AH1117

DESCRIPTION

AH1117 is a series of low dropout three-terminal regulators with a typical dropout of 1.3V at 1A load current.
Besides fixed voltage version (Vout = 1.2V, 1.5,,1.8V, 2.5V, 3.3V, 5V), AH1117 has an adjustable version that can provide an output voltage from 1.25 to 12V with two external resistors.

AH1117 offers thermal shut down functions to assure stability of chip and power system. Trimming technique is used to guarantee output voltage accuracy within ±2%.
AH1117 is available in SOT-223, TO-252 power packages.

FEATURES

- Maximum output current is 1A
- Range of operation input voltage: Max 15V
- Line regulation: 0.1%/V (typ.)
- Load regulation: 10mV (typ.)
- Environment Temperature: -20°C~85°C

APPLICATIONS

- DVB
- Computer Mother Board, Graphic Card
- LCD Monitor and LCD TV
- DVD Decode Board
- ADSL Modem
- Post Regulators for Switching Supplies

Note2: Load current smaller than minimum load current of AH1117-ADJ will lead to unstable or oscillation output.

BLOCK DIAGRAM
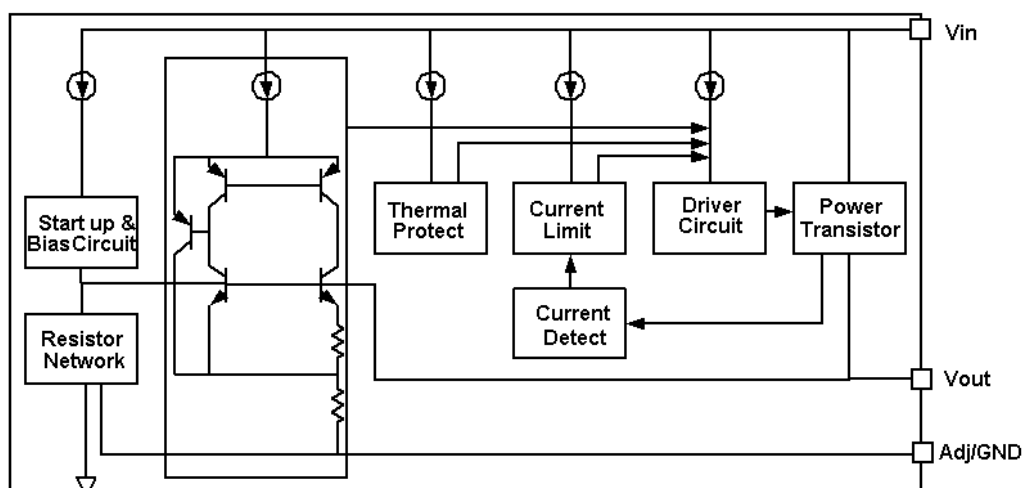

DETAILED DESCRIPTION

AH1117 is a series of low dropout voltage, three terminal regulators. Its application circuit is very simple:
the fixed version only needs two capacitors and the adjustable version only needs two resistors and two capacitors to work. It is composed of some modules including start-up circuit, bias circuit, bandgap, thermal shutdown, current limit, power transistors and its driver circuit and so on.

The thermal shut down modules can assure chip and its application system working safety when the junction temperature is larger than 140°C.

The bandgap module provides stable reference voltage, whose temperature coefficient is compensated by careful design considerations. The temperature coefficient is under 100 ppm/°C. And the accuracy of output voltage is guaranteed by trimming technique.

TYPICAL APPLICATION

AH1117 has an adjustable version and six fixed versions (1.2V, 1.5V,1.8V, 2.5V, 3.3V and 5V)
Fixed Output Voltage Version
Application circuit of AH1117 fixed version

1) *Recommend using 10uF tan capacitor as bypass capacitor (C1) for all application circuit.*
2) *Recommend using 10uF tan capacitor to assure circuit stability.*

Adjustable Output Voltage Version

AH1117-ADJ provides a 1.25V reference voltage. Any output voltage between 1.25V~12V can be achievable by choosing two external resistors (schematic is shown below), R1 and R2

Application Circuit of AH1117-ADJ

The output voltage of adjustable version follows the equation: $Vout=1.25\times(1+R2/R1)+IAdj\times R2$. We can ignore IAdj because IAdj (about 50uA) is much less than the current of R1 (about 2~10mA).

1) To meet the minimum load current (>10mA) requirement, R1 is recommended to be 125ohm or lower. As AH1117-ADJ can keep itself stable at load current about 2mA, R1 is not allowed to be higher than 625ohm.

2) Using a bypass capacitor (C_{ADJ}) between the ADJ pin and ground can improve ripple rejection. This bypass capacitor prevents ripple from being amplified as the output voltage is increased. The impedance of C_{ADJ} should be less than R1 to prevent ripple from being amplified. As R1 is normally in the range of 100Ω~500Ω, the value of C_{ADJ} should satisfy this equation: $1/(2\pi \times f_{ripple} \times C_{ADJ})<R1$.
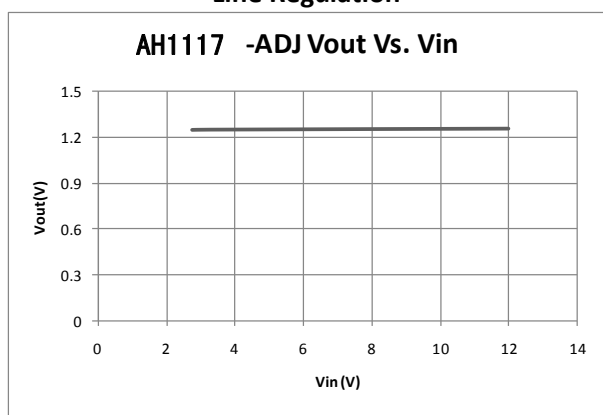

THERMAL CONSIDERATIONS

We have to take heat dissipation into great consideration when output current or differential voltage of input and output voltage is large. Because in such cases, the power dissipation consumed by AH1117 is very large. AH1117 series uses SOT-223 package type and its thermal resistance is about 20°C/W. And the copper area of application board can affect the total thermal resistance. If copper area is 5cm*5cm (two sides), the resistance is about 30°C/W. So the total thermal resistance is about 20°C/W + 30°C/W. We can decrease total thermal resistance by increasing copper area in application board. When there is no good heat dissipation copper are in PCB, the total thermal resistance will be as high as 120°C/W, then the power dissipation of AH1117 could allow on itself is less than 1W. And furthermore, AH1117 will work at junction temperature higher than 125°C under such condition and no lifetime is guaranteed.
TYPICAL PERFORMANCE CHARACTERISTICS

T=25°C unless specified.
