# 50 Ω nominal input / conjugate matched balun to QFN-2L STM32WL in high power mode, 862-928 MHz with integrated harmonic filter

**Chip scale package on glass
8 bumps - 1.83 x 2.13 mm²**

Features

- QFN STM32WL sub-GHz wireless microcontrollers impedance matched balun and Tx harmonics filter
- Optimized for QFN STM32WL sub-GHz wireless microcontrollers in high power mode and dedicated to 2-layer PCB
- 50 Ω nominal input / conjugate matched balun to QFN STM32WL
- 50 Ω nominal impedance on antenna side Tx and Rx
- Deep Tx rejection harmonic filter
- Low insertion loss
- Small footprint
- Low profile ≤ 630 μm after reflow
- High RF performance
- RF BOM and area reduction
- ECOPACK2 compliant component

Applications

- STM32WL sub-GHz wireless microcontrollers
- LPWAN-compliant radio solution, enabling the following modulations: LoRa®, (G)FSK, (G)MSK, and BPSK

Description

STMicroelectronics BALFHB-WL-03D3 is an ultra-miniature balun. This device integrates a matching network, balun, and harmonics filter. Matching impedance has been customized for the STM32WL sub-GHz wireless microcontrollers.

It is using STMicroelectronics IPD technology on a nonconductive glass substrate, which optimizes RF performances.

3.3 Solder paste

1. Halide-free flux qualification ROL0 according to ANSI/J-STD-004.
2. "No clean" solder paste is recommended.
3. Offers a high tack force to resist component movement during high speed.
4. Use solder paste with fine particles: powder particle size 20-38 µm.

3.4 Placement

1. Manual positioning is not recommended.
2. It is recommended to use the lead recognition capabilities of the placement system, not the outline centering
3. Standard tolerance of ±0.05 mm is recommended.
4. 1.0 N placement force is recommended. Too much placement force can lead to squeezed out solder paste and cause solder joints to short. Too low placement force can lead to insufficient contact between package and solder paste that could cause open solder joints or badly centered packages.
5. To improve the package placement accuracy, a bottom side optical control should be performed with a high resolution tool.
6. For assembly, a perfect supporting of the PCB (all the more on flexible PCB) is recommended during solder paste printing, pick and place and reflow soldering by using optimized tools.

3.5 PCB design preference

1. To control the solder paste amount, the closed via is recommended instead of open vias.
2. The position of tracks and open vias in the solder area should be well balanced. A symmetrical layout is recommended, to avoid any tilt phenomena caused by asymmetrical solder paste due to solder flow away.

3.6 Reflow profile

Figure 16. **ST ECOPACK® recommended soldering reflow profile for PCB mounting**
Note: *Minimize air convection currents in the reflow oven to avoid component movement.*
