.8V$ |
| Open-loop Gain | | | | | | |
| DC Open-loop Gain (large signal) | A_{OL} | 100 | 115 | — | dB | $R_L = 25$ k Ω to V_L , $V_{OUT} = 0.1V$ to $V_{DD} - 0.1V$ |
| | A_{OL} | 95 | 110 | — | dB | $R_L = 5$ k Ω to V_L , $V_{OUT} = 0.1V$ to $V_{DD} - 0.1V$ |
| Output | | | | | | |
| Maximum Output Voltage Swing | V_{OL}, V_{OH} | $V_{SS} + 15$ | — | $V_{DD} - 20$ | mV | $R_L = 25$ k Ω to V_L , Output overdrive = 0.5V |
| | V_{OL}, V_{OH} | $V_{SS} + 45$ | — | $V_{DD} - 60$ | mV | $R_L = 5$ k Ω to V_L , Output overdrive = 0.5V |
| Linear Output Voltage Swing | V_{OUT} | $V_{SS} + 100$ | — | $V_{DD} - 100$ | mV | $R_L = 25$ k Ω to V_L , $A_{OL} \geq 100$ dB |
| | V_{OUT} | $V_{SS} + 100$ | — | $V_{DD} - 100$ | mV | $R_L = 5$ k Ω to V_L , $A_{OL} \geq 95$ dB |
| Output Short Circuit Current | I_{SC} | — | ± 22 | — | mA | $V_{DD} = 5.5V$ |
| | I_{SC} | — | ± 12 | — | mA | $V_{DD} = 2.7V$ |
| Power Supply | | | | | | |
| Supply Voltage | V_{DD} | 2.7 | — | 6.0 | V | (Note 2) |
| Quiescent Current per Amplifier | I_Q | — | 230 | 325 | μA | $I_O = 0$ |

Note 1: These specifications are not tested in either the SOT-23 or TSSOP packages with date codes older than YYWW = 0408. In these cases, the minimum and maximum values are by design and characterization only.

Note 2: All parts with date codes November 2007 and later have been screened to ensure operation at $V_{DD} = 6.0V$. However, the other minimum and maximum specifications are measured at 1.4V and/or 5.5V.

MCP601/1R/2/3/4

AC CHARACTERISTICS

Electrical Specifications: Unless otherwise indicated, $T_A = +25^\circ\text{C}$, $V_{DD} = +2.7\text{V}$ to $+5.5\text{V}$, $V_{SS} = \text{GND}$, $V_{CM} = V_{DD}/2$, $V_{OUT} \approx V_{DD}/2$, $V_L = V_{DD}/2$, and $R_L = 100\text{ k}\Omega$ to V_L , $C_L = 50\text{ pF}$, and $\overline{\text{CS}}$ is tied low. (Refer to [Figure 1-2](#) and [Figure 1-3](#)).

| Parameters | Sym | Min | Typ | Max | Units | Conditions |
|-----------------------------|---------------------|-----|-----|-----|------------------------------|---------------------------------------|
| Frequency Response | | | | | | |
| Gain Bandwidth Product | GBWP | — | 2.8 | — | MHz | |
| Phase Margin | PM | — | 50 | — | ° | $G = +1\text{ V/V}$ |
| Step Response | | | | | | |
| Slew Rate | SR | — | 2.3 | — | $\text{V}/\mu\text{s}$ | $G = +1\text{ V/V}$ |
| Settling Time (0.01%) | t_{settle} | — | 4.5 | — | μs | $G = +1\text{ V/V}$, 3.8V step |
| Noise | | | | | | |
| Input Noise Voltage | E_{ni} | — | 7 | — | $\mu\text{V}_{\text{p-p}}$ | $f = 0.1\text{ Hz}$ to 10 Hz |

TEMPERATURE CHARACTERISTICS

| Electrical Specifications: Unless otherwise indicated, $V_{DD} = +2.7V$ to $+5.5V$ and $V_{SS} = GND$. | | | | | | |
|---|---------------|-----|-----|------|-------|------------------------------|
| Parameters | Sym | Min | Typ | Max | Units | Conditions |
| Temperature Ranges | | | | | | |
| Specified Temperature Range | T_A | -40 | — | +85 | °C | Industrial temperature parts |
| | T_A | -40 | — | +125 | °C | Extended temperature parts |
| Operating Temperature Range | T_A | -40 | — | +125 | °C | Note |
| Storage Temperature Range | T_A | -65 | — | +150 | °C | |
| Thermal Package Resistances | | | | | | |
| Thermal Resistance, 5L-SOT23 | θ_{JA} | — | 256 | — | °C/W | |
| Thermal Resistance, 6L-SOT23 | θ_{JA} | — | 230 | — | °C/W | |
| Thermal Resistance, 8L-PDIP | θ_{JA} | — | 85 | — | °C/W | |
| Thermal Resistance, 8L-SOIC | θ_{JA} | — | 163 | — | °C/W | |
| Thermal Resistance, 8L-TSSOP | θ_{JA} | — | 124 | — | °C/W | |
| Thermal Resistance, 14L-PDIP | θ_{JA} | — | 70 | — | °C/W | |
| Thermal Resistance, 14L-SOIC | θ_{JA} | — | 120 | — | °C/W | |
| Thermal Resistance, 14L-TSSOP | θ_{JA} | — | 100 | — | °C/W | |

Note: The Industrial temperature parts operate over this extended range, but with reduced performance. The Extended temperature specs do not apply to Industrial temperature parts. In any case, the internal Junction temperature (T_J) must not exceed the absolute maximum specification of 150°C.

1.1 Test Circuits

The test circuits used for the DC and AC tests are shown in Figure 1-2 and Figure 1-3. The bypass capacitors are laid out according to the rules discussed in Section 4.5 “Supply Bypass”.

FIGURE 1-2: AC and DC Test Circuit for Most Non-Inverting Gain Conditions.

FIGURE 1-3: AC and DC Test Circuit for Most Inverting Gain Conditions.

2.0 TYPICAL PERFORMANCE CURVES

Note: The graphs and tables provided following this note are a statistical summary based on a limited number of samples and are provided for informational purposes only. The performance characteristics listed herein are not tested or guaranteed. In some graphs or tables, the data presented may be outside the specified operating range (e.g., outside specified power supply range) and therefore outside the warranted range.

Note: Unless otherwise indicated, $T_A = +25^\circ\text{C}$, $V_{DD} = +2.7\text{V}$ to $+5.5\text{V}$, $V_{SS} = \text{GND}$, $V_{CM} = V_{DD}/2$, $V_{OUT} \approx V_{DD}/2$, $V_L = V_{DD}/2$, $R_L = 100\text{ k}\Omega$ to V_L , $C_L = 50\text{ pF}$ and CS is tied low.

| — | 8 | V_{OUTC} | Analog Output (op amp C) |
| — | 9 | V_{INC-} | Inverting Input (op amp C) |
| — | 10 | V_{INC+} | Non-inverting Input (op amp C) |
| 4 | 11 | V_{SS} | Negative Power Supply |
| — | 12 | V_{IND+} | Non-inverting Input (op amp D) |
| — | 13 | V_{IND-} | Inverting Input (op amp D) |
| — | 14 | V_{OUTD} | Analog Output (op amp D) |

3.1 Analog Outputs

The op amp output pins are low-impedance voltage sources.

3.2 Analog Inputs

The op amp non-inverting and inverting inputs are high-impedance CMOS inputs with low bias currents.

3.3 Chip Select Digital Input

This is a CMOS, Schmitt-triggered input that places the part into a low power mode of operation.

3.4 Power Supply Pins

The positive power supply pin (V_{DD}) is 2.5V to 6.0V higher than the negative power supply pin (V_{SS}). For normal operation, the other pins are at voltages between V_{SS} and V_{DD} .

Typically, these parts are used in a single (positive) supply configuration. In this case, V_{SS} is connected to ground and V_{DD} is connected to the supply. V_{DD} will need bypass capacitors.

MCP601/1R/2/3/4

4.0 APPLICATIONS INFORMATION

The MCP601/1R/2/3/4 family of op amps are fabricated on Microchip's state-of-the-art CMOS process. They are unity-gain stable and suitable for a wide range of general purpose applications.

4.1 Inputs

4.1.1 PHASE REVERSAL

The MCP601/1R/2/3/4 op amp is designed to prevent phase reversal when the input pins exceed the supply voltages. [Figure 2-34](#) shows the input voltage exceeding the supply voltage without any phase reversal.

4.1.2 INPUT VOLTAGE AND CURRENT LIMITS

The ESD protection on the inputs can be depicted as shown in [Figure 4-1](#). This structure was chosen to protect the input transistors, and to minimize input bias current (I_B). The input ESD diodes clamp the inputs when they try to go more than one diode drop below V_{SS} . They also clamp any voltages that go too far above V_{DD} ; their breakdown voltage is high enough to allow normal operation, and low enough to bypass quick ESD events within the specified limits.

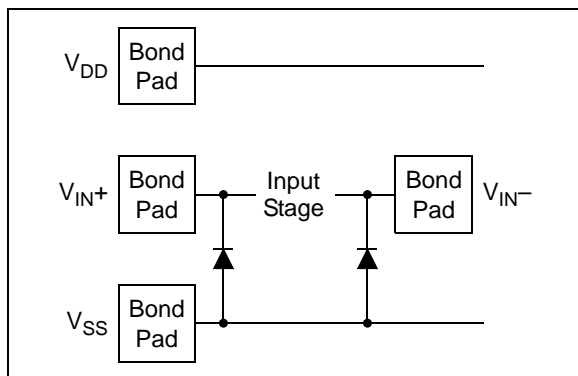

FIGURE 4-1: Simplified Analog Input ESD Structures.

In order to prevent damage and/or improper operation of these op amps, the circuit they are in must limit the currents and voltages at the V_{IN+} and V_{IN-} pins (see **Absolute Maximum Ratings †** at the beginning of **Section 1.0 "Electrical Characteristics"**). [Figure 4-2](#) shows the recommended approach to protecting these inputs. The internal ESD diodes prevent the input pins (V_{IN+} and V_{IN-}) from going too far below ground, and the resistors R_1 and R_2 limit the possible current drawn out of the input pins. Diodes D_1 and D_2 prevent the input pins (V_{IN+} and V_{IN-}) from going too far above V_{DD} , and dump any currents onto V_{DD} . When implemented as shown, resistors R_1 and R_2 also limit the current through D_1 and D_2 .

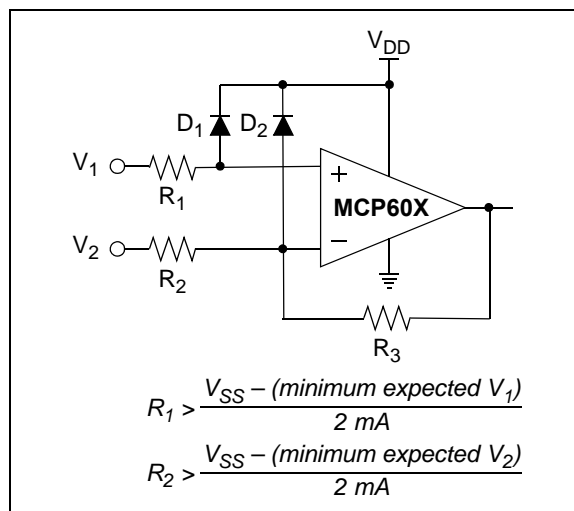

FIGURE 4-2: Protecting the Analog Inputs.

It is also possible to connect the diodes to the left of resistors R_1 and R_2 . In this case, current through the diodes D_1 and D_2 needs to be limited by some other mechanism. The resistors then serve as in-rush current limiters; the DC current into the input pins (V_{IN+} and V_{IN-}) should be very small.

A significant amount of current can flow out of the inputs when the common mode voltage (V_{CM}) is below ground (V_{SS}); see [Figure 2-34](#). Applications that are high impedance may need to limit the useable voltage range.

4.1.3 NORMAL OPERATION

The Common Mode Input Voltage Range (V_{CMR}) includes ground in single-supply systems (V_{SS}), but does not include V_{DD} . This means that the amplifier input behaves linearly as long as the Common Mode Input Voltage (V_{CM}) is kept within the specified V_{CMR} limits ($V_{SS}-0.3V$ to $V_{DD}-1.2V$ at $+25^\circ C$).

[Figure 4-3](#) shows a unity gain buffer. Since V_{OUT} is the same voltage as the inverting input, V_{OUT} must be kept below $V_{DD}-1.2V$ for correct operation.

FIGURE 4-3: Unity Gain Buffer has a Limited V_{OUT} Range.

4.2 Rail-to-Rail Output

There are two specifications that describe the output swing capability of the MCP601/1R/2/3/4 family of op amps. The first specification (Maximum Output Voltage Swing) defines the absolute maximum swing that can be achieved under the specified load conditions. For instance, the output voltage swings to within 15 mV of the negative rail with a 25 kΩ load to $V_{DD}/2$. Figure 2-33 shows how the output voltage is limited when the input goes beyond the linear region of operation.

The second specification that describes the output swing capability of these amplifiers is the Linear Output Voltage Swing. This specification defines the maximum output swing that can be achieved while the amplifier is still operating in its linear region. To verify linear operation in this range, the large signal (DC Open-Loop Gain (A_{OL})) is measured at points 100 mV inside the supply rails. The measurement must exceed the specified gains in the specification table.

4.3 MCP603 Chip Select

The MCP603 is a single amplifier with Chip Select (CS). When CS is pulled high, the supply current drops to -0.7 μA (typ.), which is pulled through the CS pin to V_{SS} . When this happens, the amplifier output is put into a high-impedance state. Pulling CS low enables the amplifier.

The CS pin has an internal 5 MΩ (typical) pull-down resistor connected to V_{SS} , so it will go low if the CS pin is left floating. Figure 1-1 is the Chip Select timing diagram and shows the output voltage, supply currents, and CS current in response to a CS pulse. Figure 2-27 shows the measured output voltage response to a CS pulse.

4.4 Capacitive Loads

Driving large capacitive loads can cause stability problems for voltage feedback op amps. As the load capacitance increases, the feedback loop's phase margin decreases and the closed-loop bandwidth is reduced. This produces gain peaking in the frequency response with overshoot and ringing in the step response.

When driving large capacitive loads with these op amps (e.g., > 40 pF when $G = +1$), a small series resistor at the output (R_{ISO} in Figure 4-4) improves the feedback loop's phase margin (stability) by making the output load resistive at higher frequencies. The bandwidth will be generally lower than the bandwidth with no capacitive load.

FIGURE 4-4: Output resistor R_{ISO} stabilizes large capacitive loads.

Figure 4-5 gives recommended R_{ISO} values for different capacitive loads and gains. The x-axis is the normalized load capacitance (C_L/G_N) in order to make it easier to interpret the plot for arbitrary gains. G_N is the circuit's noise gain. For non-inverting gains, G_N and the gain are equal. For inverting gains, $G_N = 1 + |\text{Gain}|$ (e.g., -1 V/V gives $G_N = +2$ V/V).

FIGURE 4-5: Recommended R_{ISO} values for capacitive loads.

Once you have selected R_{ISO} for your circuit, double-check the resulting frequency response peaking and step response overshoot in your circuit. Evaluation on the bench and simulations with the MCP601/1R/2/3/4 SPICE macro model are very helpful. Modify R_{ISO} 's value until the response is reasonable.

4.5 Supply Bypass

With this family of op amps, the power supply pin (V_{DD} for single-supply) should have a local bypass capacitor (i.e., 0.01 μF to 0.1 μF) within 2 mm for good high-frequency performance. It also needs a bulk capacitor (i.e., 1 μF or larger) within 100 mm to provide large, slow currents. This bulk capacitor can be shared with nearby analog parts.

MCP601/1R/2/3/4

4.6 Unused Op Amps

An unused op amp in a quad package (MCP604) should be configured as shown in Figure 4-6. These circuits prevent the output from toggling and causing crosstalk. Circuit A sets the op amp at its minimum noise gain. The resistor divider produces any desired reference voltage within the output voltage range of the op amp; the op amp buffers that reference voltage. Circuit B uses the minimum number of components and operates as a comparator, but it may draw more current.

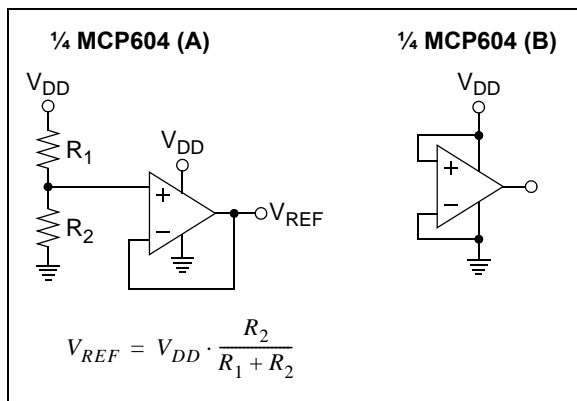

FIGURE 4-6: Unused Op Amps.

4.7 PCB Surface Leakage

In applications where low input bias current is critical, printed circuit board (PCB) surface leakage effects need to be considered. Surface leakage is caused by humidity, dust or other contamination on the board. Under low humidity conditions, a typical resistance between nearby traces is $10^{12}\Omega$. A 5V difference would cause 5 pA of current to flow. This is greater than the MCP601/1R/2/3/4 family's bias current at +25°C (1 pA, typical).

The easiest way to reduce surface leakage is to use a guard ring around sensitive pins (or traces). The guard ring is biased at the same voltage as the sensitive pin. An example of this type of layout is shown in Figure 4-7.

FIGURE 4-7: Example Guard Ring layout.

1. Connect the guard ring to the inverting input pin (V_{IN-}) for non-inverting gain amplifiers, including unity-gain buffers. This biases the guard ring to the common mode input voltage.

2. Connect the guard ring to the non-inverting input pin (V_{IN+}) for inverting gain amplifiers and transimpedance amplifiers (converts current to voltage, such as photo detectors). This biases the guard ring to the same reference voltage as the op amp (e.g., $V_{DD}/2$ or ground).

4.8 Typical Applications

4.8.1 ANALOG FILTERS

Figure 4-8 and Figure 4-9 show low-pass, second-order, Butterworth filters with a cutoff frequency of 10 Hz. The filter in Figure 4-8 has a non-inverting gain of +1 V/V, and the filter in Figure 4-9 has an inverting gain of -1 V/V.

FIGURE 4-8: Second-Order, Low-Pass Sallen-Key Filter.

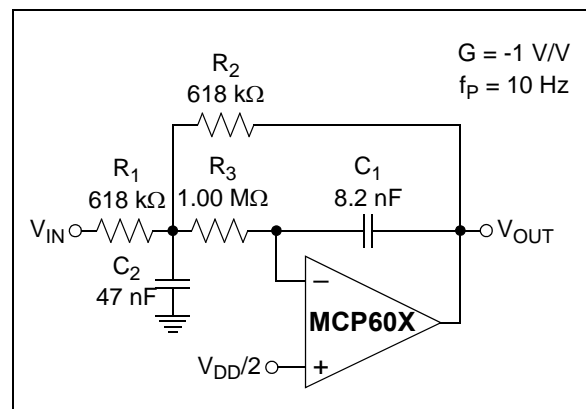

FIGURE 4-9: Second-Order, Low-Pass Multiple-Feedback Filter.

The MCP601/1R/2/3/4 family of op amps have low input bias current, which allows the designer to select larger resistor values and smaller capacitor values for these filters. This helps produce a compact PCB layout. These filters, and others, can be designed using Microchip's Design Aids; see Section 5.2 "FilterLab® Software" and Section 5.3 "Mindi™ Simulator Tool".

4.8.2 INSTRUMENTATION AMPLIFIER CIRCUITS

Instrumentation amplifiers have a differential input that subtracts one input voltage from another and rejects common mode signals. These amplifiers also provide a single-ended output voltage.

The three-op amp instrumentation amplifier is illustrated in Figure 4-10. One advantage of this approach is unity-gain operation, while one disadvantage is that the common mode input range is reduced as R_2/R_G gets larger.

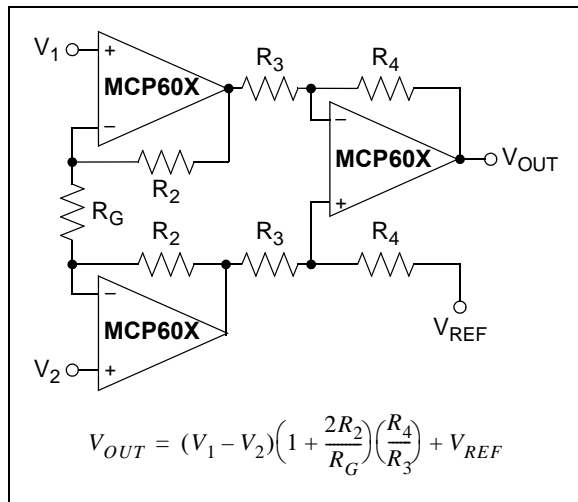

FIGURE 4-10: Three-Op Amp Instrumentation Amplifier.

The two-op amp instrumentation amplifier is shown in Figure 4-11. While its power consumption is lower than the three-op amp version, its main drawbacks are that the common mode range is reduced with higher gains and it must be configured in gains of two or higher.

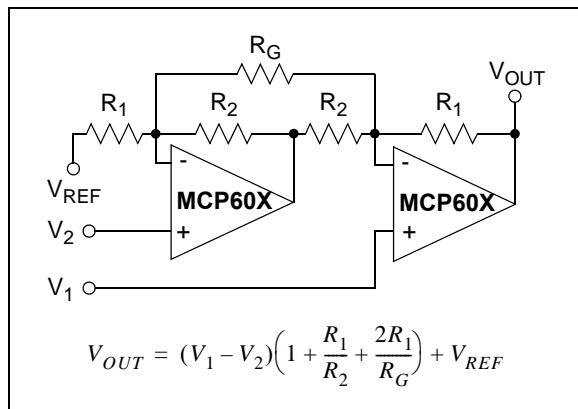

FIGURE 4-11: Two-Op Amp Instrumentation Amplifier.

Both instrumentation amplifiers should use a bulk bypass capacitor of at least 1 μ F. The CMRR of these amplifiers will be set by both the op amp CMRR and resistor matching.

4.8.3 PHOTO DETECTION

The MCP601/1R/2/3/4 op amps can be used to easily convert the signal from a sensor that produces an output current (such as a photo diode) into a voltage (a transimpedance amplifier). This is implemented with a single resistor (R_2) in the feedback loop of the amplifiers shown in Figure 4-12 and Figure 4-13. The optional capacitor (C_2) sometimes provides stability for these circuits.

A photodiode configured in the Photovoltaic mode has zero voltage potential placed across it (Figure 4-12). In this mode, the light sensitivity and linearity is maximized, making it best suited for precision applications. The key amplifier specifications for this application are: low input bias current, low noise, common mode input voltage range (including ground), and rail-to-rail output.

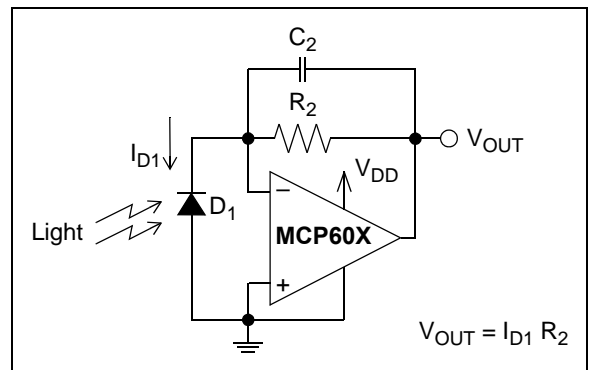

FIGURE 4-12: Photovoltaic Mode Detector.

In contrast, a photodiode that is configured in the Photoconductive mode has a reverse bias voltage across the photo-sensing element (Figure 4-13). This decreases the diode capacitance, which facilitates high-speed operation (e.g., high-speed digital communications). The design trade-off is increased diode leakage current and linearity errors. The op amp needs to have a wide Gain Bandwidth Product (GBWP).

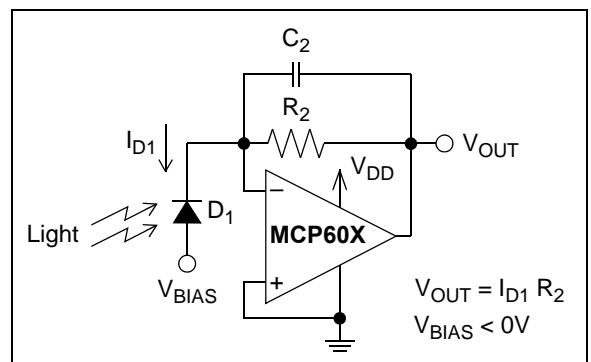

FIGURE 4-13: Photoconductive Mode Detector.

MCP601/1R/2/3/4

5.0 DESIGN AIDS

Microchip provides the basic design tools needed for the MCP601/1R/2/3/4 family of op amps.

5.1 SPICE Macro Model

The latest SPICE macro model for the MCP601/1R/2/3/4 op amps is available on the Microchip web site at www.microchip.com. This model is intended to be an initial design tool that works well in the op amp's linear region of operation over the temperature range. See the model file for information on its capabilities.

Bench testing is a very important part of any design and cannot be replaced with simulations. Also, simulation results using this macro model need to be validated by comparing them to the data sheet specifications and characteristic curves.

5.2 FilterLab[®] Software

Microchip's FilterLab[®] software is an innovative software tool that simplifies analog active filter (using op amps) design. Available at no cost from the Microchip web site at www.microchip.com/filterlab, the FilterLab design tool provides full schematic diagrams of the filter circuit with component values. It also outputs the filter circuit in SPICE format, which can be used with the macro model to simulate actual filter performance.

5.3 Mindi[™] Simulator Tool

Microchip's Mindi[™] simulator tool aids in the design of various circuits useful for active filter, amplifier and power-management applications. It is a free online simulation tool available from the Microchip web site at www.microchip.com/mindi. This interactive simulator enables designers to quickly generate circuit diagrams, simulate circuits. Circuits developed using the Mindi simulation tool can be downloaded to a personal computer or workstation.

5.4 MAPS (Microchip Advanced Part Selector)

MAPS is a software tool that helps semiconductor professionals efficiently identify Microchip devices that fit a particular design requirement. Available at no cost from the Microchip website at www.microchip.com/maps, the MAPS is an overall selection tool for Microchip's product portfolio that includes Analog, Memory, MCUs and DSCs. Using this tool you can define a filter to sort features for a parametric search of devices and export side-by-side technical comparison reports. Helpful links are also provided for Datasheets, Purchase, and Sampling of Microchip parts.

5.5 Analog Demonstration and Evaluation Boards

Microchip offers a broad spectrum of Analog Demonstration and Evaluation Boards that are designed to help you achieve faster time to market. For a complete listing of these boards and their corresponding user's guides and technical information, visit the Microchip web site at www.microchip.com/analogtools.

Two of our boards that are especially useful are:

- **P/N SOIC8EV:** 8-Pin SOIC/MSOP/TSSOP/DIP Evaluation Board
- **P/N SOIC14EV:** 14-Pin SOIC/TSSOP/DIP Evaluation Board

5.6 Application Notes

The following Microchip Application Notes are available on the Microchip web site at www.microchip.com/appnotes and are recommended as supplemental reference resources.

ADN003: "Select the Right Operational Amplifier for your Filtering Circuits", DS21821

AN722: "Operational Amplifier Topologies and DC Specifications", DS00722

AN723: "Operational Amplifier AC Specifications and Applications", DS00723

AN884: "Driving Capacitive Loads With Op Amps", DS00884

AN990: "Analog Sensor Conditioning Circuits – An Overview", DS00990

These application notes and others are listed in the design guide:

"Signal Chain Design Guide", DS21825

MCP601/1R/2/3/4

6.0 PACKAGING INFORMATION

6.1 Package Marking Information

5-Lead SOT-23 (MCP601 and MCP601R only)

| Device | I-Temp Code | E-Temp Code |
|---------|-------------|-------------|
| MCP601 | SANN | SLNN |
| MCP601R | SJNN | SMNN |

Example:

6-Lead SOT-23 (MCP603 only)

| Device | I-Temp Code | E-Temp Code |
|--------|-------------|-------------|
| MCP603 | AENN | AUNN |

Example:

| | | |
|----------------|---|--|
| Legend: | XX...X | Customer-specific information |
| | Y | Year code (last digit of calendar year) |
| | YY | Year code (last 2 digits of calendar year) |
| | WW | Week code (week of January 1 is week '01') |
| | NNN | Alphanumeric traceability code |
| | (e3) | Pb-free JEDEC designator for Matte Tin (Sn) |
| | * | This package is Pb-free. The Pb-free JEDEC designator (e3) can be found on the outer packaging for this package. |
| Note: | In the event the full Microchip part number cannot be marked on one line, it will be carried over to the next line, thus limiting the number of available characters for customer-specific information. | |

NOTES:

APPENDIX A: REVISION HISTORY

Revision G (December 2007)

- Updated Figure 2-15 and Figure 2-19.
- Updated Table 3-1 and Table 3-2.
- Updated notes to **Section 1.0 “Electrical Characteristics”**.
- Expanded Analog Input Absolute Maximum Voltage Range (applies retroactively).
- Expanded operating V_{DD} to a maximum of 6.0V.
- Added Figure 2-34.
- Added **Section 4.1.1 “Phase Reversal”**, **Section 4.1.2 “Input Voltage and Current Limits”**, and **Section 4.1.3 “Normal Operation”**.
- Corrected **Section 6.0 “Packaging Information”**.

Revision F (February 2004)

- Undocumented changes.

Revision E (September 2003)

- Undocumented changes.

Revision D (April 2000)

- Undocumented changes.

Revision C (July 1999)

- Undocumented changes.

Revision B (June 1999)

- Undocumented changes.

Revision A (March 1999)

- Original Release of this Document.

NOTES:

MCP601/1R/2/3/4

PRODUCT IDENTIFICATION SYSTEM

To order or obtain information, e.g., on pricing or delivery, refer to the factory or the listed sales office.

| <u>PART NO.</u> | <u>-X</u> | <u>/XX</u> | Examples: |
|-------------------|--------------------------|--|--|
| Device | Temperature Range | Package | |
| Device | MCP601 | Single Op Amp | a) MCP601-I/P: Single Op Amp, Industrial Temperature, 8 lead PDIP package. |
| | MCP601T | Single Op Amp (Tape and Reel for SOT-23, SOIC and TSSOP) | b) MCP601-E/SN: Single Op Amp, Extended Temperature, 8 lead SOIC package. |
| | MCP601RT | Single Op Amp (Tape and Reel for SOT-23-5) | c) MCP601T-E/ST: Tape and Reel, Extended Temperature, Single Op Amp, 8 lead TSSOP package |
| | MCP602 | Dual Op Amp | d) MCP601RT-I/OT: Tape and Reel, Industrial Temperature, Single Op Amp, Rotated 5 lead SOT-23 package. |
| | MCP602T | Dual Op Amp (Tape and Reel for SOIC and TSSOP) | e) MCP601RT-E/OT: Tape and Reel, Extended Temperature, Single Op Amp, Rotated, 5 lead SOT-23 package. |
| | MCP603 | Single Op Amp with Chip Select | a) MCP602-I/SN: Dual Op Amp, Industrial Temperature, 8 lead SOIC package. |
| | MCP603T | Single Op Amp with Chip Select (Tape and Reel for SOT-23, SOIC and TSSOP) | b) MCP602-E/P: Dual Op Amp, Extended Temperature, 8 lead PDIP package. |
| | MCP604 | Quad Op Amp | c) MCP602T-E/ST: Tape and Reel, Extended Temperature, Dual Op Amp, 8 lead TSSOP package. |
| | MCP604T | Quad Op Amp (Tape and Reel for SOIC and TSSOP) | a) MCP603-I/SN: Industrial Temperature, Single Op Amp with Chip Select, 8 lead SOIC package. |
| Temperature Range | I | = -40° C to +85° C | b) MCP603-E/P: Extended Temperature, Single Op Amp with Chip Select, 8 lead PDIP package. |
| | E | = -40° C to +125° C | c) MCP603T-E/ST: Tape and Reel, Extended Temperature, Single Op Amp with Chip Select 8 lead TSSOP package. |
| Package | OT | = Plastic SOT-23, 5-lead (MCP601 only) | d) MCP603T-I/SN: Tape and Reel, Industrial Temperature, Single Op Amp with Chip Select, 8 lead SOIC package. |
| | CH | = Plastic SOT-23, 6-lead (MCP603 only) | a) MCP604-I/P: Industrial Temperature, Quad Op Amp, 14 lead PDIP package. |
| | P | = Plastic DIP (300 mil body), 8, 14 lead | b) MCP604-E/SL: Extended Temperature, Quad Op Amp, 14 lead SOIC package. |
| | SN | = Plastic SOIC (3.90 mm body), 8 lead | c) MCP604T-E/ST: Tape and Reel, Extended Temperature, Quad Op Amp, 14 lead TSSOP package. |
| | SL | = Plastic SOIC (3.90 mm body), 14 lead | |
| | ST | = Plastic TSSOP (4.4 mm body), 8, 14 lead | |

MCP601/1R/2/3/4

NOTES:

Note the following details of the code protection feature on Microchip devices:

- Microchip products meet the specification contained in their particular Microchip Data Sheet.
- Microchip believes that its family of products is one of the most secure families of its kind on the market today, when used in the intended manner and under normal conditions.
- There are dishonest and possibly illegal methods used to breach the code protection feature. All of these methods, to our knowledge, require using the Microchip products in a manner outside the operating specifications contained in Microchip's Data Sheets. Most likely, the person doing so is engaged in theft of intellectual property.
- Microchip is willing to work with the customer who is concerned about the integrity of their code.
- Neither Microchip nor any other semiconductor manufacturer can guarantee the security of their code. Code protection does not mean that we are guaranteeing the product as "unbreakable."

Code protection is constantly evolving. We at Microchip are committed to continuously improving the code protection features of our products. Attempts to break Microchip's code protection feature may be a violation of the Digital Millennium Copyright Act. If such acts allow unauthorized access to your software or other copyrighted work, you may have a right to sue for relief under that Act.

Information contained in this publication regarding device applications and the like is provided only for your convenience and may be superseded by updates. It is your responsibility to ensure that your application meets with your specifications. MICROCHIP MAKES NO REPRESENTATIONS OR WARRANTIES OF ANY KIND WHETHER EXPRESS OR IMPLIED, WRITTEN OR ORAL, STATUTORY OR OTHERWISE, RELATED TO THE INFORMATION, INCLUDING BUT NOT LIMITED TO ITS CONDITION, QUALITY, PERFORMANCE, MERCHANTABILITY OR FITNESS FOR PURPOSE. Microchip disclaims all liability arising from this information and its use. Use of Microchip devices in life support and/or safety applications is entirely at the buyer's risk, and the buyer agrees to defend, indemnify and hold harmless Microchip from any and all damages, claims, suits, or expenses resulting from such use. No licenses are conveyed, implicitly or otherwise, under any Microchip intellectual property rights.

Trademarks

The Microchip name and logo, the Microchip logo, Accuron, dsPIC, KEELOQ, KEELOQ logo, microID, MPLAB, PIC, PICmicro, PICSTART, PRO MATE, rPIC and SmartShunt are registered trademarks of Microchip Technology Incorporated in the U.S.A. and other countries.

AmpLab, FilterLab, Linear Active Thermistor, Migratable Memory, MXDEV, MXLAB, SEEVAL, SmartSensor and The Embedded Control Solutions Company are registered trademarks of Microchip Technology Incorporated in the U.S.A.

Analog-for-the-Digital Age, Application Maestro, CodeGuard, dsPICDEM, dsPICDEM.net, dsPICworks, dsSPEAK, ECAN, ECONOMONITOR, FanSense, FlexROM, fuzzyLAB, In-Circuit Serial Programming, ICSP, ICEPIC, Mindi, MiWi, MPASM, MPLAB Certified logo, MPLIB, MPLINK, PICKit, PICDEM, PICDEM.net, PICLAB, PICtail, PowerCal, PowerInfo, PowerMate, PowerTool, REAL ICE, rLAB, Select Mode, Smart Serial, SmartTel, Total Endurance, UNI/O, WiperLock and ZENA are trademarks of Microchip Technology Incorporated in the U.S.A. and other countries.

SQTP is a service mark of Microchip Technology Incorporated in the U.S.A.

All other trademarks mentioned herein are property of their respective companies.

**QUALITY MANAGEMENT SYSTEM
CERTIFIED BY DNV
== ISO/TS 16949:2002 ==**

Microchip received ISO/TS-16949:2002 certification for its worldwide headquarters, design and wafer fabrication facilities in Chandler and Tempe, Arizona; Gresham, Oregon and design centers in California and India. The Company's quality system processes and procedures are for its PIC® MCUs and dsPIC® DSCs, KEELOQ® code hopping devices, Serial EEPROMs, microperipherals, nonvolatile memory and analog products. In addition, Microchip's quality system for the design and manufacture of development systems is ISO 9001:2000 certified.
