Multilayer Ceramic Chip Capacitors

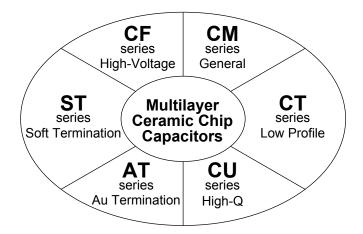

Kyocera's series of Multilayer Ceramic Chip Capacitors are designed to meet a wide variety of needs. We offer a complete range of products for both general and specialized applications, including CM series for general-purpose, CT series for low profile, CU series for Hi-Q, AT series for Au termination, ST series for soft termination, and CF series for high-voltage.

Features

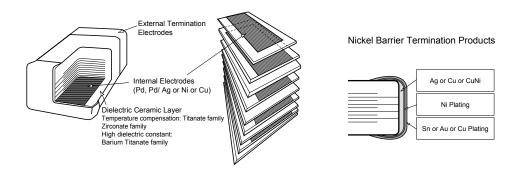

- We have a network worldwide in order to supply our global customer bases quickly and efficiently and to maintain our reputation as one of the highest-volume producers in the industry.
- All our products are highly reliable due to their monolithic structure of high-purity and superfine uniform ceramics and their integral internal electrodes.
- By combining superior manufacturing technology and materials with high dielectric constants, we produce extremely compact components with exceptional specifications.
- Our stringent quality control in every phase of production from material procurement to shipping ensures consistent manufacturing and super quality.
- Kyocera components are available in a wide choice of dimensions, temperature characteristics, rated voltages, and terminations to meet specific configurational requirements.

Structure

Tape and Reel

Please contact your local AVX, Kyocera sales office or distributor for specifications not covered in this catalog

Our products are continually being improved. As a result, the capacitance range of each series is subject to change without notice. Please contact an sales representative to confirm compatibility with your application.

Multilayer Ceramic Chip Capacitors

Kyocera Ceramic Chip Capacitors are available for different applications as classified below:

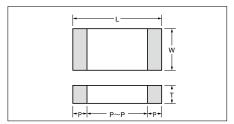

Series	Dielectric Options	Typical Applications	Features	Terminations	Available Size
СМ	C0G (NP0) X5R X7R *X6S X7S	General purpose	Wide cap range	Nickel barrier/ Tin	01005, 0201, 0402 0603, 0805, 1206 1210, 1812
СТ	X5R X7R	Module / Memory card	Low profile	Nickel barrier/ Tin	0201, 0402, 0603 0805, 1206, 1210
CU	COG (NP0)	Power amplifier	High-Q	Nickel barrier/ Tin	01005
AT	X5R X7R	Optical communications	Au termination	Nickel barrier/ Au	0201, 0402
ST	X5R X7R X7S	PCB with severe bending conditions	Soft termination	Nickel barrier/ Tin (Soft Termination)	0201, 0402
CF	C0G (NP0) X7R	High voltage & Power circuits	High voltage 250Vdc, 630Vdc 1000Vdc, 2000Vdc 3000Vdc, 4000Vdc	Nickel barrier/ Tin	0805, 1206, 1210 1808, 1812, 2208 2220

^{*} Option
* Negative temperature coefficient dielectric types are available on request.

4.7	6.8	5.6	5.6	6.2
4.7		6.8	6.8	7.5
		8.2	8.2	9.1

Temperature coefficients are determined by calculation based on measurement at 20°C and 85°C.

^{*1} Nominal values below 10pF are available in the standard values of 0.5pF, 1.0pF, 1.5pF, 2.0pF, 3.0pF, 4.0pF, 5.0pF, 6.0pF, 7.0pF, 8.0pF, 9.0pF

^{*2} option

^{*3} E6 series is available on request.

CT Series Low Profile Applications

[RoHS Compliant Products]

Features

This low profile series is ideal where height clearance is limited.

Applications

Circuits requiring a compact, low-profile design, such as module and memory cards.

Multilayer Ceramic Chip Capacitors Test Conditions and Standards

Test Conditions and Specifications for High Dielectric Type (X5R, X7R) CM/ CT Series

Test Items		Test Conditions	Specifications		
Capacitance Value (C)		Measure after heat treatment	Within tolerance		
Capacitance Frequency Volt C≤10μF 1kHz±10% 1.0±0.2Vrms C>10μF 120Hz±10% 0.5±0.2Vrms		C≤10μF 1kHz±10% 1.0±0.2Vrms C>10μF 120Hz±10% 0.5±0.2Vrms	Refer to capacitance chart		
Insulation Resistance (IR)		Measured after the rated voltage is applied for 1 minute at room ambient. The charge and discharge current of the capacitor must not exceed 50mA.	Over 10000M Ω or 500M Ω • μ F, whichever is less		
Dielectric Res	istance	Apply 2.5 times of the rated voltage for 1 to 5 seconds. The charge and discharge current of the capacitor must not exceed 50mA.	No problem observed		
Appearance		Microscope	No problem observed		
Termination St	trength	Apply a sideward force of 500g (5N) to a PCB-mounted sample. note: 2N for 0201 size, and 1N for 01005 size. Exclude CT series with thickness of less than 0.66mm.	No problem observed		
Bending Stren	gth	Glass epoxy PCB: Fulcrum spacing: 90mm, duration time 10 seconds. Exclude CT series with thickness of less than 0.66mm.	No significant damage at 1mm bent		
Vibration	Appearance	Take the initial value after heat treatment.	No problem observed		
Test	ΔC	Vibration frequency: 10 to 55 (Hz) Amplitude: 1.5mm	Within tolerance		
	Tanδ (%)	Sweeping condition: 10→55→10Hz/ 1 minute in X, Y and Z Directions: 2 hours each, 6 hours total.	Within tolerance		
Soldering	Appearance	Take the initial value after heat treatment.	No problem observed		
Heat Resistance	ΔC	Soak the sample in 260°C±5°C solder for 10±0.5 seconds and place in room ambient, and measure	Within ±7.5%		
nesistance	Tanδ (%)	after 24±2 hours.	Within tolerance		
	IR	(Pre-heating conditions)	Over 10000M Ω or 500M Ω • μ F, whichever is less		
	Withstanding Voltage	Order Temperature Time 1 80 to 100°C 2 minutes 2 150 to 200°C 2 minutes The charge and discharge current of the capacitor must not exceed 50mA for IR and withstanding voltage measurement.	Resist without problem		
Solderablity		Soaking condition 3±0.5 sec. Sn-3Ag-0.5Cu 245±5°C 3±0.5 sec. Sn63 Solder 235±5°C 2±0.5 sec.	Solder coverage : 90% min.		
Temperature Cycle	Appearance	Take the initial value after heat treatment. (Cycle)	No problem observed		
Cycle	ΔC	Room temperature (3min.)→	Within ±7.5%		
	Tanδ (%) IR	Lowest operation temperature (30min.)→	Within tolerance Over 10000MΩ or 500MΩ • μF, whichever is less		
	Withstanding Voltage	Room temperature (3min.)— Highest operation temperature(30min.) After 5 cycles, measure after 24±2 hours. The charge and discharge current of the capacitor must not exceed 50mA for IR and withstanding voltage measurement.	Resist without problem		
Load	Appearance	Take the initial value after voltage treatment.	No problem observed		
Humidity	ΔC	After applying rated voltage for 500+12/ –0 hours in pre-condition at 40°C±2°C, humidity 90 to	Within ±12.5%		
Test	Tanδ (%)	95%RH, allow parts to stabilize for 24±2 hours, at	200% max. of initial value		
	IR	room temperature before measurement. The charge and discharge current of the capacitor must not exceed 50mA for IR measurement.			
High-	Appearance	Take the initial value after voltage treatment.	No problem observed		
Temperature	ΔC	After applying twice the rated voltage at the highest operation temperature for 1000+12/ –0 hours,	Within ±12.5%		
with Loading	Tanδ (%)	measure the sample after 24±2 hours.	200% max. of initial value		
Loaung	measure the sample after 24±2 hours. The charge and discharge current of the capacitor must not exceed 50mA for IR measurement. Apply 1.5 times when the rated voltage is 10V or less. Applied voltages for respective products are indicated in the below chart.		Over 1000M Ω or 50M Ω • μ F, whichever is less		

Pre-treat-	Heat	Keep specimen at 150+0/ –10°C for 1 hour, leave specimen at room ambient for 24±2 hours.
ment	Voltage	Apply the same test condition for 1 hour, then leave the specimen at room ambient for 24±2 hours.

^{*} Option

Multilayer Ceramic Chip Capacitors Packaging Options

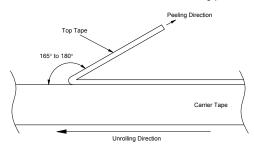

Detail of leader and trailer

Adhesive tape

- 1) The exfoliative strength when peeling off the top tape from the carrier tape by the method of the following figure shall be *0.1 to 0.7N. *02 Size: 0.1 to 0.5N
- 2) When the top tape is peeled off, the adhesive stays on the top tape.
- 3) Chip capacitors will be in a state free without being stuck on the thermal adhesive tape.

Exfoliating angle: 165 to 180 degrees to the carrier tape. Exfoliating speed: 300 mm/min.

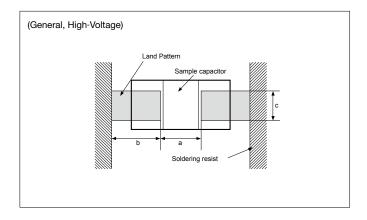

Multilayer Ceramic Chip Capacitors Surface Mounting Information

Dimensions for recommended typical land

Since the amount of solder (size of fillet) to be used has direct influence on the capacitor after mounting, the sufficient consideration is necessary.

When the amounts of solder is too much, the stress that a capacitor receives becomes larger. It may become the cause of a crack in the capacitor. When the land design of printed wiring board is considered, it is necessary to set up the form and size of land pattern so that the amount of solder is suitable.

General, High-Voltage

(Unit: mm)

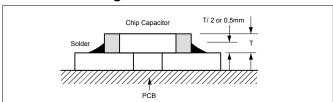

Size (EIA Code)	L×W	а	b	С
02 (01005)	0.4×0.2	0.13 to 0.20	0.12 to 0.18	0.20 to 0.23
03 (0201)	0.6×0.3	0.20 to 0.30	0.25 to 0.35	0.30 to 0.40
05 (0402)	1.0×0.5	0.30 to 0.50	0.35 to 0.45	0.40 to 0.60
105 (0603)	1.6×0.8	0.70 to 1.00	0.80 to 1.00	0.60 to 0.80
21 (0805)	2.0×1.25	1.00 to 1.30	1.00 to 1.20	0.80 to 1.10
316 (1206)	3.2×1.6	2.10 to 2.50	1.10 to 1.30	1.00 to 1.30
32 (1210)	3.2×2.5	2.10 to 2.50	1.10 to 1.30	1.90 to 2.30
42 (1808)	4.5×2.0	2.50 to 3.20 [*] 1	1.80 to 2.30	1.50 to 1.80
43 (1812)	4.5×3.2	2.50 to 3.20 [*] 1	1.80 to 2.30	2.60 to 3.00
52 (2208)	5.7×2.0	4.20 to 4.70	2.00 to 2.50	1.50 to 1.80
55 (2220)	5.7×5.0	4.20 to 4.70	2.00 to 2.50	4.20 to 4.70

 $^{^{*}\}mbox{1}$ Dimension of 3.0 to 3.5mm is recommended for "a", in the case of High-Voltage products.

Design of printed circuit and Soldering

The recommended fillet height shall be 1/2 of the thickness of capacitors or 0.5mm. When mounting two or more capacitors in the common land, it is necessary to separate the land with the solder resist strike so that it may become the exclusive land of each capacitor.

Ideal Solder Height

Item	Not recommended example	Recommended example/ Separated by solder
Multiple parts mount		Solder resist
Mount with leaded parts	Leaded parts	Solder resist Leaded parts
Wire soldering after mounting	Soldering iron Wire	Solder resist
Overview	Solder resist	Solder resist

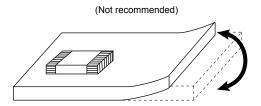

Multilayer Ceramic Chip Capacitors Surface Mounting Information

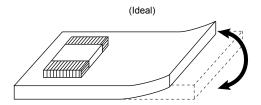

Mounting Design

The chip could crack if the PCB warps during processing after the chip has been soldered.

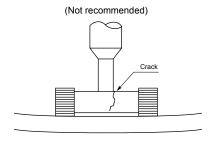

Recommended chip position on PCB to minimize stress from PCB warpage

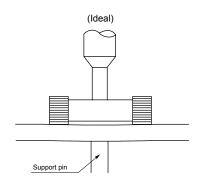

Actual Mounting

- 1) If the position of the vacuum nozzle is too low, a large force may be applied to the chip capacitor during mounting, resulting in cracking.
- 2) During mounting, set the nozzle pressure to a static load of 1 to 3 N.
- 3) To minimize the shock of the vaccum nozzle, provide a support pin on the back of the PCB to minimize PCB flexture.

4) Bottom position of pick up nozzle should be adjusted to the top surface of a substrate which camber is corrected.

Resin Mold

- 1) If a large amount of resin is used for molding the chip, cracks may occur due to contraction stress during curing. To avoid such cracks, use a low shrinkage resin.
- 2) The insulation resistance of the chip will degrade due to moisture absorption. Use a low moisture absorption resin.
- 3) Check carefully that the resin does not generate a decomposition gas or reaction gas during the curing process or during normal storage. Such gases may crack the chip capacitor or damage the device itself.

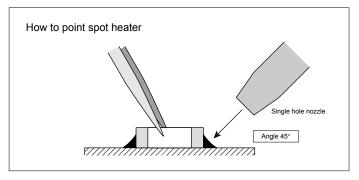

Multilayer Ceramic Chip Capacitors Surface Mounting Information

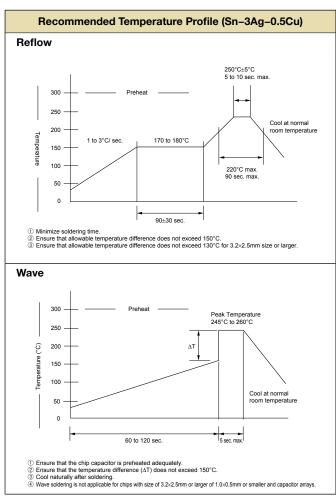

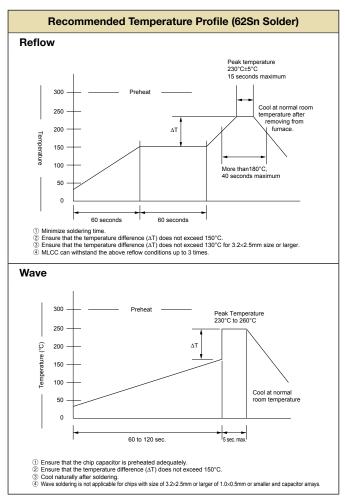

Soldering Method

- 1) Ceramic is easily damaged by rapid heating or cooling. If some heat shock is unavoidable, preheat enough to limit the temperature difference (Delta T) to within 150 degree Celsius.
- 2) The product size 1.6×0.8mm to 3.2×1.6mm can be used in reflow and wave soldering, and the product size of bigger than 3.2×1.6mm, or smaller than 1.6×0.8mm can be used in reflow.
 - Circuit shortage and smoking can be created by using capacitors which are used neglecting the above caution.
- 3) Please see our recommended soldering conditions.
- 4) In case of using Sn-Zn Solder, please contact us in advance.
- 5) The following condition is recommended for spot heater application.
- · Recommended spot heater condition

Item	Condition
Distance	5mm min.
Angle	45°
Projection Temp.	400°C max.
Flow rate	Set at the minimum
Nozzle diameter	2φ to 4φ (Single hole type)
Application time	10 sec. max. (1206 and smaller) 30 sec.max. (1210 and larger)

Soldering iron

1) Temperature of iron chip

1210 and larger 280°C max.

2) Wattage

3) Tip shape of soldering iron

4) Soldering Time

1206 and smaller 350°C max.

80W max.

φ3.0mm max.

3 sec. max.

5) Cautions

a) Pre-heating is necessary rapid heating must be avoided.

Delta T≤150°C (product size of bigger than 3.2×1.6mm. Delta T≤130°C)

- b) Avoid direct touching to capacitors.
- c) Avoid rapid cooling after soldering. Natural cooling is recommended.
- *Consult as if it is difficult to keep the temperature 280°C max. for 1210 and larger MLCC'S.

Multilayer Ceramic Chip Capacitors Precautions

Circuit Design

- 1. Once application and assembly environments have been checked, the capacitor may be used in conformance with the rating and performance which are provided in both the catalog and the specifications. Use exceeding that which is specified may result in inferior performance or cause a short, open, smoking, or flaming to occur, etc.
- 2. Please consult the manufacturer in advance when the capacitor is used in devices such as: devices which deal with human life, i.e. medical devices; devices which are highly public orientated; and devices which demand a high standard of liability.
 Accident or malfunction of devices such as medical devices, space equipment and devices having to do with atomic power could generate grave consequence with respect to human lives or, possibly, a portion of the public. Capacitors used in these devices may require high reliability design different from that of general purpose capacitors.
- 3. Please use the capacitors in conformance with the operating temperature provided in both the catalog and the specifications.

 Be especially cautious not to exceed the maximum temperature. In the situation the maximum temperature set forth in both the catalog and specifications is exceeded, the capacitor's insulation resistance may deteriorate, power may suddenly surge and short-circuit may occur.

 The capacitor has a loss, and may self-heat due to equivalent series resistance when alternating electric current is passed therethrough. As this effect becomes especially pronounced in high frequency circuits, please exercise caution.

 When using the capacitor in a (self-heating) circuit, please make sure the surface of the capacitor remains under the maximum temperature for usage. Also, please make certain temperature rises remain below 20°C.
- 4. Please keep voltage under the rated voltage which is applied to the capacitor. Also, please make certain the peak voltage remains below the rated voltage when AC voltage is super-imposed to the DC voltage.
 In the situation where AC or pulse voltage is employed, ensure average peak voltage does not exceed the rated voltage.
 Exceeding the rated voltage provided in both catalog and specifications may lead to defective withstanding voltage or, in worst case situations, may cause the capacitor to smoke or flame.
- 5. When the capacitor is to be employed in a circuit in which there is continuous application of a high frequency voltage or a steep pulse voltage, even though it is within the rated voltage, please inquire to the manufacturer.
 In the situation the capacitor is to be employed using a high frequency AC voltage or a extremely fast rising pulse voltage, even though it is within the rated voltage, it is possible capacitor reliability will deteriorate.
- 6. It is a common phenomenon of high-dielectric products to have a deteriorated amount of static electricity due to the application of DC voltage.

 Due caution is necessary as the degree of deterioration varies depending on the quality of capacitor materials, capacity, as well as the load voltage at the time of operation.
- 7. Do not use the capacitor in an environment where it might easily exceed the respective provisions concerning shock and vibration specified in the catalog and specifications.
 In addition, it is a common piezo phenomenon of high dielectric products to have some voltage due to vibration or to have noise due to
- 8. If the electrostatic capacity value of the delivered capacitor is within the specified tolerance, please consider this when designing the respective product in order that the assembled product function appropriately.
- 9. Please contact us upon using conductive adhesives.

voltage change. Please contact sales in such case.

Storage

- 1. If the component is stored in minimal packaging (a heat-sealed or zippered plastic bag), the bag should be kept closed. Once the bag has been opened, reseal it or store it in a desiccator.
- 2. Keep storage place temperature +5 to +40 degree C, humidity 20 to 70% RH. See JIS C 60721-3-1, class 1K2 for other climatic conditions.
- 3. The storage atmosphere must be free of corrosive gas such as sulfur dioxide and chlorine. Also, avoid exposing the product to saline moisture. If the product is exposed to such atmospheres, the terminals will oxidize and solderability will be effected.
- 4. Precautions 1) to 3) apply to chip capacitors packaged in carrier tapes.
- 5. The solderability is assured for 6 months from our shipping date if the above storage precautions are followed.

Safety application guideline and detailed information of electrical properties are also provided in Kyocera home page; URL: http://www.kyocera.co.jp/electronic/
