Recommended Method of Storage

The following are general recommendations for moisture sensitive level (MSL) 4 storage and use:

1. Shelf life in sealed bag: 12 months at $< 40\text{ }^{\circ}\text{C}$ and $< 90\%$ relative humidity (RH)
2. After bag is opened, devices that will be subjected to reflow solder or other high temperature process must
 - a. Mounted within 72 hours of factory conditions $< 30^{\circ}\text{C}/60\%\text{RH}$, or
 - b. Stored at $<20\%$ RH
3. Devices require bake, before mounting, if Humidity Indicator Card is $> 20\%$ when read at $23 \pm 5\text{ }^{\circ}\text{C}$
4. If baking is required, devices may be baked:
 - a. 192 hours at 40°C , and $<5\%$ RH(dry air/nitrogen) or
 - b. 96 hours at 60°C , and $<5\%$ RH for all device containers
 - c. 24 hours at $125\text{ }^{\circ}\text{C}$
5. Soldering Condition
 - a. Pb-free solder temperature profile

- b. Reflow soldering should not be done more than two times.
- c. When soldering, do not put stress on the LEDs during heating.
- d. After soldering, do not warp the circuit board.

Heat Management

- Heat management of Photo Interrupter must be taken into consideration during the design stage of Photo Interrupter application. The current should be de-rated appropriately by referring to the de-rating curve found in each product specification.
- The temperature surrounding the Photo Interrupter in the application should be controlled.

ESD (Electrostatic Discharge)

- The products are sensitive to static electricity or surge voltage. ESD can damage a die and its reliability.
- When handling the products, the following measures against electrostatic discharge are strongly recommended:
 - Eliminating the charge
 - Grounded wrist strap, ESD footwear, clothes and floors
 - Grounded workstation equipment and tools
 - ESD table/shelf mat made of conductive materials
- Proper grounding is required for all devices, equipment, and machinery used in product assembly. Surge protection should be considered when designing of commercial products.
- If tools or equipment contain insulating materials such as glass or plastic, the following measures against electrostatic discharge are strongly recommended:
 - Dissipating static charge with conductive materials
 - Preventing charge generation with moisture
 - Neutralizing the charge with ionizers
