

LT3021

Tripolar Overvoltage Protection for Network Interfaces

Revision:B

General Description

The LT3021 is a low capacitance transient surge arrestor designed for protection of high debit rate communication network. Its low capacitance avoids distorsion of the signal as it has been designed for T1/E1 and Ethernet networks.

Applications

Dedicated to dataline protection, this device provides a tripolar protection function. It ensure the same protection capability with the same breakdown voltage in both common and differential modes.

Features

- Tripolar crowbar protection
- Low capacitance
- Repetitive peak pulse current: $I_{pp}=30A$ (10/1000 μ s)
- Low holding current: $I_H=30mA$

SO-8

Electrical Parameter

Symbol	Parameter
V_{DRM}	Stand-off voltage
I_{DRM}	Leakage current VDRM
V_{BR}	Continuous reverse voltage
V_{BO}	Breakover voltage
I_H	Holding current
I_{BO}	Breakover current
I_{pp}	Peak pulse current
C	Capacitance
