

## 60V 3A 150kHz Step-Down Voltage Regulator

### GENERAL DESCRIPTION

The LM2596HV series of regulators are monolithic integrated circuits that provide all the active functions for a step-down (buck) switching regulator, capable of driving a 3A load with excellent line and load regulation. These devices are available in fixed output voltages of 3.3V, 5V, 12V, and an adjustable output version.

Available in a standard 5-lead TO-220 package, 5-lead TO-263 surface mount package and SOP-8 package.

External shutdown is included, featuring typically 30  $\mu$ A standby current. The output switch includes cycle-by-cycle current limiting, as well as thermal shutdown, and protection from output short for full protection under fault conditions.

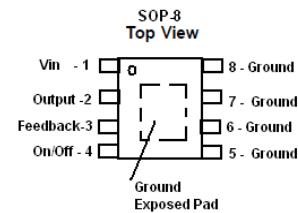

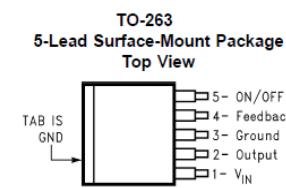

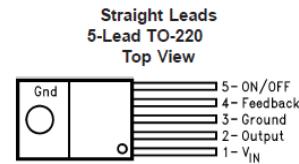

### FEATURES

- 3.3V, 5V, 12V, and adjustable output versions
- Adjustable version output voltage range, 1.2V to 57V
- $\pm 4\%$  maximum over line and load conditions
- Available in TO-220 and TO-263 packages and SOP-8 (for  $I_{load} < 2A$ )
- Guaranteed 3A output load current
- Input voltage range up to 60V
- Requires only 4 external components
- Excellent line and load regulation specifications
- 150 kHz fixed frequency internal oscillator
- Low power standby mode,  $I_{stb}$  typically 30  $\mu$ A
- High efficiency
- Thermal shutdown and current limit protection
- Output short protection by reduction of frequency by 3 times.

### APPLICATIONS

- Simple high-efficiency step-down (buck) regulator
- On-card switching regulators
- Efficient pre-regulator for linear regulators

## TEST CIRCUIT AND LAYOUT GUIDELINES

$V_{out} = V_{ref} * (1 + R_2/R_1)$ , where  $V_{ref} = 1.23V$ ;  $R_1$  between 1k and 5k.

FIGURE 1.

For minimal inductance and ground loops, the wires indicated by **heavy lines** should be wide printed circuit traces and kept as short as possible. Keep the FEEDBACK wiring away from the inductor flux.

$C_{ff} \sim 1$  to  $10nF$  – as option.
