

LMH6622 Dual Wideband, Low Noise, 160 MHz, Operational Amplifiers

1 Features

- $V_S = \pm 6\text{ V}$, $T_A = 25^\circ\text{C}$, Typical Values Unless Specified
- Bandwidth ($A_V = +2$) 160 MHz
- Supply Voltage Range $\pm 2.5\text{ V}$ to $\pm 6\text{ V}$; $+5\text{ V}$ to $+12\text{ V}$
- Slew Rate $85\text{ V}/\mu\text{s}$
- Supply Current $4.3\text{ mA}/\text{amp}$
- Input Common Mode Voltage -4.75 V to $+5.7\text{ V}$
- Output Voltage Swing ($R_L = 100\ \Omega$) $\pm 4.6\text{ V}$
- Input Voltage Noise $1.6\text{ nV}/\sqrt{\text{Hz}}$
- Input Current Noise $1.5\text{ pA}/\sqrt{\text{Hz}}$
- Linear Output Current 90 mA
- Excellent Harmonic Distortion 90 dBc

2 Applications

- xDSL Receiver
- Low Noise Instrumentation Front End
- Ultrasound Preamp
- Active Filters
- Cellphone Basestation

3 Description

The LMH6622 is a dual high speed voltage feedback operational amplifier specifically optimized for low noise. A voltage noise specification of $1.6\text{ nV}/\sqrt{\text{Hz}}$, a current noise specification $1.5\text{ pA}/\sqrt{\text{Hz}}$, a bandwidth of 160 MHz, and a harmonic distortion specification that exceeds 90 dBc combine to make the LMH6622 an ideal choice for the receive channel amplifier in ADSL, VDSL, or other xDSL designs. The LMH6622 operates from $\pm 2.5\text{ V}$ to $\pm 6\text{ V}$ in dual supply mode and from $+5\text{ V}$ to $+12\text{ V}$ in single supply configuration. The LMH6622 is stable for $A_V \geq 2$ or $A_V \leq -1$. The fabrication of the LMH6622 on TI's advanced VIP10 process enables excellent (160 MHz) bandwidth at a current consumption of only $4.3\text{ mA}/\text{amplifier}$. Packages for this dual amplifier are the 8-lead SOIC and the 8-lead VSSOP.

Device Information⁽¹⁾

PART NUMBER	PACKAGE	BODY SIZE (NOM)
LMH6622	SOIC (8)	4.90 mm x 3.91 mm
LMH6622	VSSOP (8)	3.00 mm x 3.00 mm

(1) For all available packages, see the orderable addendum at the end of the datasheet.

4 Revision History

NOTE: Page numbers for previous revisions may differ from page numbers in the current version.

Changes from Revision D (March 2013) to Revision E	Page
<ul style="list-style-type: none"> • Changed data sheet flow and layout to conform with new TI standards. Added the following sections: Device Information Table, Application and Implementation; Power Supply Recommendations; Layout; Device and Documentation Support; Mechanical, Packaging, and Ordering Information 1 • Changed R_G to R_C. Changed A_V from +10 to +9 for Figure 38 20 • Changed R_G to R_C. Changed A_V from +10 to +9 for Figure 39 20 	

Changes from Revision C (March 2013) to Revision D	Page
<ul style="list-style-type: none"> • Changed layout of National Data Sheet to TI format 1 	

5 Pin Configuration and Functions

Pin Functions

PIN		I/O	DESCRIPTION
NAME	NO.		
OUT A	1	O	ChA Output
-IN A	2	I	ChA Inverting Input
+IN A	3	I	ChA Non-inverting Input
V-	4	I	V- Supply Pin
+IN B	5	I	ChB Non-inverting Input
-IN B	6	I	ChB Inverting Input
OUT B	7	I	ChB Output
V+	8	I	V+ Supply Pin

6 Specifications

6.1 Absolute Maximum Ratings⁽¹⁾⁽²⁾

	MIN	MAX	UNIT
V _{IN} Differential		±1.2	V
Supply Voltage (V ⁺ – V ⁻)		13.2	V
Voltage at Input Pins		V ⁺ +0.5, V ⁻ -0.5	V
SOLDERING INFORMATION			
Infrared or Convection (20 sec)		235	°C
Wave Soldering (10 sec)		260	°C
Junction Temperature ⁽³⁾		+150	°C

- (1) Absolute Maximum Ratings indicate limits beyond which damage to the device may occur. Operating Ratings indicate conditions for which the device is intended to be functional, but specific performance is not ensured. For ensured specifications and the test conditions, see the Electrical Characteristics.
- (2) If Military/Aerospace specified devices are required, please contact the Texas Instruments Sales Office/Distributors for availability and specifications.
- (3) The maximum power dissipation is a function of T_{J(MAX)}, R_{θJA} and T_A. The maximum allowable power dissipation at any ambient temperature is P_D = (T_{J(MAX)} – T_A)/R_{θJA}. All numbers apply for packages soldered directly onto a PC board.

6.2 Handling Ratings

	MIN	MAX	UNIT
T _{stg} Storage temperature range	-65°	+150	°C
V _(ESD) Electrostatic discharge	Human body model (HBM), per ANSI/ESDA/JEDEC JS-001, all pins ⁽¹⁾	2000 ⁽²⁾	V
	Charged device model (CDM), per JEDEC specification JESD22-C101, all pins ⁽³⁾	200 ⁽²⁾	

- (1) JEDEC document JEP155 states that 2000-V HBM allows safe manufacturing with a standard ESD control process.
- (2) Human body model, 1.5 kΩ in series with 100 pF. Machine model, 0 Ω in series with 200 pF.
- (3) JEDEC document JEP157 states that 200-V CDM allows safe manufacturing with a standard ESD control process.

6.3 Recommended Operating Conditions⁽¹⁾

	MIN	MAX	UNIT
Supply Voltage (V ⁺ – V ⁻)	±2.25	±6	V
Temperature Range ⁽²⁾⁽³⁾	-40	+85	°C

- (1) Absolute Maximum Ratings indicate limits beyond which damage to the device may occur. Operating Ratings indicate conditions for which the device is intended to be functional, but specific performance is not ensured. For ensured specifications and the test conditions, see the Electrical Characteristics.
- (2) Applies to both single-supply and split-supply operation. Continuous short circuit operation at elevated ambient temperature can result in exceeding the maximum allowed junction temperature of 150°C.
- (3) The maximum power dissipation is a function of T_{J(MAX)}, R_{θJA} and T_A. The maximum allowable power dissipation at any ambient temperature is P_D = (T_{J(MAX)} – T_A)/R_{θJA}. All numbers apply for packages soldered directly onto a PC board.

6.4 Thermal Information

THERMAL METRIC ⁽¹⁾	LMH6622	LMH6622	UNIT
	Package D	Package DGK	
	8 PINS	8 PINS	
R _{θJA} Junction-to-ambient thermal resistance ⁽²⁾	166°	211°	°C/W

- (1) For more information about traditional and new thermal metrics, see the *IC Package Thermal Metrics* application report, [SPRA953](http://www.ti.com/lit/zip/spra953).
- (2) The maximum power dissipation is a function of T_{J(MAX)}, R_{θJA} and T_A. The maximum allowable power dissipation at any ambient temperature is P_D = (T_{J(MAX)} – T_A)/R_{θJA}. All numbers apply for packages soldered directly onto a PC board.

6.5 ±6 V Electrical Characteristics

Unless otherwise specified, $T_J = 25^\circ\text{C}$, $V^+ = 6\text{ V}$, $V^- = -6\text{ V}$, $V_{\text{CM}} = 0\text{ V}$, $A_V = +2$, $R_F = 500\ \Omega$, $R_L = 100\ \Omega$. Some limits apply at the temperature extremes as noted in the table.

PARAMETER	TEST CONDITIONS	TEMPERATURE EXTREMES			ROOM TEMPERATURE			UNIT
		MIN ⁽¹⁾	TYP ⁽²⁾	MAX ⁽¹⁾	MIN ⁽¹⁾	TYP ⁽²⁾	MAX ⁽¹⁾

								dB

(1) All limits are specified by testing or statistical analysis.

(2) Typical values represent the most likely parametric norm.

(3) Slew rate is the slowest of the rising and falling slew rates.

(4) Offset voltage average drift is determined by dividing the change in V_{OS} at temperature extremes into the total temperature change.

±6 V Electrical Characteristics (continued)

Unless otherwise specified, $T_J = 25^\circ\text{C}$, $V^+ = 6\text{ V}$, $V^- = -6\text{ V}$, $V_{\text{CM}} = 0\text{ V}$, $A_V = +2$, $R_F = 500\ \Omega$, $R_L = 100\ \Omega$. Some limits apply at the temperature extremes as noted in the table.

PARAMETER	TEST CONDITIONS	TEMPERATURE EXTREMES			ROOM TEMPERATURE			UNIT		
		MIN ⁽¹⁾	TYP ⁽²⁾	MAX ⁽¹⁾	MIN ⁽¹⁾	TYP ⁽²⁾	MAX ⁽¹⁾			
TRANSFER CHARACTERISTICS										
A_{VOL}	Large Signal Voltage Gain	$V_O = 4\text{ V}_{\text{PP}}$	70			74	83		dB	
X_t	Crosstalk	$f = 1\text{ MHz}$				-75			dB	
OUTPUT CHARACTERISTICS										
V_O	Output Swing	No Load, Positive Swing	4.6			4.8	5.2		V	
		No Load, Negative Swing					-5.0			-4.6
		$R_L = 100\ \Omega$, Positive Swing	3.8			4.0	4.6			
		$R_L = 100\ \Omega$, Negative Swing					-4.6			-4
R_O	Output Impedance	$f = 1\text{ MHz}$				0.08			Ω	
I_{SC}	Output Short Circuit Current	Sourcing to Ground $\Delta V_{\text{IN}} = 200\text{ mV}^{(5)}, (6)$				100	135		mA	
		Sinking to Ground $\Delta V_{\text{IN}} = -200\text{ mV}^{(5)}, (6)$				100	130

8 Detailed Description

8.1 Overview

The LMH6622 is a dual high speed voltage operational amplifier specifically optimized for low noise. The LMH6622 operates from ± 2.5 V to ± 6 V in dual supply mode and from +5 V to +12 V in single supply configuration.

8.2 Functional Block Diagram

Figure 34. xDSL Analog Front End

8.3 Feature Description

- 4.5 V to 12 V supply range
- Large linear output current of 90 mA
- Excellent harmonic distortion of 90 dBc

8.4 Device Functional Modes

- Single or dual supplies
- Traditional voltage feedback topology for maximum flexibility

9 Application and Implementation

9.1 DSL Receive Channel Applications

Figure 35. ADSL Signal Description

The LMH6622 is a dual, wideband operational amplifier designed for use as a DSL line receiver. In the receive band of a Customer Premises Equipment (CPE) ADSL modem it is possible that as many as 255 Discrete Multi-Tone (DMT) QAM signals will be present, each with its own carrier frequency, modulation, and signal level. The ADSL standard requires a line referred noise power density of -140 dBm/Hz within the CPE receive band of 100 KHz to 1.1 MHz. The CPE driver output signal will leak into the receive path because of full duplex operation and the imperfections of the hybrid coupler circuit. The DSL analog front end must incorporate a receiver pre-amp which is both low noise and highly linear for ADSL-standard operation. The LMH6622 is designed for the twin performance parameters of low noise and high linearity.

DSL Receive Channel Applications (continued)

Applications ranging from +5 V to +12 V or ± 2.5 V to ± 6 V are fully supported by the LMH6622. In Figure 36, the LMH6622 is used as an inverting summing amplifier to provide both received pre-amp channel gain and driver output signal cancellation, that is, the function of a hybrid coupler.

Figure 36. ADSL Receive Applications Circuit

The two R_S resistors are used to provide impedance matching through the 1:N transformer.

$$R_S = \frac{R_L}{N^2}$$

where

- R_L is the impedance of the twisted pair line
 - N is the turns ratio of the transformer
- (1)

The resistors R_2 and R_F are used to set the receive gain of the pre-amp. The receive gain is selected to meet the ADC full-scale requirement of a DSL chipset.

Resistor R_1 and R_2 along with R_F are used to achieve cancellation of the output driver signal at the output of the receiver.

Since the LMH6622 is configured as an inverting summing amplifier, V_{OUT} is found to be,

$$V_{OUT} = -R_F \left[\frac{V_1}{R_1} + \frac{V_2}{R_2} \right]$$
(2)

The expression for V_1 and V_2 can be found by using superposition principle.

When $V_S = 0$,

$$V_1 = \frac{1}{2}V_A \quad \text{and} \quad V_2 = -\frac{1}{4}V_A$$
(3)

When $V_A = 0$,

$$V_1 = 0 \quad \text{and} \quad V_2 = -\frac{1}{2}V_{T1}$$
(4)

DSL Receive Channel Applications (continued)

Therefore,

$$V_1 = \frac{1}{2}V_A \quad \text{and} \quad V_2 = -\frac{1}{4}V_A - \frac{1}{2}V_{T1} \quad (5)$$

And then,

$$V_{OUT} = -R_F \left[\frac{V_A}{2R_1} - \frac{V_A}{4R_2} - \frac{V_{T1}}{2R_2} \right] \quad (6)$$

Setting $R_1 = 2 \cdot R_2$ to cancel unwanted driver signal in the receive path, then we have

$$V_{OUT} = \frac{R_F}{2R_2} V_{T1} \quad (7)$$

We can also find that,

$$V_{TN} = \frac{1}{2} V_S \quad \text{and} \quad V_{T1} = \frac{1}{N} V_{TN} = \frac{1}{2N} V_S \quad (8)$$

And then

$$V_{OUT} = \frac{R_F}{4NR_2} V_S \quad (9)$$

In conclusion, the peak-to-peak voltage to the ADC would be,

$$2 V_{OUT} = \frac{R_F}{2NR_2} V_S \quad (10)$$

9.2 Receive Channel Noise Calculation

The circuit of [Figure 36](#) also has the characteristic that it cancels noise power from the drive channel.

The noise gain of the receive pre-amp is found to be:

$$A_n = 1 + \frac{R_F}{R_1/R_2} \quad (11)$$

Noise power at each of the output of LMH6622:

$$e_o^2 = A_n^2 [V_n^2 + i_{non-inv}^2 R_+^2 + 4kT R_+] + i_{inv}^2 R_F^2 + 4kT R_F A_n$$

where

- V_n is the Input referred voltage noise
 - i_n is the Input referred current noise
 - $i_{non-inv}$ is the Input referred non-inverting current noise
 - i_{inv} is the Input referred inverting current noise
 - k is the Boltzmann's constant, $K = 1.38 \times 10^{-23}$
 - T is the Resistor temperature in k
 - R_+ is the source resistance at the non-inverting input to balance offset voltage, typically very small for this inverting summing applications
- (12)

For a voltage feedback amplifier,

$$i_{inv} = i_{non-inv} = i_n \quad (13)$$

Therefore, total output noise from the differential pre-amp is:

$$e_{TotalOutput}^2 = 2 e_o^2 \quad (14)$$

The factor '2' appears here because of differential output.

9.3 Differential Analog-to-Digital Driver

Figure 37. Circuit for Differential A/D Driver

The LMH6622 is a low noise, low distortion high speed operational amplifier. The LMH6622 comes in either SOIC-8 or VSSOP-8 packages. Because two channels are available in each package the LMH6622 can be used as a high dynamic range differential amplifier for the purpose of driving a high speed analog-to-digital converter. Driving a 1 kΩ load, the differential amplifier of Figure 37 provides 20 dB gain, a flat frequency response up to 6 MHz, and harmonic distortion that is lower than 80 dBc. This circuit makes use of a transformer to convert a single-ended signal to a differential signal. The input resistor R_{IN} is chosen by the following equation,

$$R_{IN} = \frac{1}{N^2} R_S \tag{15}$$

The gain of this differential amplifier can be adjusted by R_C and R_F ,

$$A_V = 2 \frac{R_F}{R_C} \tag{16}$$

See Figure 38 and Figure 39 below for plots related to the discussion of Figure 37.

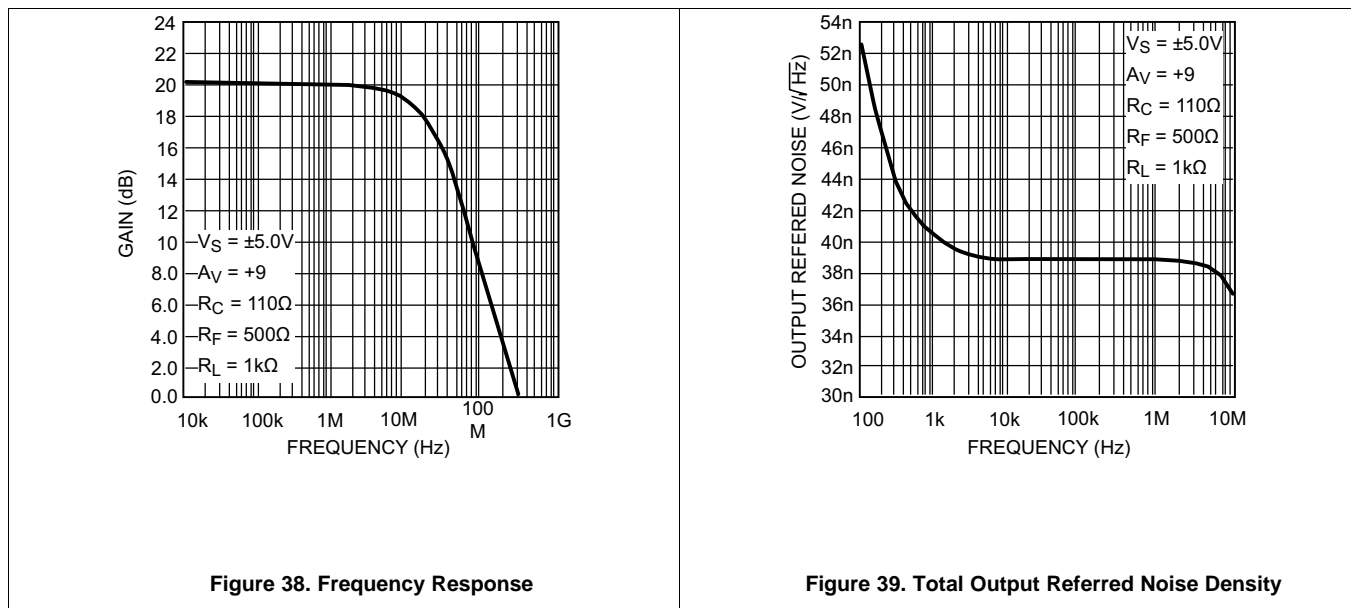

Figure 38. Frequency Response

Figure 39. Total Output Referred Noise Density

9.4 Typical Application

See [Figure 40](#) for application circuit.

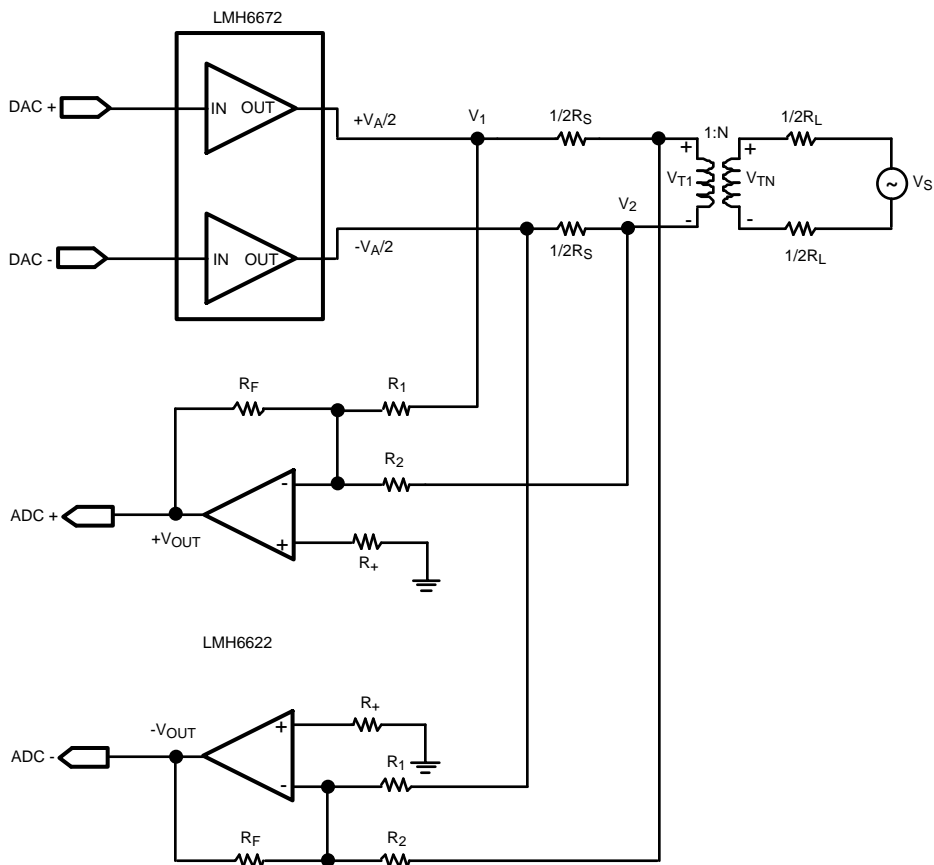

Figure 40. ADSL Receive Applications Circuit

9.4.1 Design Requirements

All normal precautions / considerations with Op Amps apply

9.4.2 Detailed Design Procedure

- Use power supply decoupling capacitors close to supply pins
- Beware of junction temperature rise at elevated ambient temperature and / or heavy output(s) load current especially at higher supply voltages
- Ground plane near sensitive input pins can be removed to minimize parasitic capacitance

9.4.3 Application Curves

See [Figure 38](#) and [Figure 39](#).

10 Power Supply Recommendations

10.1 Driving Capacitive Load

Capacitive Loads decrease the phase margin of all op amps. The output impedance of a feedback amplifier becomes inductive at high frequencies, creating a resonant circuit when the load is capacitive. This can lead to overshoot, ringing and oscillation. To eliminate oscillation or reduce ringing, an isolation resistor can be placed between the load and the output. In general, the bigger the isolation resistor, the more damped the pulse response becomes. For initial evaluation, a 50 Ω isolation resistor is recommended.

11 Layout

11.1 Layout Guidelines

11.1.1 Circuit Layout Considerations

Texas Instruments suggests the copper patterns on the evaluation boards listed below as a guide for high frequency layout. These boards are also useful as an aid in device testing and characterization. As is the case with all high-speed amplifiers, accepted-practice R_F design technique on the PCB layout is mandatory. Generally, a good high frequency layout exhibits a separation of power supply and ground traces from the inverting input and output pins. Parasitic capacitances between these nodes and ground will cause frequency response peaking and possible circuit oscillations (see [SNOA367](#), Application Note OA-15, for more information). High quality chip capacitors with values in the range of 1000 pF to 0.1 μ F should be used for power supply bypassing. One terminal of each chip capacitor is connected to the ground plane and the other terminal is connected to a point that is as close as possible to each supply pin as allowed by the manufacturer's design rules. In addition, a tantalum capacitor with a value between 4.7 μ F and 10 μ F should be connected in parallel with the chip capacitor. Signal lines connecting the feedback and gain resistors should be as short as possible to minimize inductance and microstrip line effect. Input and output termination resistors should be placed as close as possible to the input/output pins. Traces greater than 1 inch in length should be impedance matched to the corresponding load termination.

Symmetry between the positive and negative paths in the layout of differential circuitry should be maintained so as to minimize the imbalance of amplitude and phase of the differential signal.

DEVICE	PACKAGE	EVALUATION BOARD P/N
LMH6622MA	SOIC-8	LMH730036
LMH6622MM	VSSOP-8	LMH730123

Component value selection is another important parameter in working with high speed/high performance amplifiers. Choosing external resistors that are large in value compared to the value of other critical components will affect the closed loop behavior of the stage because of the interaction of these resistors with parasitic capacitances. These parasitic capacitors could either be inherent to the device or be a by-product of the board layout and component placement. Moreover, a large resistor will also add more thermal noise to the signal path. Either way, keeping the resistor values low will diminish this interaction. On the other hand, choosing very low value resistors could load down nodes and will contribute to higher overall power dissipation and worse distortion.

12 Device and Documentation Support

12.1 Trademarks

All trademarks are the property of their respective owners.

12.2 Electrostatic Discharge Caution

These devices have limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

12.3 Glossary

[SLYZ022](#) — *TI Glossary*.

This glossary lists and explains terms, acronyms, and definitions.

13 Mechanical, Packaging, and Orderable Information

The following pages include mechanical, packaging, and orderable information. This information is the most current data available for the designated devices. This data is subject to change without notice and revision of this document. For browser-based versions of this data sheet, refer to the left-hand navigation.

PACKAGING INFORMATION

Orderable Device	Status (1)	Package Type	Package Drawing	Pins	Package Qty	Eco Plan (2)	Lead/Ball Finish (6)	MSL Peak Temp (3)	Op Temp (°C)	Device Marking (4/5)	Samples
LMH6622MA/NOPB	ACTIVE	SOIC	D	8	95	Green (RoHS & no Sb/Br)	CU SN	Level-1-260C-UNLIM	-40 to 85	LMH6622MA	Samples
LMH6622MAX/NOPB	ACTIVE	SOIC	D	8	2500	Green (RoHS & no Sb/Br)	CU SN	Level-1-260C-UNLIM	-40 to 85	LMH6622MA	Samples

LMH6622MMX/NOPB	ACTIVE	VSSOP	DGK	8	3500	Green (RoHS & no Sb/Br)	CU SN	Level-1-260C-UNLIM	-40 to 85	A80A	Samples

(1) The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSELETE: TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

Green: TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "-" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

Important Information and Disclaimer:The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and

continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

PLASTIC SMALL OUTLINE

NOTES: A. All linear dimensions are in inches (millimeters).
 B. This drawing is subject to change without notice.
 C. Body length does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed 0.006 (0,15) each side.
 D. Body width does not include interlead flash. Interlead flash shall not exceed 0.017 (0,43) each side.
 E. Reference JEDEC MS-012 variation AA.

- NOTES:
- A. All linear dimensions are in millimeters.
 - B. This drawing is subject to change without notice.
 - C. Publication IPC-7351 is recommended for alternate designs.
 - D. Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Refer to IPC-7525 for other stencil recommendations.
 - E. Customers should contact their board fabrication site for solder mask tolerances between and around signal pads.

IMPORTANT NOTICE

Texas Instruments Incorporated (TI) reserves the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete.

TI's published terms of sale for semiconductor products (<http://www.ti.com/sc/docs/stdterms.htm>) apply to the sale of packaged integrated circuit products that TI has qualified and released to market. Additional terms may apply to the use or sale of other types of TI products and services.

Reproduction of significant portions of TI information in TI data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such reproduced documentation. Information of third parties may be subject to additional restrictions. Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyers and others who are developing systems that incorporate TI products (collectively, "Designers") understand and agree that Designers remain responsible for using their independent analysis, evaluation and judgment in designing their applications and that Designers have full and exclusive responsibility to assure the safety of Designers' applications and compliance of their applications (and of all TI products used in or for Designers' applications) with all applicable regulations, laws and other applicable requirements. Designer represents that, with respect to their applications, Designer has all the necessary expertise to create and implement safeguards that (1) anticipate dangerous consequences of failures, (2) monitor failures and their consequences, and (3) lessen the likelihood of failures that might cause harm and take appropriate actions. Designer agrees that prior to using or distributing any applications that include TI products, Designer will thoroughly test such applications and the functionality of such TI products as used in such applications.

TI's provision of technical, application or other design advice, quality characterization, reliability data or other services or information, including, but not limited to, reference designs and materials relating to evaluation modules, (collectively, "TI Resources") are intended to assist designers who are developing applications that incorporate TI products; by downloading, accessing or using TI Resources in any way, Designer (individually or, if Designer is acting on behalf of a company, Designer's company) agrees to use any particular TI Resource solely for this purpose and subject to the terms of this Notice.

TI's provision of TI Resources does not expand or otherwise alter TI's applicable published warranties or warranty disclaimers for TI products, and no additional obligations or liabilities arise from TI providing such TI Resources. TI reserves the right to make corrections, enhancements, improvements and other changes to its TI Resources. TI has not conducted any testing other than that specifically described in the published documentation for a particular TI Resource.

Designer is authorized to use, copy and modify any individual TI Resource only in connection with the development of applications that include the TI product(s) identified in such TI Resource. NO OTHER LICENSE, EXPRESS OR IMPLIED, BY ESTOPPEL OR OTHERWISE TO ANY OTHER TI INTELLECTUAL PROPERTY RIGHT, AND NO LICENSE TO ANY TECHNOLOGY OR INTELLECTUAL PROPERTY RIGHT OF TI OR ANY THIRD PARTY IS GRANTED HEREIN, including but not limited to any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information regarding or referencing third-party products or services does not constitute a license to use such products or services, or a warranty or endorsement thereof. Use of TI Resources may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

TI RESOURCES ARE PROVIDED "AS IS" AND WITH ALL FAULTS. TI DISCLAIMS ALL OTHER WARRANTIES OR REPRESENTATIONS, EXPRESS OR IMPLIED, REGARDING RESOURCES OR USE THEREOF, INCLUDING BUT NOT LIMITED TO ACCURACY OR COMPLETENESS, TITLE, ANY EPIDEMIC FAILURE WARRANTY AND ANY IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, AND NON-INFRINGEMENT OF ANY THIRD PARTY INTELLECTUAL PROPERTY RIGHTS. TI SHALL NOT BE LIABLE FOR AND SHALL NOT DEFEND OR INDEMNIFY DESIGNER AGAINST ANY CLAIM, INCLUDING BUT NOT LIMITED TO ANY INFRINGEMENT CLAIM THAT RELATES TO OR IS BASED ON ANY COMBINATION OF PRODUCTS EVEN IF DESCRIBED IN TI RESOURCES OR OTHERWISE. IN NO EVENT SHALL TI BE LIABLE FOR ANY ACTUAL, DIRECT, SPECIAL, COLLATERAL, INDIRECT, PUNITIVE, INCIDENTAL, CONSEQUENTIAL OR EXEMPLARY DAMAGES IN CONNECTION WITH OR ARISING OUT OF TI RESOURCES OR USE THEREOF, AND REGARDLESS OF WHETHER TI HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

Unless TI has explicitly designated an individual product as meeting the requirements of a particular industry standard (e.g., ISO/TS 16949 and ISO 26262), TI is not responsible for any failure to meet such industry standard requirements.

Where TI specifically promotes products as facilitating functional safety or as compliant with industry functional safety standards, such products are intended to help enable customers to design and create their own applications that meet applicable functional safety standards and requirements. Using products in an application does not by itself establish any safety features in the application. Designers must ensure compliance with safety-related requirements and standards applicable to their applications. Designer may not use any TI products in life-critical medical equipment unless authorized officers of the parties have executed a special contract specifically governing such use. Life-critical medical equipment is medical equipment where failure of such equipment would cause serious bodily injury or death (e.g., life support, pacemakers, defibrillators, heart pumps, neurostimulators, and implantables). Such equipment includes, without limitation, all medical devices identified by the U.S. Food and Drug Administration as Class III devices and equivalent classifications outside the U.S.

TI may expressly designate certain products as completing a particular qualification (e.g., Q100, Military Grade, or Enhanced Product). Designers agree that it has the necessary expertise to select the product with the appropriate qualification designation for their applications and that proper product selection is at Designers' own risk. Designers are solely responsible for compliance with all legal and regulatory requirements in connection with such selection.

Designer will fully indemnify TI and its representatives against any damages, costs, losses, and/or liabilities arising out of Designer's non-compliance with the terms and provisions of this Notice.
