DESCRIPTION

The RS4G08 quadruple 2-input positive-AND gate is designed for 1.65V to 5.5V V_{CC} operation.

The RS4G08 device performs the Boolean function $Y=A \cdot B$ or $Y= \overline{A} + \overline{B}$ in positive logic. The device is fully specified for partial-power-down applications using I_{off}. The I_{off} circuitry disables the outputs, preventing damaging current backflow through the device when it is powered down.

The RS4G08 is available in Green SOIC-14(SOP14) and TSSOP-14 packages. It operates over an ambient temperature range of -40°C to +125°C.
