## General Description

The MXD8545A is a CMOS silicon-on-insulator (SOI), single-pole, four-throw (SP4T) switch. The high linearity and ruggedness performance and extremely low insertion loss makes the device an ideal choice for GSM/WCDMA/LTE handset antenna tuning application.

The MXD8545A SP4T switch is provided in a compact QFN $1.1 \mathrm{~mm} \times 1.5 \mathrm{~mm} \times 0.38 \mathrm{~mm}$ package. A functional block diagram is shown in Figure 1. The pin configuration and package are shown in Figure 2. Signal pin assignments and functional pin descriptions are provided in Table 1.

## Applications

- GSM/WCDMA/LTE band and mode switching
- Antenna tuning switch

## Features

- Broadband frequency range: 0.1 to 3.0 GHz
- Low insertion 0.50 dB @ 2.7 GHz
- High P0.1dB of 43.3 dBm
- Positive low voltage control: $\mathrm{VC}=1.0$ to 3.0 V , VDD $=2.5$ to 3.3 V , Small QFN (10-pin,
$1.1 \mathrm{~mm} \times 1.5 \mathrm{~mm} \times 0.38 \mathrm{~mm}$ ) package, MSL1

Note: Exposure to maximum rating conditions for extended periods may reduce device reliability. There is no damage to device with only one parameter set at the limit and all other parameters set at or below their nominal value. Exceeding any of the limits listed here may result in permanent damage to the device.

## ESD Sensitivity

Integrated circuits are ESD sensitive and can be damaged by static electric charge. Proper ESD protection techniques should be used when handling these devices.

## RoHS Compliant

This product does not contain lead, mercury, cadmium, hexavalent chromium, polybrominated biphenyls (PBB) and polybrominated diphenyl ethers (PBDE), and are considered RoHS compliant.
