## Over-Voltage Protection Load Switch

### Descriptions

The WS3210 features a low  $R_{ON}$  internal High Voltage Switch and an input range of absolute maximum 30V. An internal input clamp is capable of shunting surge voltage >80V, protecting downstream components and enhancing system robustness. The WS3210 features Over-Voltage Protection (OVP) that shuts off the internal Switch if input voltage exceeds the Fixed OVP threshold 5.85V / 10.5V / 14.0V. The off-state Switch can disconnect the input pin to output pin and protect output from the input high voltage stress. Integrated Over-Temperature Protection (OTP) also shuts off the Switch to protect the device.

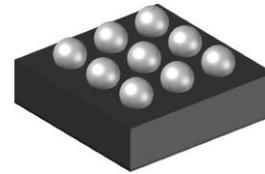

The WS3210 is available in 1.4mm x 1.4mm CSP-9L package. Standard product is Pb-free and Halogen-free.
