

Smart High-Side Power Switch for Industrial Applications

Two Channels: 2 x 90mΩ

Status Feedback

Product Summary

Operating Voltage	V_{bb}	5.5...40V	
Active channels		one	two parallel
On-state Resistance	R_{ON}	90mΩ	45mΩ
Nominal load current	$I_{L(NOM)}$	3.7A	7.4A
Current limitation	$I_{L(SCr)}$	12A	12A
Operating Temperature	T_a	-30 ... +85°C	

Package

Green Product (RoHS compliant)

General Description

- N channel vertical power MOSFET with charge pump, ground referenced CMOS compatible input and diagnostic feedback, monolithically integrated in Smart SIPMOS® technology.
- Providing embedded protective functions

Applications

- µC compatible high-side power switch with diagnostic feedback for 12V and 24V grounded loads in industrial applications
- All types of resistive, inductive and capacitive loads
- Most suitable for loads with high inrush currents, so as lamps
- Replaces electromechanical relays, fuses and discrete circuits

Basic Functions

- Very low standby current
- CMOS compatible input
- Improved electromagnetic compatibility (EMC)
- Fast demagnetization of inductive loads
- Stable behaviour at undervoltage
- Wide operating voltage range
- Logic ground independent from load ground

Protection Functions

- Short circuit protection
- Overload protection
- Current limitation
- Thermal shutdown
- Overvoltage protection (including load dump) with external resistor
- Reverse battery protection with external resistor
- Loss of ground and loss of V_{bb} protection
- Electrostatic discharge protection (ESD)

Diagnostic Function

- Diagnostic feedback with open drain output
- Open load detection in OFF-state
- Feedback of thermal shutdown in ON-state

¹⁶⁾ Requires a 150 Ω resistor in GND connection. The reverse load current through the intrinsic drain-source diode has to be limited by the connected load. Power dissipation is higher compared to normal operating conditions due to the voltage drop across the drain-source diode. The temperature protection is not active during reverse current operation! Input and Status currents have to be limited (see max. ratings page 3 and circuit page 8).

¹⁷⁾ If ground resistors R_{GND} are used, add the voltage drop across these resistors.

¹⁸⁾ not subject to production test, specified by design

(each channel)

	IN	OUT	ST
Normal operation	L H	L H	H H
Open load	L H	Z H	L ¹⁹⁾ H
Overtemperature	L H	L L	H L

L = "Low" Level X = don't care Z = high impedance, potential depends on external circuit
H = "High" Level Status signal valid after the time delay shown in the timing diagrams

Parallel switching of channel 1 and 2 is easily possible by connecting the inputs and outputs in parallel (see truth table). If switching channel 1 to 2 in parallel, the status outputs ST1 and ST2 have to be configured as a 'Wired OR' function with a single pull-up resistor.

Terms

Leadframe (V_{bb}) is connected to pin 6,12

External R_{GND} optional; single resistor $R_{\text{GND}} = 150 \, \Omega$ for reverse battery protection up to the max. operating voltage.

¹⁹⁾ L, if potential at the Output exceeds the OpenLoad detection voltage

GND disconnect with GND pull up

Any kind of load. If $V_{GND} > V_{IN} - V_{IN(T+)}$ device stays off
Due to $V_{GND} > 0$, no V_{ST} = low signal available.

Vbb disconnect with energized inductive load

For inductive load currents up to the limits defined by Z_L (max. ratings and diagram on page 9) each switch is protected against loss of V_{bb} .

Consider at your PCB layout that in the case of V_{bb} disconnection with energized inductive load all the load current flows through the GND connection.

Inductive load switch-off energy dissipation

Energy stored in load inductance:

$$E_L = \frac{1}{2} \cdot L \cdot I_L^2$$

While demagnetizing load inductance, the energy dissipated in PROFET is

$$E_{AS} = E_{bb} + E_L - E_R = \int V_{ON(CL)} \cdot i_L(t) dt,$$

with an approximate solution for $R_L > 0 \Omega$:

$$E_{AS} = \frac{I_L \cdot L}{2 \cdot R_L} (V_{bb} + |V_{OUT(CL)}|) \ln \left(1 + \frac{I_L \cdot R_L}{|V_{OUT(CL)}|} \right)$$

Maximum allowable load inductance for a single switch off (one channel)⁴⁾

$L = f(I_L)$; $T_{j,start} = 150^\circ\text{C}$, $V_{bb} = 12\text{ V}$, $R_L = 0 \Omega$

Z_L [mH]

Typ. on-state resistance
 $R_{ON} = f(V_{bb}, T_j); I_L = 2\text{ A}, I_N = \text{high}$
 $R_{ON} [\text{m}\Omega]$

Typ. standby current
 $I_{bb(\text{off})} = f(T_j); V_{bb} = 9\text{...}34\text{ V}, I_{N1,2} = \text{low}$
 $I_{bb(\text{off})} [\mu\text{A}]$

Green Product (RoHS compliant)

To meet the world-wide customer requirements for environmentally friendly products and to be compliant with government regulations the device is available as a green product. Green products are RoHS-Compliant (i.e Pb-free finish on leads and suitable for Pb-free soldering according to IPC/JEDEC J-STD-020).
