

### Features:

- RoHS compliant
- •Long operating life
- Ideal for backlight and indicator
- •Various Colors brightness Available
- Moisture sensitivity level: 3

## Application:

- Backlight
- •Decoration lighting
- motormeter
- Indicator

## **Useful hint**

#### **Reflow Soldering Instructions**

- 1. Don't cause stress to the LEDs while it is exposed to high temperature.
- 2. The maximum number of reflow soldering passes is 2 times.
- 3. Reflow soldering is recommended. Other soldering methods are not recommended as they might cause damage to the product.

#### Precautions

#### 1. Storage:

•Moisture proof and anti-electrostatic package with moisture absorbent material is used, to keep moisture to aminimum.

•Before opening the package, the product should be kept at  $30^{\circ}$ C or less and humidity less than 60% RH, and beused within a year.

•After opening the package, the product should be stored at  $30^{\circ}$ C or less and humidity less than 10%RH, and besoldered within 24 hours (1day). It is recommended that the product be operated at the workshop condition of  $30^{\circ}$ C or less and humidity less than 60%RH.

•If the moisture absorbent material has fade away or the LEDs have exceeded the storage time, baking treatment should be performed based on the following condition:  $(70\pm5)^{\circ}$ C for 24 hours.

#### 2. Static Electricity:

Static electricity or surge voltage damages the LEDs. Damaged LEDs will show some unusual characteristic such as the forward voltage becomes lower, or the LEDs do not light at the low current. even not light.

All devices, equipment and machinery must be properly grounded. At the same time, it is recommended that wrist bands or anti-electrostatic gloves, anti-electrostatic containers be used when dealing with the LEDs.

#### 3. Vulcanization:

LED curing is due to sulfur being in bracket and the +1 price of silver in the chemical reaction generated Ag2S in the process. It will lead to the capacity of reflecting of silver layer reducing, light color temperature drift and serious decline ,seriously affecting the performance of the product.So we should take corresponding measures to avioding vulcanization, such as to avoid using sulphur volatile substances and keeping away from high sulphur content of the material.
