Description

The FPF2895V features a 28 V and 5 A rated current limit power switch, which offers Over-Current Protection (OCP), Over-Voltage Protection (OVP), and True Reverse Current Block (TRCB) to protect system. It has low On-resistance of typical 27 Ωm with WL-CSP can operate over an input voltage range of 4 V to 22 V.

The FPF2895V supports ±15% of current limit accuracy, over-current range of 500 mA to 2 A and ±10% of current limit accuracy, over-current range of 2 A to 5 A , flexible operations such as selectable OVP, selectable ON polarity and selectable OCP behavior, which can be optimized according to system requirements.

The FPF2895V is available in a 24-bump, 1.67 mm x 2.60 mm Wafer-Level Chip-Scale Package (WL-CSP) with 0.4 mm pitch.

3. Guaranteed by characterization and design, not production test.

4. To avoid output voltage is coupled to high during cold start, the slew rate of V_{in} should be less than 10 mV/ μs

Setting Current Limit

FPF2895V current limit is set with an external resistor connected between I_{SET} and GND. This resistor is selected using the following equation:

$$R_{SET}(\text{k}\Omega) = \left(\frac{4674.89}{I_{SET}(\text{mA})} \right)^{1/1.0326} \quad (\text{eq. 1})$$

Resistor tolerance of 1% or less is recommended. 10% tolerance can be achieved only when ILIM is set to larger than 2 A.
