1. 適用範圍 Specification

1-1 本承認書僅適用本公司生產之各種碳膜固定電阻器 (1/8W、1/6W、1/4W、1/2W、1W、2W、3W) 及其小型化之成品規格。

The specification is only suitable for Carbon Film Fixed Resistors(1/8W、1/6W、1/4W、1/2W、1W、2W、3W)and there are small size manufactured by SHI MENG ELECTRONIC CO., LTD.

1-2 參考標準 Applicable specification

本承認書參考《JIS C5201-2011》和《GB/T 5729-2003/IEC 60115-1:2001》

The specification Applicable specification 《JIS C5201-2011》 and 《GB/T 5729-2003/IEC 60115-1:2001》

1-3 產品符合 RoHS 及 REACH 法規的最新環保要求。

Products meet the latest environmental requirements of RoHS and REACH regulations.

2. 特性 Feature

2-1 高品質、低成本 High quality performance、Great economy

2-2 適用自動化插件 Automatically insertable

3. 品名 Part Number

依據其種類，分別注明額定功率、容許差、公稱電阻值和形狀。

According the Resistors type, To mark the Rated power, Tolerance, Resistance value, and forming type.

例(e.g) :	RD	1/4W	J($\pm 5\%$)	100Ω	T52

	Type	Rated power	Tolerance	Resistance	Forming

4. 結構圖 Construction

- a) 鍍錫銅導線 Tinned copper lead wire (注：可按要求提供CP線引腳)
- b) 鍍錫鐵帽 Tin-plated steel caps
- c) 高穩定性導電膜 High stability Electric conduction film
- d) 高熱傳導瓷棒 High heat exchanged ceramic base
- e) 環氧樹脂塗料 Epoxy resin coating
- f) 色環標示 Color ring Mark

5. 術語 Glossary

5-1. 標稱阻值：電阻器的設計電阻值，通常標注在電阻器上。

Rated resistance : Designed resistance value usually indicated on the resistor.

5-2. 額定環境溫度：電阻器在額定功率下可持續工作的最高環境溫度。請注意如果電阻器安裝在設備內部，那麼此處所謂的環境溫度並非設備周圍的溫度，而是設備內部、電阻器周圍的溫度。

Rated Ambient Temperature : Maximum ambient temperature at which the power rating may be applied continuously. The rated ambient temperature refers to the temperature around the resistor mounted inside the equipment, not to the air temperature outside the equipment.

5-3. 額定功率：在 70°C 環境溫度下進行耐久性試驗，而且阻值變化不超過該試驗的允許值時所允許的最大功率。

Rated power : At 70 °C ambient temperature durability test, and the change in resistance does not exceed the value of the test allows the maximum power allowed.

5-4. 降功率曲線：額定功率系適應在周圍溫度 70°C 可以連續負載的最大功率，但額定環境溫度如超過 70°C 時之額定電力則依圖的降功率曲線實施。

Rated power is maximum power which can be continuously loaded at specified ambient temperature 70 °C, however when Rated Ambient Temperature exceeds 70°C, rated power should be determined from the derating curve.

5-5. 額定電壓：額定環境溫度或端子部溫度下可連續施加的最大直流電壓或交流電壓（商用頻率實效值），用額定功率和公稱電阻值，按以下公式計算。但額定電壓不可超過最大工作電壓。

Rated Voltage : Maximum allowable D.C. or A.C. voltage(rms), capable to be continuously applied to a resistor or a resistor element under the rated ambient temperature or terminal part temperature. It shall be calculated from the rated power and nominal resistance using the following formula. The rated voltage shall not exceed the max. working voltage.

$$\begin{array}{ll} U: \text{電壓} & I: \text{電流} \\ P: \text{功率} & R: \text{阻值} \end{array} \quad U = \sqrt{P \times R} \quad I = \frac{U}{R}$$

5-6. 臨界阻值：在不超過最高使用電壓的情況下可施加額定功率的最大公稱電阻值。在臨界電阻值下，額定電壓等於最大工作電壓。

Critical Resistance : The maximum nominal resistance value at which the rated power can be applied without exceeding the maximum working voltage. The rated voltage is equal to the max. working voltage at the critical resistance value.

5-7. 最高使用電壓：電阻器或電阻元件上可連續施加的最大直流電壓或交流電壓（商用頻率實效值）。但在臨界電阻值以下，可以施加的最大電壓為額定電壓。

Maximum Working Voltage : Maximum D.C. or A.C. voltage(rms) that can be continuously applied to the terminations of a resistor. However, the maximum value of the applicable voltage is the rated voltage at the critical resistance value or lower.

5-8. 過負荷電壓：在短時間過載試驗中可連續施加5秒鐘的電壓，一般為額定電壓的2.5倍，但不可超過最大過載電壓。

Allowable voltage : which is applied in 5 sec. under short time overload test. Overload voltage shall be 2.5 times of rated voltage or max. overload voltage, whichever is lower.

12. 使用注意事項 Precautions for Use

12.1 碳膜電阻的導電層主要成分为碳，阻值越高膜層越薄，當阻值高於幾百 K 歐姆時，膜層厚度可能已經達到納米級，此時產品的可靠性會相對降低，尤其是高濕度的環境下，容易出現偶發性的失效異常。因此，高可靠性要求的產品設計，請勿為了方便而採用超高阻值。

Carbon film resistor layer of conductive carbon as a main component, the higher resistance film thinner, when high resistance in a few hundred K ohm, film thickness may has reached nanometer level. At this time the reliability of the product will relatively lower, especially in high humidity environment, prone to occasional abnormal failure. Therefore, the product design of high reliability requirements, do not for convenience using ultra high resistance.

12.2 超高阻值部分建議使用我司的 MG 厚膜玻璃袖電阻（高功率要求適用）或 CHIP 晶片電阻（低功率要求適用），MG 電阻高阻段的耐溫、耐濕、耐壓、耐脈沖、耐腐蝕等方面的可靠性是眾電阻產品之首。

Ultra high resistance part recommend the use of our MG High voltage surge resistor or chip resistors to replace the precision metal film resistors, Mg resistor of high temperature, humidity, pressure resistance, pulse, corrosion resistance and other aspects of the reliability is the public resistance.

12.3 低阻及超低阻的碳膜電阻如線路要求耐電流能力要求高時，請參考我司的 KN 繞線電阻，其在溫度係數、耐脈沖性能方面有很大的優越性。

Low resistance and ultra low resistance of the carbon film resistance, such as the line requirements of resistance to high current capacity requirements, please refer to our KN Wire Wound Resistors, which has a great advantage in the temperature coefficient, pulse resistance.

12.4 請勿在高阻值碳膜電阻表面使用膠類產品固定或灌封。膠類一方面降低了產品的散熱性能，另方面整機廠常用的 AB 膠類如酸堿性未控制好或未完全乾燥的情況下通電使用，會造成電阻導電膜與酸堿性分子產生電化學反應而出現偶發性的失效，俗稱電阻皮膜被“電蝕”。多年的經驗告訴我們，使用環氧膠類比有機硅膠類出現異常的幾率會更大。

Do not use plastic products fixed or potting in the high resistance carbon film resistor surface. Glue on the one hand reduces the radiation performance of the product, on the other hand, the whole plant commonly used AB class such as pH do not control or not completely dry the use of electricity, caused by conductive film and acid and alkali resistance molecular produce electrochemical reaction and occasional failure, commonly known as the electric resistance of coating was electrical erosion. Years of experience tells us that the use of epoxy silicone glue analogy abnormality rate will be greater.

12.6 碳膜電阻推出了無腳型產品，可以用 SMT 自動貼片安裝，滿足波峰焊和迴流焊工藝。此款電阻為非切腳型生產，不存在切腳時端帽出現鬆動的隱患，經過酸洗、電鍍錫等工藝，100%短時間負載測試，可靠性優異。具體請參考我司 MECF-MELF 產品。

The carbon film resistor is introduced with no foot type products, which can be installed with SMT automatic patch, which can satisfy the process of wave soldering and reflow soldering. The resistance of the non cutting foot type production, does not exist when the cut foot cap appears loose hidden danger, after pickling, electroplating tin and other processes, 100% short time load test, excellent reliability. Specific please refer to our MECF-MELF products.
