規格書 SPECIFICATION

產品名稱：

Product Name : QUARTZ CRYSTAL

型號：

Model : CFV-206

周波數：

Frequency : 60.003 KHz

客戶參考編號：

Customer's Ref. No.: National

CITIZEN WATCH CO., LTD.

西鐵城鐘錶有限公司

SPECIFICATION

1	型號 Type of Holder	CFV-206
2	公称周波数 Nominal Frequency	60.003Khz
3	振動方式 Mode of Vibration	TF
4	負載電容 Load Capacitance	12.5 pF
5	諧振阻抗 Equivalent Series Resistance	35KΩ~50KΩ
6	周波数容許偏差 Adjustment Tolerance	± 20 ppm Max. at 25°C
7	溫度特性 Tolerance over the Temperature Range	± ppm Max.
8	動作溫度範圍 Operating Temperature Range	-10°C~+60°C
9	保存溫度範圍 Storage Temperature Range	-40°C~+85°C
10	驅動功率 Level of Drive	1μW Max.
11	並列電容 Shunt Capacitance	0.8pF~1.7pF
12	絕緣抵抗 Insulation Resistance	500MΩ MIN / DC100±15V

外觀尺寸 Dimensions UNIT : mm

Reliability Test Items

Test Item		Test Method	Spec. No.
1. Mechanical Performance Tests			
1.1	Shock	Orient the sample in any attitude and drop it three times from a height of 75 cm onto a hardwood board with a thickness of 3 cm.	A
1.2	Vibration	Subject the sample to 1.5-minute cycles of frequencies of 10 to 500Hz and amplitudes of 1.5 mm or acceleration to 10G for two hours in each of the X, Y, and Z directions, for 6 hours in total.	A
1.3	Tensile Strength of Terminal	Apply a 1.0kg tensile load to each terminal and sustain it for 30±5 seconds.	A.C
1.4	Bending Strength of Terminal	Apply a 0.5kg load to one of the terminals, and after tilting the main unit for 90°, restore to its original attitude. Then, tilt it in an opposite direction for 90°, and restore to its original attitude. (See Fig. 1)	A.C
1.5	Solderability	Dip terminals in RMA flux for 5±0.5 sec. Under room temperature. Dip Terminals in a 230±5°C solder bath for 5±0.5 seconds. The solder shall leave an undipped terminal length of 2mm at their base.	D
1.6	Resistance to Soldering Heat	Dip Terminals in a 260±5°C solder bath for 10±0.5 seconds. The solder shall leave an undipped terminal length of 2mm at their base.	A
1.7	Leakage Test	Take measurements with a helium leakage detector.	E

2. Environmental Tests

2.1	Cold	Expose the sample in an inoperative mode to 240 hours in a -40°C.	A
2.2	Dry Heat	Expose the sample in an inoperative mode to 240 hours in a +85°C.	B
2.3	Damp Heat	Expose the Sample in an inoperative mode to 240 hours in a +65°C, and 95%RH.	B
2.4	Thermal Shock	Subject the sample to 5 temperature variation cycles at -40°C for 30 minutes and +100°C for the next 30 minutes in each cycle.	A

Specifications

No.	Specification
A	Any variation between the pre- and post-test frequencies shall remain within ±5ppm. The post-test equivalent series resistance shall remain within its specified tolerance range.
B	Any variation between the pre- and post-test frequencies shall remain within ±5ppm. The post-test equivalent series resistance shall remain within its specified tolerance range.
C	After each test, no visible damage shall be manifested, nor shall the hermetic seal break down.
D	At least 90% of each dipped area shall be covered by fresh solder.
E	$1 \times 10^{-2} \mu\text{Pa} \cdot \text{m}^3/\text{s}$ Max 以下

※Measurements shall be taken at 25±2°C, and after each test, the sample be exposed to one to two hours at 25±2°C.
