

## AM26LV32E Low-Voltage High-Speed Quadruple Differential Line Receiver With $\pm 15$ -KV IEC ESD Protection

### 1 Features

- Meets or Exceeds Standard TIA/EIA-422-B and ITU Recommendation V.11
- Operates From a Single 3.3-V Power Supply
- Switching Rates up to 32 MHz
- ESD Protection for RS422 Bus Pins  
(See [ESD Ratings](#))
- Low Power Dissipation: 27 mW Typ
- Open Circuit, Short Circuit, and Terminated Fail-Safe
- $\pm 7$ -V Common-Mode Input Voltage Range With  $\pm 200$ -mV Sensitivity
- Accepts 5-V Logic Inputs With 3.3-V Supply (Enable Inputs)
- Input Hysteresis: 35 mV Typ
- Pin-to-Pin Compatible With AM26C32, AM26LS32
- $I_{off}$  Supports Partial-Power-Down Mode Operation

### 2 Applications

- High-Reliability Automotive Applications
- Configuration Control/Print Support
- ATM and Cash Counters
- Smart Grid
- AC and Servo Motor Drives

### 3 Description

The AM26LV32E device consists of quadruple differential line receivers with 3-state outputs. This device is designed to meet TIA/EIA-422-B and ITU recommendation V.11 drivers with reduced supply voltage. The device is optimized for balanced bus transmission at switching rates up to 32 MHz. The 3-state outputs permit connection directly to a bus-organized system. The AM26LV32E has an internal fail-safe circuitry that prevents the device from putting an unknown voltage signal at the receiver outputs. In the open fail-safe, shorted fail-safe, and terminated fail-safe, a high state is produced at the respective output. This device is supported for partial-power-down applications using  $I_{off}$ .  $I_{off}$  circuitry disables the outputs, preventing damaging current back-flow through the device when it is powered down.

#### Device Information<sup>(1)</sup>

$\bar{G}$	12	I	Active-low select
GND	8	—	Ground
V <sub>CC</sub>	16	—	Power Supply

## 6 Specifications

### 6.1 Absolute Maximum Ratings

 over operating free-air temperature range (unless otherwise noted) <sup>(1)(2)</sup>

		MIN	MAX	UNIT	
V <sub>CC</sub>	Supply voltage <sup>(3)</sup>	-0.5	6	V	
V <sub>I</sub>	Input voltage	A or B inputs	-14	14	V
		G or $\bar{G}$ inputs	-0.5	6	
V <sub>ID</sub>	Differential input voltage <sup>(4)</sup>	-14	14	V	
V <sub>O</sub>	Output voltage	-0.5	6	V	
I <sub>O</sub>	Output current		±20	mA	
I <sub>IK</sub>	Input clamp current	V <sub>I</sub> < 0	-20	mA	
I <sub>OK</sub>	Output clamp current	V <sub>O</sub> < 0	-20	mA	
T <sub>J</sub>	Operating virtual junction temperature		150	°C	
T <sub>stg</sub>	Storage temperature	-65	150	°C	

- (1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions*. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) This device is designed to meet TIA/EIA-422-B and ITU.
- (3) All voltage values except differential input voltage are with respect to the network GND.
- (4) Differential input voltage is measured at the non-inverting input with respect to the corresponding inverting input.

### 6.2 ESD Ratings

		VALUE	UNIT	
V <sub>(ESD)</sub>	Electrostatic discharge	Human body model (HBM), per ANSI/ESDA/JEDEC JS-001 <sup>(1)</sup>	±15000	V
		IEC61000-4-2, Contact Gap Discharge	±8000	
		IEC61000-4-2, Air Gap Discharge	±15000	

- (1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process. Manufacturing with less than 500-V HBM is possible with the necessary precautions. Pins listed as ±15000 V may actually have higher performance.

### 6.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)

		MIN	NOM	MAX	UNIT
V <sub>CC</sub>	Supply voltage	3	3.3	3.6	V
V <sub>IH</sub>	High-level input voltage	2		5.5	V
V <sub>IL</sub>	Low-level input voltage	0		0.8	V
V <sub>IC</sub>	Common-mode input voltage	-7		7	V
V <sub>ID</sub>	Differential input voltage	-7		7	V
I <sub>OH</sub>	High-level output current			-5	mA
I <sub>OL</sub>	Low-level output current			5	mA
T <sub>A</sub>	Operating free-air temperature	-40		85	°C

### 6.4 Thermal Information

THERMAL METRIC <sup>(1)</sup>	AM26LV32E				UNIT	
	D (SOIC)	PW (TSSOP)	NS (SOP)	RGY (VQFN)		
	16 PINS	16 PINS	16 PINS	16 PINS		
R <sub>θJA</sub>	Junction-to-ambient thermal resistance	73.1	109	69	92	°C/W
R <sub>θJC(top)</sub>	Junction-to-case (top) thermal resistance	38.4	34	34	40	°C/W

- (1) For more information about traditional and new thermal metrics, see the [Semiconductor and IC Package Thermal Metrics](#) application report.

## 6.5 Electrical Characteristics

over recommended ranges of common-mode input, supply voltage, and operating free-air temperature (unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
$V_{IT+}$	Positive-going input threshold voltage, differential input				0.2	V
$V_{IT-}$	Negative-going input threshold voltage, differential input		-0.2			V
$V_{hys}$	Input hysteresis ( $V_{IT+} - V_{IT-}$ )			35		mV
$V_{IK}$	Input clamp voltage, G and $\bar{G}$	$I_I = -18$ mA			-1.5	V
$V_{OH}$	High-level output voltage	$V_{ID} = 200$ mV, $I_{OH} = -5$ mA	2.4	3.2		V
		$V_{ID} = 200$ mV, $I_{OH} = -100$ $\mu$ A	$V_{CC} - 0.1$			
$V_{OL}$	Low-level output voltage	$V_{ID} = -200$ mV, $I_{OL} = 5$ mA		0.17	0.5	V
		$V_{ID} = -200$ mV, $I_{OL} = 100$ $\mu$ A			0.1	
$I_{OZ}$	High-impedance state output current	$V_O = V_{CC}$ or GND			$\pm 50$	$\mu$ A
$I_{off}$	Output current with power off	$V_{CC} = 0$ V, $V_O = 0$ or 5.5 V			$\pm 100$	$\mu$ A
$I_I$	Line input current	Other input at 0 V	$V_I = 10$ V		1.5	mA
			$V_I = -10$ V		-2.5	
$I_I$	Enable input current, G and $\bar{G}$	$V_I = V_{CC}$ or GND			$\pm 1$	$\mu$ A
$r_i$	Input resistance	$V_{IC} = -7$ V to 7 V, Other input at 0 V	4	17		k $\Omega$
$I_{CC}$	Supply current (total package)	G, $\bar{G} = V_{CC}$ or GND, No load, Line inputs open		8	17	mA
$C_{pd}$	Power dissipation capacitance	One channel		150		pF

## 6.6 Switching Characteristics

over recommended operating free-air temperature range (unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	TYP <sup>(1)</sup>	MAX	UNIT
$t_{PLH}$	Propagation delay time, low- to high-level output	See <a href="#">Figure 2</a>	8	16	26	ns
$t_{PHL}$	Propagation delay time, high- to low-level output		8	16	26	ns
$t_t$	Transition time	See <a href="#">Figure 2</a>		5		ns
$t_{PZH}$	Output-enable time to high-level	See <a href="#">Figure 3</a>		17	40	ns
$t_{PZL}$	Output-enable time to low-level	See <a href="#">Figure 3</a>		10	40	ns
$t_{PHZ}$	Output-disable time from high-level	See <a href="#">Figure 3</a>		20	40	ns
$t_{PLZ}$	Output-disable time from low-level	See <a href="#">Figure 3</a>		16	40	ns
$t_{sk(p)}$	Pulse skew	See <a href="#">Figure 2</a> <a href="#">Figure 3</a>		4	6	ns
$t_{sk(o)}$	Pulse skew	See <a href="#">Figure 2</a> <a href="#">Figure 3</a>		4	6	ns
$t_{sk(pp)}$	Pulse skew (device to device)	See <a href="#">Figure 2</a> <a href="#">Figure 3</a>		6	9	ns
$f_{(max)}$	Maximum operating frequency	See <a href="#">Figure 2</a>		32		MHz

(1) All typical values are at  $V_{CC} = 3.3$  V,  $T_A = 25^\circ\text{C}$ .

## 8 Detailed Description

### 8.1 Overview

The AM26LV32E is a low-voltage, quadruple-differential line receiver that meets the necessary requirements for NSI TIA/EIA-422-B, TIA/EIA-423-B, and ITU Recommendation V.10 and V.11. This device allows a low power or low voltage MCU to interface with heavy machinery, subsystems and other devices through long wires of up to 1000 m, giving any design a reliable and easy to use connection. As with any RS422 interface, the AM26LV32E works in a differential voltage range, which enables very good signal integrity.

### 8.2 Functional Block Diagram

### 8.3 Feature Description

#### 8.3.1 $\pm 7$ -V Common-Mode Range With $\pm 200$ -mV Sensitivity

For a common-mode voltage varying from  $-7$  V to  $7$  V, the input voltage is acceptable in low ranges greater than 200 mV as a standard.

#### 8.3.2 Input Fail-Safe Circuitry

RS-485 specifies that the receiver output state should be logic high for differential input voltages of  $V_{AB} \geq +200$  mV and logic low for  $V_{AB} \leq -200$  mV. For input voltages in between these limits, a receiver's output state is not defined and can randomly assume high or low. Removing the uncertainty of random output states, modern transceiver designs include internal biasing circuits that put the receiver output into a defined state (typically high) in the absence of a valid input signal. A loss of input signal can be caused by:

- an open circuit caused by a wire break or the unintentional disconnection of a transceiver from the bus
- a short circuit due to an insulation fault, connecting both conductors of a differential pair to one another
- an idle bus when none of the bus transceivers are active.

An open circuit caused by a wire break or the unintentional disconnection of a transceiver from the bus. The AM26LV32E has an internal circuit that ensures functionality during an open, terminated or short failure.

#### 8.3.3 Active-High and Active-Low

The device can be configured using the  $G$  and  $\bar{G}$  logic inputs to select receiver output. The high voltage or logic 1 on the  $G$  pin, allows the device to operate on an active-high and having a low voltage or logic 0 on the  $\bar{G}$  enables active low operation. These are simply a way to configure the logic to match that of the receiving or transmitting controller or microprocessor.

## 8.4 Device Functional Modes

### 8.4.1 Enable and Disable

The receivers implemented in these RS422 devices can be configured using the G and  $\bar{G}$  pins to be enabled or disabled. This allows users to ignore or filter out transmissions as desired.

**Table 1. Function Table (Each Driver)**

DIFFERENTIAL INPUT	ENABLES		OUTPUT
	G	$\bar{G}$	
$V_{ID} \geq 0.2\text{ V}$	H	X	H
	X	L	H
$-0.2\text{ V} < V_{ID} < 0.2\text{ V}$	H	X	?
	X	L	?
$V_{ID} \leq -0.2\text{ V}$	H	X	L
	X	L	L
Open, shorted, or terminated	H	X	H

## 9 Application and Implementation

### NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

### 9.1 Application Information

When designing a system that uses drivers, receivers, and transceivers that comply with RS-422 or RS-485, proper cable termination is essential for highly reliable applications with reduced reflections in the transmission line. Because RS-422 allows only one driver on the bus, if termination is used, it is placed only at the end of the cable near the last receiver. In general, RS-485 requires termination at both ends of the cable. Factors to consider when determining the type of termination usually are performance requirements of the application and the ever-present factor, cost. The different types of termination techniques discussed are unterminated lines, parallel termination, ac termination, and multipoint termination. Laboratory waveforms for each termination technique (except multipoint termination) illustrate the usefulness and robustness of RS-422 (and, indirectly, RS-485). Similar results can be obtained if 485-compliant devices and termination techniques are used. For laboratory experiments, 100 feet of 100- $\Omega$ , 24-AWG, twisted-pair cable (Bertek) was used. A single driver and receiver, TI AM26LV31E and AM26LV32E, respectively, were tested at room temperature with a 3.3-V supply voltage. Two plots per termination technique are shown. In each plot, the top waveform is the driver input and the bottom waveform is the receiver output. To show voltage waveforms related to transmission-line reflections, the first plot shows output waveforms from the driver at the start of the cable; the second plot shows input waveforms to the receiver at the far end of the cable.

### 9.2 Typical Application

**Figure 4. Differential Terminated Configuration**

#### 9.2.1 Design Requirements

Resistor and capacitor (if used) termination values are shown for each laboratory experiment, but vary from system to system. For example, the termination resistor,  $R_T$ , must be within 20% of the characteristic impedance,  $R_{OUT}$ , of the cable and can vary from about 80  $\Omega$  to 120  $\Omega$ .

#### 9.2.2 Detailed Design Procedure

Figure 4 shows a configuration with  $R_T$  as termination. Although reflections are present at the receiver inputs at a data signaling rate of 200 kbps with no termination, the RS-422-compliant receiver reads only the input differential voltage and produces a clean signal at the output.

## Typical Application (continued)

### 9.2.3 Application Curve

Figure 5. Differential 120-Ω Terminated Output Waveforms (CAT 5E Cable)

## 10 Power Supply Recommendations

Place 0.1-μF bypass capacitors close to the power-supply pins to reduce errors coupling in from noisy or high-impedance power supplies.

## 11 Layout

### 11.1 Layout Guidelines

For best operational performance of the device, use good PCB layout practices, including:

- Noise can propagate into analog circuitry through the power pins of the circuit as a whole, as well as the operational amplifier. Bypass capacitors are used to reduce the coupled noise by providing low impedance power sources local to the analog circuitry.
  - Connect low-ESR, 0.1-μF ceramic bypass capacitors between each supply pin and ground, placed as close to the device as possible. A single bypass capacitor from V+ to ground is applicable for single supply applications.
- Separate grounding for analog and digital portions of circuitry is one of the simplest and most-effective methods of noise suppression. One or more layers on multilayer PCBs are usually devoted to ground planes. A ground plane helps distribute heat and reduces EMI noise pickup. Make sure to physically separate digital and analog grounds, paying attention to the flow of the ground current.
- To reduce parasitic coupling, run the input traces as far away from the supply or output traces as possible. If it is not possible to keep them separate, it is much better to cross the sensitive trace perpendicular as opposed to in parallel with the noisy trace.
- Place the external components as close to the device as possible. Keeping RF and RG close to the inverting input minimizes parasitic capacitance.
- Keep the length of input traces as short as possible. Always remember that the input traces are the most sensitive part of the circuit.
- Consider a driven, low-impedance guard ring around the critical traces. A guard ring can significantly reduce leakage currents from nearby traces that are at different potentials.

(1) The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBSELETE:** TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

**RoHS Exempt:** TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

**Green:** TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=100ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "-" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

<sup>(6)</sup> Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

4220204/A 02/2017

NOTES: (continued)

8. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release. IPC-7525 may have alternate design recommendations.
9. Board assembly site may have different recommendations for stencil design.

## MECHANICAL DATA

NS (R-PDSO-G\*\*)

PLASTIC SMALL-OUTLINE PACKAGE

14-PINS SHOWN

- NOTES:
- A. All linear dimensions are in millimeters.
  - B. This drawing is subject to change without notice.
  - C. Body dimensions do not include mold flash or protrusion, not to exceed 0,15.

RGY (R-PVQFN-N16)

PLASTIC QUAD FLATPACK NO-LEAD

4203539-3/1 06/2011

- NOTES:
- All linear dimensions are in millimeters. Dimensioning and tolerancing per ASME Y14.5M-1994.
  - This drawing is subject to change without notice.
  - QFN (Quad Flatpack No-Lead) package configuration.
  - The package thermal pad must be soldered to the board for thermal and mechanical performance.
  - See the additional figure in the Product Data Sheet for details regarding the exposed thermal pad features and dimensions.
  - Pin 1 identifiers are located on both top and bottom of the package and within the zone indicated. The Pin 1 identifiers are either a molded, marked, or metal feature.
  - Package complies to JEDEC MO-241 variation BA.

RGY (R-PVQFN-N16)

PLASTIC QUAD FLATPACK NO-LEAD

**THERMAL INFORMATION**

This package incorporates an exposed thermal pad that is designed to be attached directly to an external heatsink. The thermal pad must be soldered directly to the printed circuit board (PCB). After soldering, the PCB can be used as a heatsink. In addition, through the use of thermal vias, the thermal pad can be attached directly to the appropriate copper plane shown in the electrical schematic for the device, or alternatively, can be attached to a special heatsink structure designed into the PCB. This design optimizes the heat transfer from the integrated circuit (IC).

For information on the Quad Flatpack No-Lead (QFN) package and its advantages, refer to Application Report, QFN/SON PCB Attachment, Texas Instruments Literature No. SLUA271. This document is available at [www.ti.com](http://www.ti.com).

The exposed thermal pad dimensions for this package are shown in the following illustration.

Bottom View

Exposed Thermal Pad Dimensions

4206353-3/P 03/14

NOTE: All linear dimensions are in millimeters

PLASTIC QUAD FLATPACK NO-LEAD

4208122-3/P 03/14

- NOTES:
- A. All linear dimensions are in millimeters.
  - B. This drawing is subject to change without notice.
  - C. Publication IPC-7351 is recommended for alternate designs.
  - D. This package is designed to be soldered to a thermal pad on the board. Refer to Application Note, Quad Flat-Pack QFN/SON PCB Attachment, Texas Instruments Literature No. SLUA271, and also the Product Data Sheets for specific thermal information, via requirements, and recommended board layout. These documents are available at [www.ti.com](http://www.ti.com) <<http://www.ti.com>>.
  - E. Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Refer to IPC 7525 for stencil design considerations.
  - F. Customers should contact their board fabrication site for minimum solder mask web tolerances between signal pads.
