Note 1: The Maximum steady state usable output current and input voltage are very dependent on the heating sinking and/or lead temperature length of the package. The date above represent pulse test conditions with junction temperatures as indicated at the initiation of test.

Note 2: Power dissipation < 0.75W.

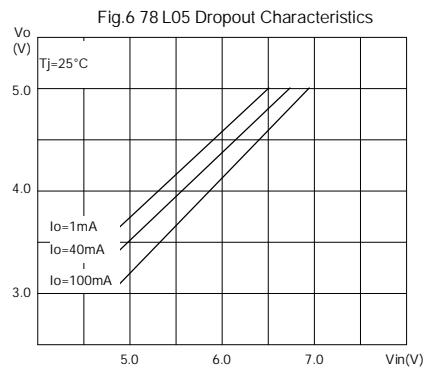

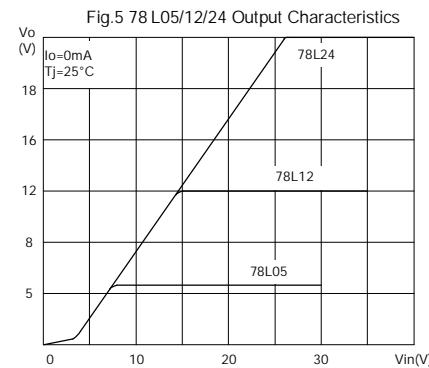

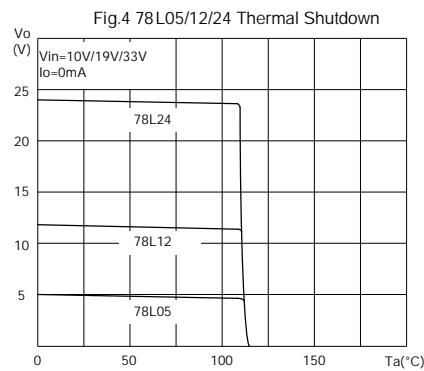

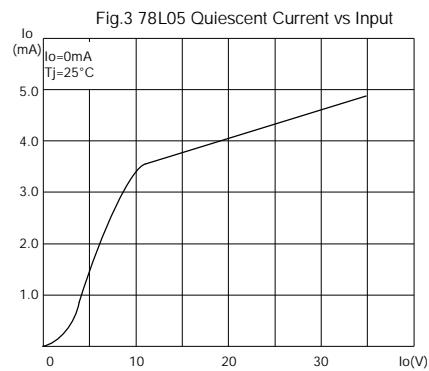

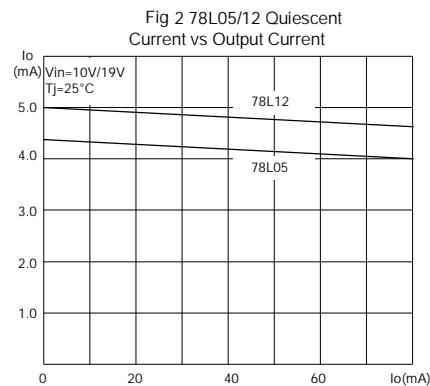

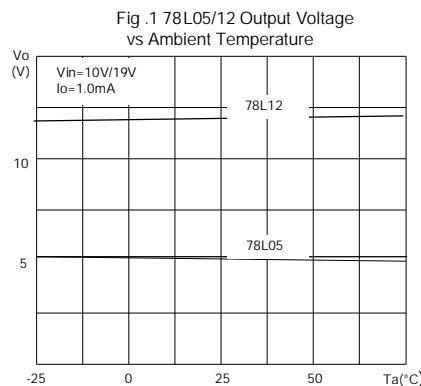

Note 3: Output voltage of 78LXXA.

TYPICAL APPLICATION

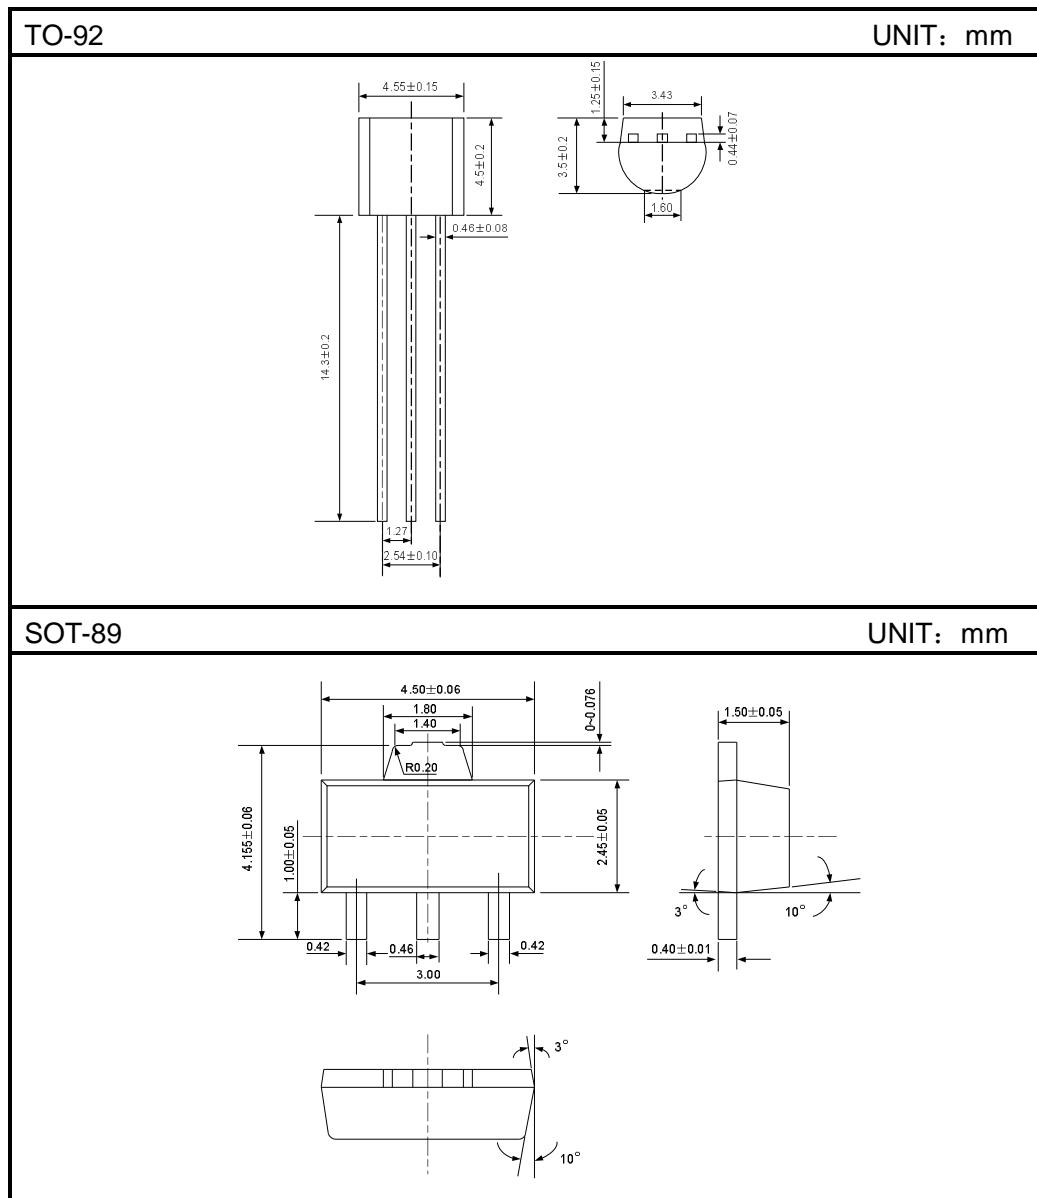

Note 1: To specify an output voltage, substitute voltage value for "XX".

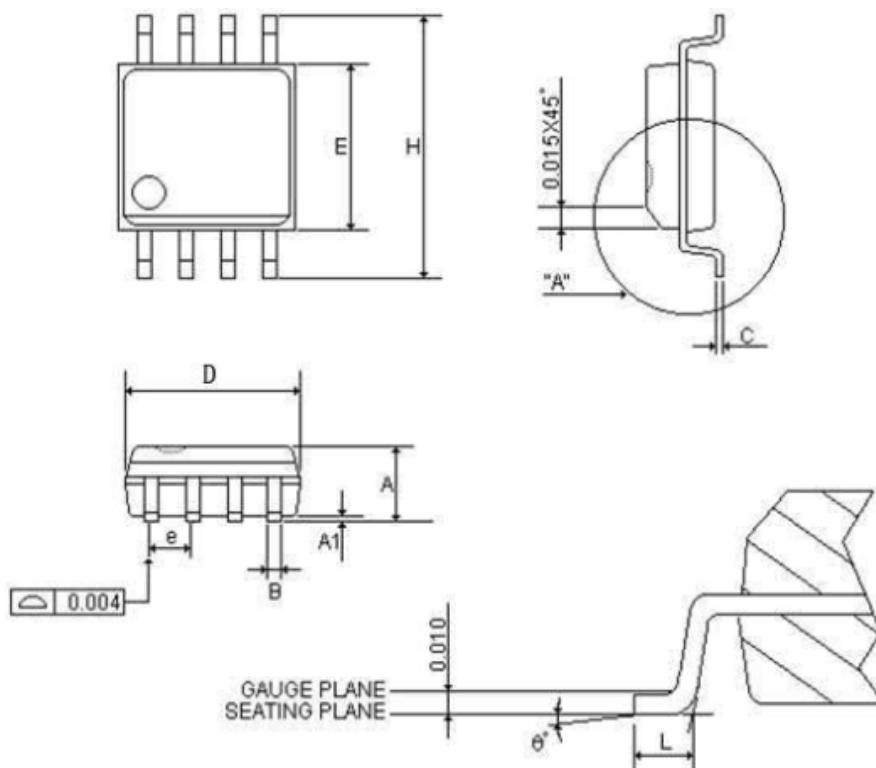

Note 2: Bypass capacitors are recommended for optimum stability and transient response and should be located as close as possible to the regulators.
