

PJ75ALXXSQ Series Low Dropout Regulators

Description

The PJ75ALXXSQ series is a set of three-terminal low power high voltage regulators implemented in CMOS technology. They allow input voltages as high as 36V. They are available with several fixed output voltages ranging from 2.8V to 5.0V. Because of the low power dissipation, PJ75ALXXSQ are widely used in a variety of equipment such as audio device, video device, communication device and so on.

Features
