#### A. SCOPE

This specification applies Ultrasonic Sensor SMD-1035-0640

#### **B.** Features

High S.P.L. and high sensitivity; Compact size; Very thin; Open type structure; Automatic soldering.

#### C. Applications

Object detection; Measuring the distance; I Dynamic body detection

#### D. Overview

SYD-1035T/SYD-1035S are ultrasonic transducer for various detections. SYD-1035R is used to transmit ultrasonic waves. SYD-1035R is used to receive them. SYD-1035R/SYD-1035S consist of piezoelectric ceramics, metal plate, resonator and resin case. Resonator has like a funnel shape to transmit ultrasonic waves which is generated by vibration of resonator to the air efficiently(or to concentrate ultrasonic waves from the air on the center of resonance). Sound pressure level(S.P.L.) is the most important characteristic for ultrasonic transducers. For example, in measuring distance application, high S.P.L. transducer enables to detect the further distance.

SYD-1035R/SYD-1035S cannot be used in outdoor applications because they are open type structure. And they cannot be used for automotive applications. We can support only for consumer applications.
