

TPS720 350 mA, Ultra-Low V_{IN} , RF Low-Dropout Linear Regulator With Bias Pin

1 Features

- 350-mA High-Performance LDO
- Low Quiescent Current: 38 μ A
- Excellent Load Transient Response:
 ± 15 mV for $I_{LOAD} = 0$ mA to 350 mA in 1 μ s
- Excellent Line Transient Response:
 $\Delta V_{OUT} = \pm 2$ mV for $\Delta V_{BIAS} = \pm 600$ mV in 1 μ s
 $\Delta V_{OUT} = \pm 200$ μ V for $\Delta V_{IN} = \pm 400$ mV in 1 μ s
- Low Noise: 48 μ V_{RMS} (10 Hz to 100 kHz)
- 80 dB V_{IN} PSRR (10 Hz to 10 kHz)
- 70 dB V_{BIAS} PSRR (10 Hz to 10 kHz)
- Fast Start-Up Time: 140 μ s
- Built-In Soft-Start With Monotonic V_{OUT} Rise and Start-Up Current Limited to 100 mA + I_{LOAD}
- Overcurrent and Thermal Protection
- Low Dropout: 110 mV at $I_{LOAD} = 350$ mA
- Stable with 2.2- μ F Output Capacitor
- Available in 1.33 mm \times 0.96 mm DSBGA-5 and 2 mm \times 2 mm SON-6 Packages

2 Applications

- Digital Cameras
- Cellular Camera Phones
- Wireless LAN
- Handheld Products

3 Description

The TPS720 family of dual rail, low-dropout linear regulators (LDOs) offers outstanding ac performance (PSRR, load and line transient response), while consuming a very low quiescent current of 38 μ A.

The V_{BIAS} rail that powers the control circuit of the LDO draws very low current (on the order of the quiescent current of the LDO) and can be connected to any power supply that is equal to or greater than 1.4 V above the output voltage. The main power path is through V_{IN} , which can be a lower voltage than V_{BIAS} ; it can be as low as $V_{OUT} + V_{DO}$, increasing the efficiency of the solution in many power-sensitive applications. For example, V_{IN} can be an output of a high-efficiency, DC-DC step-down regulator.

The TPS720 supports a novel feature in which the output of the LDO regulates under light loads when the IN pin is left floating. The light-load drive current is sourced from V_{BIAS} under this condition. This feature is particularly useful in power-saving applications where the DC-DC converter connected to the IN pin is disabled but the LDO is still required to regulate the voltage to a light load.

The TPS720 is stable with ceramic capacitors and uses an advanced BICMOS fabrication process that yields a dropout of 110 mV at a 350-mA output load. The TPS720 has the unique feature of providing a monotonic V_{OUT} rise (overshoot limited to 3%) with V_{IN} inrush current limited to 100 mA + I_{LOAD} with an output capacitor of 2.2 μ F.

The TPS720 uses a precision voltage reference and feedback loop to achieve overall accuracy of 2% over load, line, process, and temperature extremes. An ultra-small DSBGA package makes the TPS720 ideal for handheld applications. The TPS720 is also available in a SON-8 package. This family of devices is fully specified over the temperature range of $T_J = -40^\circ\text{C}$ to 125°C .

Device Information⁽¹⁾

| PART NUMBER | PACKAGE | BODY SIZE (NOM) |
|-------------|-----------|--------------------------|
| TPS720 | DSBGA (5) | 1.36 mm \times 0.96 mm |
| | SON (6) | 2.00 mm \times 2.00 mm |

(1) For all available packages, see the orderable addendum at the end of the data sheet.

Pin Functions

| PIN | | | I/O | DESCRIPTION |
|------|-----|-----|-----|--|
| NAME | DRV | YZU | | |
| OUT | 1 | A3 | O | Output pin. A 2.2- μ F ceramic capacitor is connected from this pin to ground, for stability and to provide load transients. See Input and Output Capacitor Requirements . |
| NC | 2 | — | — | No connection. |
| EN | 3 | C3 | I | Enable pin. A logic high signal on this pin turns the device on and regulates the voltage from IN to OUT. A logic low on this pin turns off the device. |
| BIAS | 4 | C1 | I | Bias supply pin. TI recommends bypassing this input with a ceramic capacitor to ground for better transient performance. See Input and Output Capacitor Requirements . |
| GND | 5 | B2 | — | Ground pin. |
| IN | 6 | A1 | I | Input pin. This pin can be a maximum of 4.5 V; V_{IN} must not exceed V_{BIAS} . Bypass this input with a ceramic capacitor to ground. See Input and Output Capacitor Requirements . |

6 Specifications

6.1 Absolute Maximum Ratings

At $T_J = -40^\circ\text{C}$ to 125°C (unless otherwise noted). All voltages are with respect to GND. ⁽¹⁾

| | | MIN | MAX | UNIT |
|----------------------|------------------------------------|---|--------------------------------|------------------|
| $V_{IN}^{(2)}$ | Input voltage (steady-state) | -0.3 | V_{BIAS} or 5 ⁽³⁾ | V |
| $V_{IN_PEAK}^{(4)}$ | Peak transient input | | 5.5 | V |
| V_{BIAS} | Bias voltage | -0.3 | 6 | V |
| V_{EN} | Enable voltage | -0.3 | 6 | V |
| V_{OUT} | Output voltage | -0.3 | 5 | V |
| I_{OUT} | Peak output current | Internally limited | | |
| | Output short circuit duration | Indefinite | | |
| P_{DISS} | Total continuous power dissipation | See Thermal Information | | |
| T_J | Operating junction temperature | -55 | 125 | $^\circ\text{C}$ |
| T_{stg} | Storage temperature | -55 | 150 | $^\circ\text{C}$ |

- (1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions*. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) To ensure proper operation of the device it is necessary that $V_{IN} \leq V_{BIAS}$ under all conditions.
- (3) Whichever is less.
- (4) For durations no longer than 1ms each, for a total of no more than 1000 occurrences over the lifetime of the device.

6.2 ESD Ratings

| | | VALUE | UNIT |
|-------------------------------------|--|-------|------|
| $V_{(ESD)}$ Electrostatic discharge | Human-body model (HBM), per ANSI/ESDA/JEDEC JS-001 ⁽¹⁾ | ±2000 | V |
| | Charged-device model (CDM), per JEDEC specification JESD22-C101 ⁽²⁾ | ±500 | |
| | Machine model (MM) | ±100 | |

- (1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.
 (2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

6.3 Recommended Operating Conditions

over operating junction-air temperature range (unless otherwise noted)

| | | MIN | NOM | MAX | UNIT |
|--------------------------|------------------------------|--|-----|----------------------------------|------|
| V_{IN} | Input voltage (steady-state) | 1.1 | | V_{BIAS} or 4.5 ⁽¹⁾ | V |
| V_{BIAS} | Bias voltage | 2.5 or or $V_{OUT} + 1.4$ ⁽²⁾ | | 5.5 | V |
| V_{OUT} | Output voltage | 0.9 | | 3.6 | V |
| I_{OUT} | Peak output current | 0 | | 350 | mA |
| C_{IN} | Input capacitance | | 1 | | μF |
| C_{BIAS} | Bias capacitance | | 0.1 | | μF |
| C_{OUT} ⁽³⁾ | Output capacitance | 2.2 | | | μF |

- (1) Whichever is less
 (2) Whichever is greater
 (3) Maximum ESR should be less than 250 mΩ.

6.4 Thermal Information

| THERMAL METRIC ⁽¹⁾ | TPS720 | | UNIT | |
|-------------------------------|--|------------|-------|------|
| | DRV (SON) | YZU (WSCP) | | |
| | 6 PINS | 5 PINS | | |
| $R_{\theta JA}$ | Junction-to-ambient thermal resistance | 66.5 | 144.9 | °C/W |
| $R_{\theta JC(top)}$ | Junction-to-case (top) thermal resistance | 86.2 | 1.1 | °C/W |
| $R_{\theta JB}$ | Junction-to-board thermal resistance | 36.1 | 27.5 | °C/W |
| ψ_{JT} | Junction-to-top characterization parameter | 1.7 | 4.1 | °C/W |
| ψ_{JB} | Junction-to-board characterization parameter | 36.6 | 27.4 | °C/W |
| $R_{\theta JC(bot)}$ | Junction-to-case (bottom) thermal resistance | 7.4 | N/A | °C/W |

- (1) For more information about traditional and new thermal metrics, see the *Semiconductor and IC Package Thermal Metrics* application report, [SPRA953](#).

6.5 Electrical Characteristics

Over operating temperature range ($T_J = -40^\circ\text{C}$ to 125°C), $V_{BIAS} = (V_{OUT} + 1.4\text{ V})$ or 2.5 V (whichever is greater); $V_{IN} \geq V_{OUT} + 0.5\text{ V}$, $I_{OUT} = 1\text{ mA}$, $V_{EN} = 1.1\text{ V}$, $C_{OUT} = 2.2\text{ }\mu\text{F}$, unless otherwise noted. Typical values are at $T_J = 25^\circ\text{C}$.

| PARAMETER | | TEST CONDITIONS | MIN | TYP | MAX | UNIT | |
|----------------------------------|---|--|--|-----------|----------------------------------|-------------------------|----|
| V_{IN} | Input voltage | | 1.1 ⁽¹⁾ | | V_{BIAS} or 4.5 ⁽²⁾ | V | |
| V_{BIAS} | Bias voltage | | 2.5 | | 5.5 | V | |
| V_{OUT} ⁽³⁾ | Output voltage ⁽⁴⁾ | | 0.9 | | 3.6 | V | |
| | Output accuracy | Nominal | $T_J = 25^\circ\text{C}$ | -3 | | 3 | mV |
| | | Over V_{BIAS} , V_{IN} , I_{OUT} , $T_J = -40^\circ\text{C}$ to 125°C | $V_{OUT} + 1.4\text{ V} \leq V_{BIAS} \leq 5.5\text{ V}$, $V_{OUT} + 0.5\text{ V} \leq V_{IN} \leq 4.5\text{ V}$, $0\text{ mA} \leq I_{OUT} \leq 350\text{ mA}$ | -2% | | 2% | |
| | | Over V_{BIAS} , V_{IN} , I_{OUT} , $T_J = -40^\circ\text{C}$ to 125°C | DRV package only: $V_{OUT} + 1.4\text{ V} \leq V_{BIAS} \leq 5.5\text{ V}$, $V_{OUT} + 0.5\text{ V} \leq V_{IN} \leq 4.5\text{ V}$, $0\text{ mA} \leq I_{OUT} \leq 350\text{ mA}$, $V_{OUT} < 1.2\text{ V}$ | -25 | | 25 | mV |
| | | Over V_{BIAS} , V_{IN} , I_{OUT} , $T_J = -10^\circ\text{C}$ to 85°C | YZU package only: $V_{OUT} + 1.4\text{ V} \leq V_{BIAS} \leq 5.5\text{ V}$, $V_{OUT} + 0.5\text{ V} \leq V_{IN} \leq 4.5\text{ V}$, $0\text{ mA} \leq I_{OUT} \leq 350\text{ mA}$, $1.6\text{ V} \leq V_{OUT} \leq 3.3\text{ V}$ | -1% | | 1% | |
| V_{IN} floating | $V_{OUT} + 1.4\text{ V} \leq V_{BIAS} \leq 5.5\text{ V}$, $0\text{ }\mu\text{A} \leq I_{OUT} \leq 500\text{ }\mu\text{A}$ | | $\pm 1\%$ | | | | |
| $\Delta V_{OUT}/\Delta V_{IN}$ | V_{IN} line regulation | $V_{IN} = (V_{OUT} + 0.5\text{ V})$ to 4.5 V , $I_{OUT} = 1\text{ mA}$ | | 16 | | $\mu\text{V}/\text{V}$ | |
| $\Delta V_{OUT}/\Delta V_{BIAS}$ | V_{BIAS} line regulation | $V_{BIAS} = (V_{OUT} + 1.4\text{ V})$ or 2.5 V (whichever is greater) to 5.5 V , $I_{OUT} = 1\text{ mA}$ | | 16 | | $\mu\text{V}/\text{V}$ | |
| | V_{IN} line transient | $\Delta V_{IN} = 400\text{ mV}$, $t_{RISE} = t_{FALL} = 1\text{ }\mu\text{s}$ | | ± 200 | | μV | |
| | V_{BIAS} line transient | $\Delta V_{BIAS} = 600\text{ mV}$, $t_{RISE} = t_{FALL} = 1\text{ }\mu\text{s}$ | | ± 0.8 | | mV | |

| | Load transient | $0\text{ mA} \leq I_{OUT} \leq 350\text{ mA}$, $t_{RISE} = t_{FALL} = 1\text{ }\mu\text{s}$ | | ± 15 | | mV | |
| V_{DO_IN} | V_{IN} dropout voltage ⁽⁵⁾ | $V_{IN} = V_{OUT(NOM)} - 0.1\text{ V}$, $(V_{BIAS} - V_{OUT(NOM)}) = 1.4\text{ V}$, $I_{OUT} = 350\text{ mA}$ | | 110 | 200 | mV | |
| V_{DO_BIAS} | V_{BIAS} dropout voltage ⁽⁶⁾ | $V_{IN} = V_{OUT(NOM)} + 0.3\text{ V}$, $I_{OUT} = 350\text{ mA}$ | | 1.09 | 1.4 | V | |
| I_{CL} | Output current limit | $V_{OUT} = 0.9 \times V_{OUT(NOM)}$ | 420 | 525 | 800 | mA | |
| I_{GND} | Ground pin current | $I_{OUT} = 100\text{ }\mu\text{A}$ | | 38 | | μA | |
| | | $I_{OUT} = 0\text{ mA}$ to 350 mA | | 54 | 80 | | |
| I_{SHDN} | Shutdown current (I_{GND}) | $V_{EN} \leq 0.4\text{ V}$, $T_J = -40^\circ\text{C}$ to 85°C | | 0.5 | 2 | μA | |
| PSRR | V_{IN} power-supply rejection ratio | $V_{IN} - V_{OUT} \geq 0.5\text{ V}$, $V_{BIAS} = V_{OUT} + 1.4\text{ V}$, $I_{OUT} = 350\text{ mA}$ | $f = 10\text{ Hz}$ | | 85 | dB | |
| | | | $f = 100\text{ Hz}$ | | 85 | | |
| | | | $f = 1\text{ kHz}$ | | 85 | | |
| | | | $f = 10\text{ kHz}$ | | 80 | | |
| | | | $f = 100\text{ kHz}$ | | 70 | | |
| | | | $f = 1\text{ MHz}$ | | 50 | | |

(1) Performance specifications are ensured up to a minimum $V_{IN} = V_{OUT} + 0.5\text{ V}$.

(2) Whichever is less.

(3) Minimum $V_{BIAS} = (V_{OUT} + 1.4\text{ V})$ or 2.5 V (whichever is greater) and $V_{IN} = V_{OUT} + 0.5\text{ V}$.

(4) V_O nominal value is factory programmable through the onchip EEPROM.

(5) Measured for devices with $V_{OUT(NOM)} \geq 1.2\text{ V}$.

(6) $V_{BIAS} - V_{OUT}$ with $V_{OUT} = V_{OUT(NOM)} - 0.1\text{ V}$. Measured for devices with $V_{OUT(NOM)} \geq 1.8\text{ V}$.

Electrical Characteristics (continued)

Over operating temperature range ($T_J = -40^{\circ}\text{C}$ to 125°C), $V_{\text{BIAS}} = (V_{\text{OUT}} + 1.4 \text{ V})$ or 2.5 V (whichever is greater); $V_{\text{IN}} \geq V_{\text{OUT}} + 0.5 \text{ V}$, $I_{\text{OUT}} = 1 \text{ mA}$, $V_{\text{EN}} = 1.1 \text{ V}$, $C_{\text{OUT}} = 2.2 \mu\text{F}$, unless otherwise noted. Typical values are at $T_J = 25^{\circ}\text{C}$.

Typical values are at $T_J = 25^{\circ}\text{C}$.

7 Detailed Description

7.1 Overview

The TPS720 belongs to a family of new generation LDO regulators that use innovative circuitry to achieve ultra-wide bandwidth and high loop gain, resulting in extremely high PSRR (up to 1 MHz) at very low headroom ($V_{IN} - V_{OUT}$). The implementation of the BIAS pin on the TPS720 vastly improves efficiency of low V_{OUT} applications by allowing the use of a preregulated, low-voltage input supply. The TPS720 supports a novel feature in which the output of the LDO regulates under light loads (<500 μ A) when the IN pin is left floating. The light-load drive current is sourced from V_{BIAS} under this condition. This feature is particularly useful in power-saving applications where the DC-DC converter connected to the IN pin is disabled but the LDO is still required to regulate the voltage to a light load. These features, combined with low noise, low ground pin current, and ultra-small packaging, make this device ideal for portable applications. This family of regulators offers sub-bandgap output voltages, current limit and thermal protection, and is fully specified from -40°C to 125°C .

7.2 Functional Block Diagram

7.3 Feature Description

7.3.1 Internal Current Limit

The TPS720 internal current limits help protect the regulator during fault conditions. During current limit, the output sources a fixed amount of current that is largely independent of output voltage. In such a case, the output voltage is not regulated, and is $V_{OUT} = I_{LIMIT} \times R_{LOAD}$. The NMOS pass transistor dissipates $(V_{IN} - V_{OUT}) \times I_{LIMIT}$ until thermal shutdown is triggered and the device is turned off. As the device cools down, it is turned on by the internal thermal shutdown circuit. If the fault condition continues, the device cycles between current limit and thermal shutdown. See the [Thermal Considerations](#) section for more details.

The NMOS pass element in the TPS720 has a built-in body diode that conducts current when the voltage at OUT exceeds the voltage at IN. This current is not limited, so if extended reverse voltage operation is anticipated, external limiting to 5% of rated output current is recommended.

7.3.2 Inrush Current Limit

The TPS720 family of LDO regulators implement a novel inrush current limit circuit architecture: the current drawn through the IN pin is limited to a finite value. This $I_{INRUSHLIMIT}$ charges the output to its final voltage. All the current drawn through V_{IN} goes to charge the output capacitance when the load is disconnected. The following equation shows the inrush current limit performed by the circuit:

$$I_{INRUSHLIMIT}(A) = C_{OUT}(\mu F) \times 0.0454545 (V/\mu s) + I_{LOAD}(A) \quad (1)$$

Feature Description (continued)

Assuming a C_{OUT} of 2.2 μF with the load disconnected (that is, $I_{LOAD} = 0$) the $I_{INRUSHLIMIT}$ is calculated to be 100 mA. The inrush current charges the LDO output capacitor. If the output of the LDO regulates to 1.3 V, then the LDO charges the output capacitor to the final output value in approximately 28.6 μs .

Another consideration is when a load is connected to the output of an LDO. The connected load tries to steer a portion of the current away from V_{OUT} . The TPS720 inrush current limit circuit employs a new technique that supplies not only the $I_{INRUSHLIMIT}$, but also the additional current needed by the load. If $I_{LOAD} = 350$ mA, then the $I_{INRUSHLIMIT}$ calculates to be approximately 450 mA (from [Equation 1](#)).

7.3.3 Shutdown

The enable pin (EN) is active high and is compatible with standard and low voltage, TTL-CMOS levels. When shutdown capability is not required, EN can be connected to the IN pin.

7.3.4 Undervoltage Lockout (UVLO)

The TPS720 uses an undervoltage lock-out circuit on the BIAS pin to keep the output shut off until the internal circuitry is operating properly. The UVLO circuit has a deglitch feature so that it typically ignores undershoot transients on the input if they are less than 50- μs duration.

7.4 Device Functional Modes

Driving the EN pin over 1.1 V turns on the regulator. Driving the EN pin below 0.4 V causes the regulator to enter shutdown mode. In shutdown, the current consumption of the device is reduced to 500 nA, typically.

8 Application and Implementation

NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

8.1 Application Information

8.1.1 Input and Output Capacitor Requirements

Although an input capacitor is not required for stability on the IN pin, it is good analog design practice to connect a 0.1- μF to 1- μF low equivalent series resistance (ESR) capacitor across the IN pin input supply near the regulator. This capacitor counteracts reactive input sources and improves transient response, noise rejection, and ripple rejection. A higher-value capacitor may be necessary if large, fast rise-time load transients are anticipated, or if the device is located close to the power source. If source impedance is not sufficiently low, a 0.1- μF input capacitor may be necessary to ensure stability.

The BIAS pin does not require an input capacitor because it does not source high currents. However, if source impedance is not sufficiently low, then TI recommends a small 0.1- μF bypass capacitor.

The TPS720 is designed to be stable with standard ceramic capacitors with values of 2.2 μF or larger at the output. X5R- and X7R-type capacitors are best because they have minimal variation in value and ESR over temperature. Maximum ESR should be less than 250 m Ω .

8.1.2 Output Regulation With IN Pin Floating

The TPS720 supports a novel feature in which the output of the LDO regulates under light loads when the IN pin is left floating. Under normal conditions, when the IN pin is connected to a power source, the BIAS pin draws only tens of milliamperes. However, when the IN pin is floating, an innovative circuit is used that allows a maximum current of 500 μA to be drawn by the load through the BIAS pin, while maintaining the output in regulation. This feature is particularly useful in power-saving applications where a DC-DC converter connected to the IN pin is disabled, but the LDO is required to regulate the output voltage to a light load.

[Figure 27](#) shows an application example where a microcontroller is not turned off (to maintain the state of the internal memory), but where the regulated supply (shown as the TPS62xxx) is turned off to reduce power. In this case, the TPS720 BIAS pin provides sufficient load current to maintain a regulated voltage to the microcontroller.

Figure 27. Example of Floating IN Pin Regulation

Application Information (continued)

8.1.3 Dropout Voltage

The TPS720 uses a NMOS pass transistor to achieve low dropout. When $(V_{IN} - V_{OUT})$ is less than the dropout voltage (V_{DO}), the NMOS pass device is in the linear region of operation and the input-to-output resistance is the $R_{DS(ON)}$ of the NMOS pass element. V_{DO} approximately scales with output current because the NMOS device behaves as a resistor in dropout.

As with any linear regulator, PSRR and transient response are degraded as $(V_{IN} - V_{OUT})$ approaches dropout. This effect is shown in [Figure 19](#).

8.1.4 Transient Response

As with any regulator, increasing the size of the output capacitor reduces overshoot and undershoot magnitude but increases duration of the transient response.

8.1.5 Minimum Load

The TPS720 is stable with no output load. Traditional LDOs suffer from low loop gain at very light output loads. The TPS720 employs an innovative, low-current mode circuit under very light or no-load conditions, resulting in improved output voltage regulation performance reduced to zero output current.

8.2 Typical Application

Figure 28. Typical Application Schematic

8.2.1 Design Requirements

[Table 1](#) shows the parameters for this design example.

Table 1. Design Parameters

| DESIGN PARAMETER | EXAMPLE VALUE |
|------------------|----------------------------|
| V_{IN} | 1.8 V |
| V_{BIAS} | 2.7 V |
| V_{OUT} | 1.3 V |
| I_{OUT} | 10-mA typical, 350-mA peak |

8.2.2 Detailed Design Procedures

A small-size solution is desired, so select the minimum recommended component size. Set $C_{IN} = 1 \mu\text{F}$, $C_{BIAS} = 100 \text{ nF}$, $C_{OUT} = 2.2 \mu\text{F}$.

8.2.3 Application Curves

9 Power Supply Recommendations

The input supply and bias supply for the LDO must be within its recommended operating conditions and provide adequate headroom for the device to have a regulated output. The minimum capacitor requirements must be met, and if the input supply is noisy, then additional input capacitors with low ESR can help improve transient performance.

10 Layout

10.1 Layout Guidelines

To improve AC performance such as PSRR, output noise, and transient response, TI recommends designing the board with separate ground planes for V_{IN} and V_{OUT} , with the ground plane connected only at the GND pin of the device. In addition, the ground connection for the output capacitor should be connected directly to the GND pin of the device. High equivalent series resistance (ESR) capacitors may degrade PSRR. The BIAS pin draws very little current and can be routed as a signal (make sure to shield it from high-frequency coupling).

10.2 Layout Example

Figure 33. Recommended Layout

10.3 Thermal Considerations

Thermal protection disables the output when the junction temperature rises to approximately 160°C, allowing the device to cool. When the junction temperature cools to approximately 140°C, the output circuitry is again enabled. Depending on power dissipation, thermal resistance, and ambient temperature, the thermal protection circuit may cycle on and off. This cycling limits the dissipation of the regulator, protecting it from damage as a result of overheating.

Thermal Considerations (continued)

Any tendency to activate the thermal protection circuit indicates excessive power dissipation or an inadequate heatsink. For reliable operation, junction temperature should be limited to 125°C maximum. To estimate the margin of safety in a complete design (including heatsink), increase the ambient temperature until the thermal protection is triggered; use worst-case loads and signal conditions. For good reliability, thermal protection should trigger at least 35°C above the maximum expected ambient condition of the particular application. This configuration produces a worst-case junction temperature of 125°C at the highest expected ambient temperature and worst-case load.

The internal protection circuitry of the TPS720 has been designed to protect against overload conditions. It was not intended to replace proper heatsinking. Continuously running the TPS720 into thermal shutdown degrades device reliability.

10.4 Power Dissipation

The ability to remove heat from the die is different for each package type, presenting different considerations in the printed-circuit-board (PCB) layout. The PCB area around the device that is free of other components moves the heat from the device to the ambient air. Performance data for JEDEC low- and high-K boards are given in the [Thermal Information](#) table. Using heavier copper increases the effectiveness in removing heat from the device. The addition of plated through-holes to heat-dissipating layers also improves the heatsink effectiveness.

Power dissipation depends on input voltage and load conditions. Power dissipation (P_D) is equal to the product of the output current times the voltage drop across the output pass element (V_{IN} to V_{OUT}), as shown in [Equation 2](#):

$$P_D = (V_{IN} - V_{OUT}) \times I_{OUT} \quad (2)$$

11 Device and Documentation Support

11.1 Device Support

11.1.1 Development Support

11.1.1.1 Evaluation Module

An evaluation module (EVM) is available to assist in the initial circuit performance evaluation using the TPS720. The [TPS720xxDRVEVM evaluation module](#) (and [related user guide](#)) can be requested at the Texas Instruments website through the product folders or purchased directly from the [TI eStore](#).

11.1.2 Device Nomenclature

Table 2. Device Nomenclature⁽¹⁾⁽²⁾

| PRODUCT | V _{OUT} |
|-------------|---|
| TPS720xx(x) | <p>xx(x) is the nominal output voltage. For output voltages with a resolution of 100 mV, two digits are used in the ordering number; otherwise, three digits are used (for example, 28 = 2.8 V; 125 = 1.25 V).</p> <p>yy is the package designator.</p> <p>z is the package quantity. R is for reel (3000 pieces), T is for tape (250 pieces).</p> |

- (1) For the most current package and ordering information see the Package Option Addendum at the end of this document, or visit the device product folder on www.ti.com.
- (2) Output voltages from 0.9 V to 3.6 V in 50-mV increments are available. Contact the factory for details and availability.

11.2 Documentation Support

11.2.1 Related Documentation

For related documentation see the following:

(1) The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSOLETE: TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

TBD: The Pb-Free/Green conversion plan has not been defined.

Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

MECHANICAL DATA

DRV (S-PWSON-N6)

PLASTIC SMALL OUTLINE NO-LEAD

4206925/E 10/10

- NOTES:
- All linear dimensions are in millimeters. Dimensioning and tolerancing per ASME Y14.5M-1994.
 - This drawing is subject to change without notice.
 - Small Outline No-Lead (SON) package configuration.
-  The package thermal pad must be soldered to the board for thermal and mechanical performance. See the Product Data Sheet for details regarding the exposed thermal pad dimensions.

THERMAL PAD MECHANICAL DATA

DRV (S-PWSON-N6)

PLASTIC SMALL OUTLINE NO-LEAD

THERMAL INFORMATION

This package incorporates an exposed thermal pad that is designed to be attached directly to an external heatsink. The thermal pad must be soldered directly to the printed circuit board (PCB). After soldering, the PCB can be used as a heatsink. In addition, through the use of thermal vias, the thermal pad can be attached directly to the appropriate copper plane shown in the electrical schematic for the device, or alternatively, can be attached to a special heatsink structure designed into the PCB. This design optimizes the heat transfer from the integrated circuit (IC).

For information on the Quad Flatpack No-Lead (QFN) package and its advantages, refer to Application Report, QFN/SON PCB Attachment, Texas Instruments Literature No. SLUA271. This document is available at www.ti.com.

The exposed thermal pad dimensions for this package are shown in the following illustration.

NOTE: All linear dimensions are in millimeters

DRV (S-PWSON-N6)

PLASTIC SMALL OUTLINE NO-LEAD

- NOTES:
- A. All linear dimensions are in millimeters.
 - B. This drawing is subject to change without notice.
 - C. Publication IPC-7351 is recommended for alternate designs.
 - D. This package is designed to be soldered to a thermal pad on the board. Refer to Application Note, QFN/SON PCB Attachment, Texas Instruments Literature No. SLUA271, and also the Product Data Sheets for specific thermal information, via requirements, and recommended board layout. These documents are available at www.ti.com <<http://www.ti.com>>.
 - E. Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Refer to IPC 7525 for stencil design considerations.
 - F. Customers should contact their board fabrication site for solder mask tolerances.

IMPORTANT NOTICE

Texas Instruments Incorporated (TI) reserves the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete.

TI's published terms of sale for semiconductor products (<http://www.ti.com/sc/docs/stdterms.htm>) apply to the sale of packaged integrated circuit products that TI has qualified and released to market. Additional terms may apply to the use or sale of other types of TI products and services.

Reproduction of significant portions of TI information in TI data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such reproduced documentation. Information of third parties may be subject to additional restrictions. Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyers and others who are developing systems that incorporate TI products (collectively, "Designers") understand and agree that Designers remain responsible for using their independent analysis, evaluation and judgment in designing their applications and that Designers have full and exclusive responsibility to assure the safety of Designers' applications and compliance of their applications (and of all TI products used in or for Designers' applications) with all applicable regulations, laws and other applicable requirements. Designer represents that, with respect to their applications, Designer has all the necessary expertise to create and implement safeguards that (1) anticipate dangerous consequences of failures, (2) monitor failures and their consequences, and (3) lessen the likelihood of failures that might cause harm and take appropriate actions. Designer agrees that prior to using or distributing any applications that include TI products, Designer will thoroughly test such applications and the functionality of such TI products as used in such applications.

TI's provision of technical, application or other design advice, quality characterization, reliability data or other services or information, including, but not limited to, reference designs and materials relating to evaluation modules, (collectively, "TI Resources") are intended to assist designers who are developing applications that incorporate TI products; by downloading, accessing or using TI Resources in any way, Designer (individually or, if Designer is acting on behalf of a company, Designer's company) agrees to use any particular TI Resource solely for this purpose and subject to the terms of this Notice.

TI's provision of TI Resources does not expand or otherwise alter TI's applicable published warranties or warranty disclaimers for TI products, and no additional obligations or liabilities arise from TI providing such TI Resources. TI reserves the right to make corrections, enhancements, improvements and other changes to its TI Resources. TI has not conducted any testing other than that specifically described in the published documentation for a particular TI Resource.

Designer is authorized to use, copy and modify any individual TI Resource only in connection with the development of applications that include the TI product(s) identified in such TI Resource. NO OTHER LICENSE, EXPRESS OR IMPLIED, BY ESTOPPEL OR OTHERWISE TO ANY OTHER TI INTELLECTUAL PROPERTY RIGHT, AND NO LICENSE TO ANY TECHNOLOGY OR INTELLECTUAL PROPERTY RIGHT OF TI OR ANY THIRD PARTY IS GRANTED HEREIN, including but not limited to any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information regarding or referencing third-party products or services does not constitute a license to use such products or services, or a warranty or endorsement thereof. Use of TI Resources may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

TI RESOURCES ARE PROVIDED "AS IS" AND WITH ALL FAULTS. TI DISCLAIMS ALL OTHER WARRANTIES OR REPRESENTATIONS, EXPRESS OR IMPLIED, REGARDING RESOURCES OR USE THEREOF, INCLUDING BUT NOT LIMITED TO ACCURACY OR COMPLETENESS, TITLE, ANY EPIDEMIC FAILURE WARRANTY AND ANY IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, AND NON-INFRINGEMENT OF ANY THIRD PARTY INTELLECTUAL PROPERTY RIGHTS. TI SHALL NOT BE LIABLE FOR AND SHALL NOT DEFEND OR INDEMNIFY DESIGNER AGAINST ANY CLAIM, INCLUDING BUT NOT LIMITED TO ANY INFRINGEMENT CLAIM THAT RELATES TO OR IS BASED ON ANY COMBINATION OF PRODUCTS EVEN IF DESCRIBED IN TI RESOURCES OR OTHERWISE. IN NO EVENT SHALL TI BE LIABLE FOR ANY ACTUAL, DIRECT, SPECIAL, COLLATERAL, INDIRECT, PUNITIVE, INCIDENTAL, CONSEQUENTIAL OR EXEMPLARY DAMAGES IN CONNECTION WITH OR ARISING OUT OF TI RESOURCES OR USE THEREOF, AND REGARDLESS OF WHETHER TI HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

Unless TI has explicitly designated an individual product as meeting the requirements of a particular industry standard (e.g., ISO/TS 16949 and ISO 26262), TI is not responsible for any failure to meet such industry standard requirements.

Where TI specifically promotes products as facilitating functional safety or as compliant with industry functional safety standards, such products are intended to help enable customers to design and create their own applications that meet applicable functional safety standards and requirements. Using products in an application does not by itself establish any safety features in the application. Designers must ensure compliance with safety-related requirements and standards applicable to their applications. Designer may not use any TI products in life-critical medical equipment unless authorized officers of the parties have executed a special contract specifically governing such use. Life-critical medical equipment is medical equipment where failure of such equipment would cause serious bodily injury or death (e.g., life support, pacemakers, defibrillators, heart pumps, neurostimulators, and implantables). Such equipment includes, without limitation, all medical devices identified by the U.S. Food and Drug Administration as Class III devices and equivalent classifications outside the U.S.

TI may expressly designate certain products as completing a particular qualification (e.g., Q100, Military Grade, or Enhanced Product). Designers agree that it has the necessary expertise to select the product with the appropriate qualification designation for their applications and that proper product selection is at Designers' own risk. Designers are solely responsible for compliance with all legal and regulatory requirements in connection with such selection.

Designer will fully indemnify TI and its representatives against any damages, costs, losses, and/or liabilities arising out of Designer's non-compliance with the terms and provisions of this Notice.
