# Single H-Bridge Motor Driver

## GENERAL DESCRIPTION

The SGM42609 is a motor driver device with one integrated H-bridge that can run one DC brush motor solenoid or other inductive load. It can be used in a variety of applications such as toothbrushes and battery-powered toys.

The H-bridge consists of four N-MOSFETs to drive the motor windings. The SGM42609 can supply up to 2A peak or 1.5A RMS output current (with proper heatsinking at  $V_{CC} = 5V$  and  $T_A = +25^\circ C$ ). At lower  $V_{CC}$  voltages, the current capability is decreased slightly.

Internal protection functions are provided for over-current protection (OCP), power supply under-voltage lockout (UVLO), charge pump under-voltage lockout (CPUV) and over-temperature protection (OTP). Fault conditions are indicated by the nFAULT pin.

Sleep mode allows saving power when the device is not driving the motor. The SGM42609 will enter into sleep mode when IN1 and IN2 are low for more than  $t_{sleep}$ .

The SGM42609 is available in Green MSOP-10 and TDFN-3x3-10L packages. It operates over an ambient temperature range of -40°C to +125°C.

### OVERSTRESS CAUTION

Stresses beyond those listed in Absolute Maximum Ratings may cause permanent damage to the device. Exposure to absolute maximum rating conditions for extended periods may affect reliability. Functional operation of the device at any conditions beyond those indicated in the Recommended Operating Conditions section is not implied.

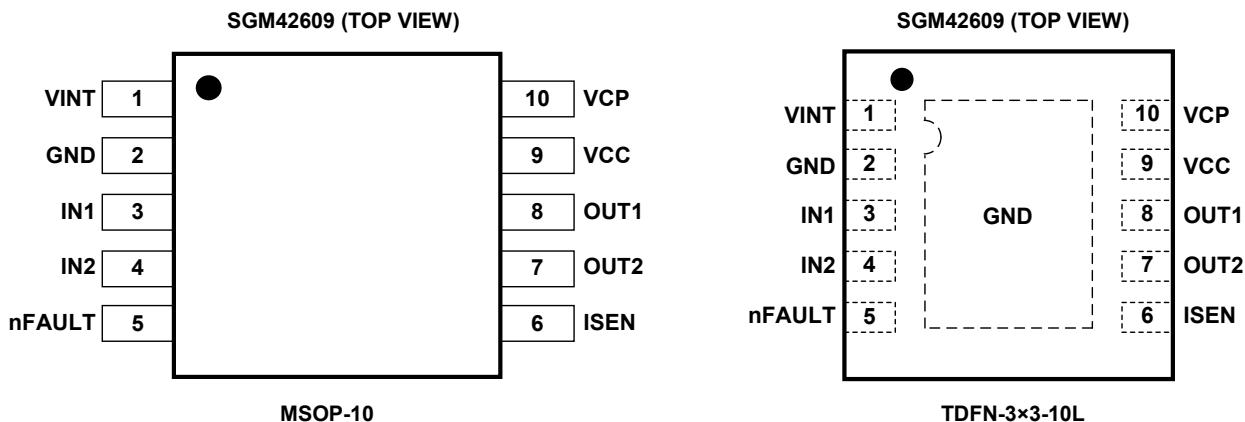

### ESD SENSITIVITY CAUTION

This integrated circuit can be damaged if ESD protections are not considered carefully. SGMICRO recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage. ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because even small parametric changes could cause the device not to meet the published specifications.
