## TYPICAL APPLICATIONS

Pins 6 and 7 show an open collector. Mount resistor  $R_p$  shown by the following equation.

$$R_p = (V^+_{MIN} - 0.2) / 0.3 \text{ (k}\Omega\text{)}$$

Resistor  $R_p$  to pin 7 is omissible, if pin 6 only is used. But resistor  $R_p$  to pin 6 should be put when Out 2 only is used.  $V^+_{MIN}$  is minimum supply voltage.
