TEXAS INSTRUMENTS

TPS3831, TPS3839

SBVS193D – JUNE 2012 – REVISED JULY 2015

TPS383x 150-nA, Ultralow Power, Supply Voltage Monitor

1 Features

- Ultralow Supply Current: 150 nA (Typical)
- Operating Supply Voltage: 0.9 V to 6.5 V
- Valid Reset for V_{DD} > 0.6 V
- Push-Pull $\overline{RESET}$ Output
- Factory-Trimmed Reset Threshold Voltages
- Temperature Range: –40°C to 85°C
- Packages: 1-mm × 1-mm X2SON or 3-Pin SOT23

2 Applications

- Portable and Battery-Powered Equipment
- Metering
- Industrial Equipment
- Cell Phones
- Glucose Monitors
- Tablets
- Wearables

3 Description

The TPS3831 and TPS3839 devices (both referred to as *TPS383x*) are ultralow current (150 nA, typical), voltage supervisory circuits that monitor a single voltage. Both devices initiate an active-low reset signal whenever the V_{DD} supply voltage drops below the factory-trimmed reset threshold voltage. The reset output remains low for 200 ms (typical) after the V_{DD} voltage rises above the threshold voltage and hysteresis. These devices are designed to ignore fast transients on the VDD pin. The TPS3831 device includes a manual reset input that forces $\overline{RESET}$ low when $\overline{MR}$ is low.

The ultralow current consumption of 150 nA makes these voltage supervisors ideal for use in low-power and portable applications. The TPS383x devices are specified to have the correct output logic state for supply voltages down to 0.6 V.
The TPS383x devices feature precision factory-trimmed threshold voltages and extremely low-power operation. The TPS3831 device is available in a 4-pin, 1-mm × 1-mm (DQN) X2SON package. The TPS3839 device is available in a 3-pin SOT23 (DBZ) package or a 4-pin, 1-mm × 1-mm (DQN) X2SON package.
Device Information[(1)]

PART NUMBER	PACKAGE	PACKAGE SIZE (NOM)
TPS3831	X2SON (4)	1.00 mm x 1.00 mm
TPS3839	SOT-23 (3)	2.92 mm x 2.37 mm
	X2SON (4)	1.00 mm x 1.00 mm

4 Revision History

NOTE: Page numbers for previous revisions may differ from page numbers in the current version.

Changes from Revision C (February 2015) to Revision D   **Page**

- Changed µA to nA in document title 1
- Added TPS3839G25 to document 1
- Changed *Applications* section: moved *Metering* bullet to second in list, changed *Tablets* bullet, added *Wearables* bullet .. 1
- Changed first paragraph of *Description* section 1
- Changed *Device Information* table: changed Package Size column heading and value of SOT-23 row 1
- Added TPS3839G25 row to *Device Options* table 4
- Changed *Thermal Information* table 6
- Changed V_{IT-} and V_{hys} parameters in Electrical Characteristics table: changed test conditions, added TPS3839G25 rows 7

Changes from Revision B (April 2013) to Revision C   **Page**

- Added *ESD Ratings* table, *Feature Description* section, *Device Functional Modes*, *Application and Implementation* section, *Power Supply Recommendations* section, *Layout* section, *Device and Documentation Support* section, and *Mechanical, Packaging, and Orderable Information* section 1
- Changed title of data sheet 1
- Changed Operating Supply Voltage bullet from 0.6 V to 0.9 V 1
- Changed last sentence of *Description* section 1
- Changed front page figure 1
- Added $\overline{MR}$ parameter to *Absolute Maximum Ratings* 6
- Changed condition statement for *Electrical Characteristics* 7
- Changed $V_{(VO)}$ parameter symbol to V_{POR} 7
- Changed Figure 1 8
- Changed *Functional Block Diagram*; added hysteresis symbol to op amp 11
- Deleted *Typical Application Circuit* figure 13

Pin Functions

PIN				I/O	DESCRIPTION
NAME	NO.				
	TPS3839 (SOT23-3)	TPS3839 (X2SON)	TPS3831 (X2SON)		
GND	1	3	3	—	Ground
$\overline{MR}$	N/A	N/A	2	I	Manual reset. Pull this pin to a logic low to assert the $\overline{RESET}$ output. After the $\overline{MR}$ pin is deasserted, the $\overline{RESET}$ output deasserts after the reset delay (t_d) elapses.
NC	N/A	2	N/A	—	No internal connection.
$\overline{RESET}$	2	1	1	O	Active-low reset output. $\overline{RESET}$ has a push-pull output drive and is capable of directly driving input pins. $\overline{RESET}$ is low as long as V_{DD} remains below the factory threshold voltage, and until the delay time (t_d) elapses after V_{DD} rises above the threshold voltage.
Thermal pad	N/A	Available	Available	—	Connect to ground or to a floating copper plane for mechanical stability.
VDD	3	4	4	I	Supply voltage

7 Specifications

7.1 Absolute Maximum Ratings

over operating free-air temperature range, unless otherwise noted[1]

		MIN	MAX	UNIT
Voltage	VDD, $\overline{RESET}$	−0.3	7	V
	$\overline{MR}$	−0.3	V_{DD} + 0.3	V
Current	$\overline{RESET}$ pin	−10	10	mA
Temperature[2]	Operating ambient, T_A	−40	85	°C
	Storage, T_{stg}	−65	150	

(1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions* is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
(2) As a result of the low dissipated power in this device, the junction temperature is assumed to be equal to the ambient temperature.

7.2 ESD Ratings

		VALUE	UNIT
$V_{(ESD)}$ Electrostatic discharge	Human body model (HBM), per ANSI/ESDA/JEDEC JS-001[1]	±2000	V
	Charged device model (CDM), per JEDEC specification JESD22-C101[2]	±500	

(1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.
(2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

7.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)

		MIN	NOM	MAX	UNIT
V_{DD}	Input supply voltage	0.9		6.5	V
$V_{\overline{MR}}$	Manual reset pin voltage	0		V_{DD}	V
$V_{\overline{RESET}}$	$\overline{RESET}$ pin voltage	0		6.5	V
$I_{\overline{RESET}}$	$\overline{RESET}$ pin current	0		8	mA

7.4 Thermal Information

THERMAL METRIC[1]		TPS3839	TPS3831, TPS3839	UNIT
		DBZ (SOT23-3)	DQN (X2SON)	
		3 PINS	4 PINS	
$R_{\theta JA}$	Junction-to-ambient thermal resistance	346.6	216.1	°C/W
$R_{\theta JC(top)}$	Junction-to-case (top) thermal resistance	124.4	161.7	°C/W
$R_{\theta JB}$	Junction-to-board thermal resistance	78.9	162.1	°C/W
ψ_{JT}	Junction-to-top characterization parameter	11.5	5.1	°C/W
ψ_{JB}	Junction-to-board characterization parameter	77.3	161.7	°C/W
$R_{\theta JC(bot)}$	Junction-to-case (bottom) thermal resistance	N/A	123.0	°C/W

(1) For more information about traditional and new thermal metrics, see the *Semiconductor and IC Package Thermal Metrics* application report, SPRA953.
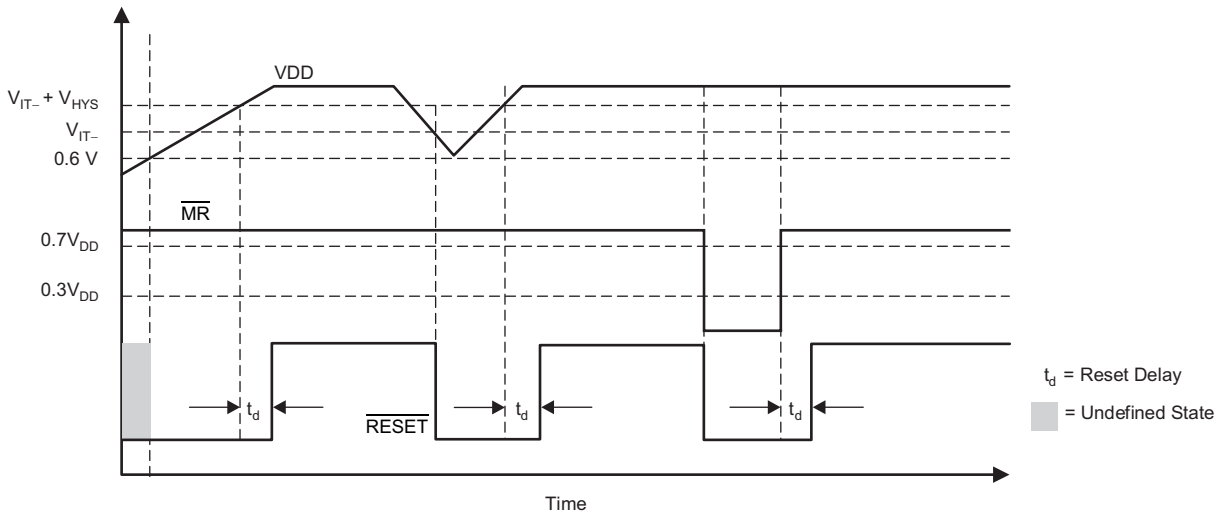

7.5 Electrical Characteristics

At T_A = –40°C to 85°C, 0.9 V < V_{DD} < 6.5 V, and C1 = 0.1 µF, unless otherwise noted. Typical values are at 25°C.

	PARAMETER	TEST CONDITIONS	MIN	TYP	MAX	UNIT
V_{DD}	Input supply voltage		0.9		6.5	V
$V_{(POR)}$	Minimum V_{DD} voltage for valid output	I_{OL} = 1 µA			0.6	V
I_{DD}	Supply current (into VDD pin)	Output not connected		150	500	nA

8 Detailed Description

8.1 Overview

The TPS3831 and TPS3839 are ultralow current voltage supervisory circuits that monitor the input supply voltage of these devices. Both devices assert an active-low reset whenever the V_{DD} supply voltage drops below the negative-going threshold voltage (V_{IT-}). The output, $\overline{RESET}$, remains asserted for approximately 200 ms after the V_{DD} voltage rises above the positive-going threshold voltage ($V_{IT-} + V_{hys}$). These devices are designed to ignore fast transients on the VDD pin.

The TPS3831 device includes a manual reset input ($\overline{MR}$) that can be used to force the $\overline{RESET}$ signal low, even if the supply voltage is above V_{IT-}.

8.2 Functional Block Diagram
8.3 Feature Description

8.3.1 VDD Transient Rejection

The TPS383x (TPS3831 and TPS3839) devices have built-in rejection of fast transients on the VDD pin. Transient rejection depends on both the duration and amplitude of the transient. Transient amplitude is measured from the bottom of the transient to the negative threshold voltage (V_{IT-}) of the device, as shown in Figure 12.
Figure 12. Voltage Transient Measurement

Submit Documentation Feedback   11

Feature Description (continued)

Figure 13 shows the relationship between the transient amplitude and duration required to trigger a reset. Any combination of duration and amplitude greater than that shown in Figure 13 generates a reset signal.
Figure 13. TPS3839 Transient Rejection

8.3.2 Manual Reset ($\overline{\text{MR}}$) Input (TPS3831 Only)

The manual reset ($\overline{\text{MR}}$) input allows a processor, or other logic devices, to initiate a reset (TPS3831 device only). A logic low (0.3 V_{DD}) on $\overline{\text{MR}}$ causes $\overline{\text{RESET}}$ to assert. After $\overline{\text{MR}}$ returns to a logic high and $V_{DD}$ is greater than the threshold voltage, $\overline{\text{RESET}}$ is deasserted after the reset delay time, t_d, elapses. $\overline{\text{MR}}$ is internally tied to VDD with a 20-kΩ resistor; therefore, this pin can be left unconnected if $\overline{\text{MR}}$ is not used. If a logic signal driving $\overline{\text{MR}}$ does not go fully to V_{DD}, some additional current draws into VDD as a result of the internal pullup resistor on $\overline{\text{MR}}$. To minimize current draw, a logic-level FET can be used, as shown in Figure 14.
Figure 14. Using a Logic-Level FET to Minimize Current Draw

8.4 Device Functional Modes

8.4.1 Normal Operation ($V_{DD} > V_{DD(min)}$)

When the voltage on VDD is greater than $V_{DD(min)}$, the $\overline{\text{RESET}}$ output corresponds to the voltage on the VDD pin relative to $V_{IT−}$.

8.4.2 Below $V_{DD(min)}$ ($V_{(POR)} < V_{DD} < V_{DD(min)}$

When the voltage on VDD is less than $V_{DD(min)}$ but greater than the power-on reset voltage ($V_{(POR)}$), the $\overline{\text{RESET}}$ output is asserted.

8.4.3 Below Power-On Reset ($V_{DD} < V_{(POR)}$

When the voltage on VDD is lower than the power-on reset voltage ($V_{(POR)}$), the $\overline{\text{RESET}}$ output is undefined. Do not rely on the $\overline{\text{RESET}}$ output for proper device function under this condition.

9 Applications and Implementation

NOTE
Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

9.1 Application Information

Low operating voltage and threshold options make the TPS383x devices well-suited for monitoring single-cell, alkaline-battery applications.

9.2 Typical Application

Figure 15 shows the TPS3839A09 used to disable a boost converter when the cell voltage reaches 0.9 V, which is the end of the discharge voltage for a single alkaline battery cell. When the cell voltage reaches 0.9 V, the TPS61261 enable pin is driven low. This setting disables the TPS61261 and places it in a low-current shutdown state. The combination of the TPS3839 and TPS61261 devices consumes only 250 nA (typical) from the discharged battery.
Figure 15. Disabled Boost Converter

9.2.1 Design Requirements

Table 1 lists the design requirements for Figure 15.

Table 1. Design Requirements and Results

DESIGN REQUIREMENTS	DESIGN RESULT		
	TPS3839A09	TPS61261	COMBINED
Input voltage range of 0.9 V to 1.7 V	0.9 V to 6.5 V	0.8 V to 4 V	0.9 V to 4 V
Shutdown current < 3 µA	0.5 µA (maximum)	1.5 µA (maximum)	2.0 µA (maximum)
Output voltage of 3.3 V	N/A	3.3 V	3.3 V
Output current of 50 mA	N/A	100 mA	100 mA
Switching frequency ≥ 1 MHz	N/A	2.5 MHz	2.5 MHz

9.2.2 Detailed Design Procedure

9.2.2.1 Input Capacitor

The TPS383x devices use a unique sampling scheme to maintain an extremely low average quiescent current of 150 nA. The TPS383x devices typically consume only approximately 100 nA of dc current. However, this current rises to approximately 15 µA for about 200 µs when the TPS383x devices sample the input voltage. If the source impedance back to the supply voltage is high, then the additional current during sampling may trigger a false reset as a result of the apparent voltage drop at VDD. For applications with high-impedance input supplies (including trace impedance), TI recommends adding a small 0.1-µF bypass capacitor near the TPS3839 VDD pin. This bypass capacitor effectively keeps the average current at 150 nA and reduces the effects of a high-impedance voltage source.

9.2.2.2 Bidirectional Reset Pins

Some devices have bidirectional reset pins that act both as an input and an output. For applications where the TPS383x devices drive a bidirectional reset pin, place a series resistor between the TPS383x output and the reset pin to protect against excessive current flow when both the TPS383x devices and the reset pin attempt to drive the reset line. Figure 16 shows the connection of the TPS3839K33 to a bidirectional reset pin of a microcontroller using a series resistor.
Figure 16. Connection to a Bidirectional Reset Pin

9.2.3 Application Curve
Figure 17. Supply Current vs Temperature

10 Power Supply Recommendations

These devices are designed to operate from an input supply with a voltage range between 0.9 V and 6.5 V. Use a low-impedance power supply to eliminate inaccuracies caused by the extra current during the input-voltage sampling discussed in the *Input Capacitor* section.

11 Layout

11.1 Layout Guidelines

Make sure the connection to the VDD pin is low impedance and able to carry 15 µA without a significant voltage drop. Place a 0.1-µF bypass capacitor near the VDD pin if the 15-µA sampling current causes too much voltage droop.

11.2 Layout Example
Figure 18. Recommended Layout

12 Device and Documentation Support

12.1 Device Support

12.1.1 Development Support

12.1.1.1 Evaluation Modules

Two evaluation modules (EVMs) are available to assist in the initial circuit performance evaluation using the TPS3831 and TPS3839. The TPS3831G33EVM-187 and TPS3839K33EVM-112 evaluation modules (and related user's guides) can be requested at the TI website through the product folders or purchased directly from the TI eStore.

12.1.1.2 Spice Models

Computer simulation of circuit performance using SPICE is often useful when analyzing the performance of analog circuits and systems. SPICE models for the TPS3831 and TPS3839 devices are available through each of the product folders under *Tools & Software*.

(1) The marketing status values are defined as follows:
ACTIVE: Product device recommended for new designs.
LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.
NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.
PREVIEW: Device has been announced but is not in production. Samples may or may not be available.
OBSOLETE: TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check http://www.ti.com/productcontent for the latest availability information and additional product content details.

TBD: The Pb-Free/Green conversion plan has not been defined.

Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

Important Information and Disclaimer: The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

PACKAGE MATERIALS INFORMATION

TAPE AND REEL INFORMATION

REEL DIMENSIONS

TAPE DIMENSIONS

A0	Dimension designed to accommodate the component width
B0	Dimension designed to accommodate the component length
K0	Dimension designed to accommodate the component thickness
W	Overall width of the carrier tape
P1	Pitch between successive cavity centers

QUADRANT ASSIGNMENTS FOR PIN 1 ORIENTATION IN TAPE

*All dimensions are nominal

Images above are just a representation of the package family, actual package may vary.
Refer to the product data sheet for package details.

4210367/F
4215302/E 12/2016

NOTES:

1. All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.
3. The package thermal pad must be soldered to the printed circuit board for optimal thermal and mechanical performance.
4. Features may not exist. Recommend use of pin 1 marking on top of package for orientation purposes.
5. Shape of exposed side leads may differ.
6. Number and location of exposed tie bars may vary.

7. This package is designed to be soldered to a thermal pad on the board. For more information, see Texas Instruments literature number SLUA271 (www.ti.com/lit/slua271) .

8. If any vias are implemented, it is recommended that vias under paste be filled, plugged or tented.

IMPORTANT NOTICE

Texas Instruments Incorporated (TI) reserves the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete.

TI's published terms of sale for semiconductor products (http://www.ti.com/sc/docs/stdterms.htm) apply to the sale of packaged integrated circuit products that TI has qualified and released to market. Additional terms may apply to the use or sale of other types of TI products and services.

Reproduction of significant portions of TI information in TI data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such reproduced documentation. Information of third parties may be subject to additional restrictions. Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyers and others who are developing systems that incorporate TI products (collectively, "Designers") understand and agree that Designers remain responsible for using their independent analysis, evaluation and judgment in designing their applications and that Designers have full and exclusive responsibility to assure the safety of Designers' applications and compliance of their applications (and of all TI products used in or for Designers' applications) with all applicable regulations, laws and other applicable requirements. Designer represents that, with respect to their applications, Designer has all the necessary expertise to create and implement safeguards that (1) anticipate dangerous consequences of failures, (2) monitor failures and their consequences, and (3) lessen the likelihood of failures that might cause harm and take appropriate actions. Designer agrees that prior to using or distributing any applications that include TI products, Designer will thoroughly test such applications and the functionality of such TI products as used in such applications.

TI's provision of technical, application or other design advice, quality characterization, reliability data or other services or information, including, but not limited to, reference designs and materials relating to evaluation modules, (collectively, "TI Resources") are intended to assist designers who are developing applications that incorporate TI products; by downloading, accessing or using TI Resources in any way, Designer (individually or, if Designer is acting on behalf of a company, Designer's company) agrees to use any particular TI Resource solely for this purpose and subject to the terms of this Notice.

TI's provision of TI Resources does not expand or otherwise alter TI's applicable published warranties or warranty disclaimers for TI products, and no additional obligations or liabilities arise from TI providing such TI Resources. TI reserves the right to make corrections, enhancements, improvements and other changes to its TI Resources. TI has not conducted any testing other than that specifically described in the published documentation for a particular TI Resource.

Designer is authorized to use, copy and modify any individual TI Resource only in connection with the development of applications that include the TI product(s) identified in such TI Resource. NO OTHER LICENSE, EXPRESS OR IMPLIED, BY ESTOPPEL OR OTHERWISE TO ANY OTHER TI INTELLECTUAL PROPERTY RIGHT, AND NO LICENSE TO ANY TECHNOLOGY OR INTELLECTUAL PROPERTY RIGHT OF TI OR ANY THIRD PARTY IS GRANTED HEREIN, including but not limited to any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information regarding or referencing third-party products or services does not constitute a license to use such products or services, or a warranty or endorsement thereof. Use of TI Resources may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

TI RESOURCES ARE PROVIDED "AS IS" AND WITH ALL FAULTS. TI DISCLAIMS ALL OTHER WARRANTIES OR REPRESENTATIONS, EXPRESS OR IMPLIED, REGARDING RESOURCES OR USE THEREOF, INCLUDING BUT NOT LIMITED TO ACCURACY OR COMPLETENESS, TITLE, ANY EPIDEMIC FAILURE WARRANTY AND ANY IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, AND NON-INFRINGEMENT OF ANY THIRD PARTY INTELLECTUAL PROPERTY RIGHTS. TI SHALL NOT BE LIABLE FOR AND SHALL NOT DEFEND OR INDEMNIFY DESIGNER AGAINST ANY CLAIM, INCLUDING BUT NOT LIMITED TO ANY INFRINGEMENT CLAIM THAT RELATES TO OR IS BASED ON ANY COMBINATION OF PRODUCTS EVEN IF DESCRIBED IN TI RESOURCES OR OTHERWISE. IN NO EVENT SHALL TI BE LIABLE FOR ANY ACTUAL, DIRECT, SPECIAL, COLLATERAL, INDIRECT, PUNITIVE, INCIDENTAL, CONSEQUENTIAL OR EXEMPLARY DAMAGES IN CONNECTION WITH OR ARISING OUT OF TI RESOURCES OR USE THEREOF, AND REGARDLESS OF WHETHER TI HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

Unless TI has explicitly designated an individual product as meeting the requirements of a particular industry standard (e.g., ISO/TS 16949 and ISO 26262), TI is not responsible for any failure to meet such industry standard requirements.

Where TI specifically promotes products as facilitating functional safety or as compliant with industry functional safety standards, such products are intended to help enable customers to design and create their own applications that meet applicable functional safety standards and requirements. Using products in an application does not by itself establish any safety features in the application. Designers must ensure compliance with safety-related requirements and standards applicable to their applications. Designer may not use any TI products in life-critical medical equipment unless authorized officers of the parties have executed a special contract specifically governing such use. Life-critical medical equipment is medical equipment where failure of such equipment would cause serious bodily injury or death (e.g., life support, pacemakers, defibrillators, heart pumps, neurostimulators, and implantables). Such equipment includes, without limitation, all medical devices identified by the U.S. Food and Drug Administration as Class III devices and equivalent classifications outside the U.S.

TI may expressly designate certain products as completing a particular qualification (e.g., Q100, Military Grade, or Enhanced Product). Designers agree that it has the necessary expertise to select the product with the appropriate qualification designation for their applications and that proper product selection is at Designers' own risk. Designers are solely responsible for compliance with all legal and regulatory requirements in connection with such selection.

Designer will fully indemnify TI and its representatives against any damages, costs, losses, and/or liabilities arising out of Designer's non-compliance with the terms and provisions of this Notice.
