

## 36V, 200mA Low Dropout Voltage Linear Regulator

### General Description

The DS8363 series are a group of low-dropout ( LDO ) voltage regulators offering the benefits of wide input voltage range, low dropout voltage, low power consumption, and miniaturized packaging.

Quiescent current of only  $2.2\mu\text{A}$  makes these devices ideal for powering the battery-powered, always-on systems that require very little idle-state power dissipation to a longer service life. There is an option of shutdown mode by selecting the parts with the EN pin and pulling it low. The shutdown current in this mode goes down to only  $10\text{nA}$  ( typical ).

The DS8363 series of linear regulators are stable with the ceramic output capacitor over its wide input range from 2V to 36V and the entire range of output load current ( 0mA to 200mA ).

### Features

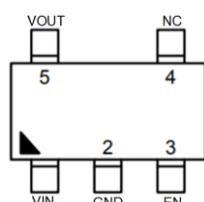

- $2.2\mu\text{A}$  Ground Current at no Load
- $\pm 2\%$  Output Accuracy
- 200mA Output Current
- 10nA Disable Current
- Wide Operating Input Voltage Range: 2V to 36V
- Dropout Voltage: 0.66V at 100mA /  $V_{\text{OUT}}$  5V
- Support Fixed Output Voltage 1.8V, 3.3V, 5V, 9V, 12V
- Stable with Ceramic or Tantalum Capacitor
- Current Limit Protection
- Over-Temperature Protection
- SOT-23-5 , DFN1x1-4L , DFN1.6x1.6-6L Package Available

### Applications

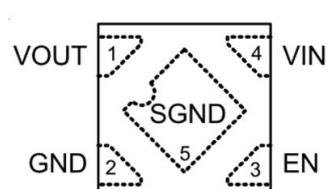

- Portable, Battery Powered Equipment
- Low Power Microcontrollers
- Laptop, Palmtops and PDAs
- Wireless Communication Equipment
- Audio/Video Equipment
- Car Navigation Systems
- Industrial Controls
- Weighting Scales
- Meters
- Home Automation

### Pin Configurations

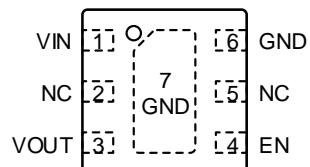

SOT-23-5

DFN-1x1-4L

DFN-1.6x1.6-6L

## Ordering Information

DS8363-AABB

Designator	Description	Symbol	Description
AA	Output Voltage	18	V <sub>OUT</sub> = 1.8V
		..	..
		..	..
		99	V <sub>OUT</sub> = 9.9V
		A1	V <sub>OUT</sub> = 12V
BB	Package type	S5	SOT-23-5
		D4	DFN-1x1-4L
		D6	DFN-1.6x1.6-6L

Special Request: Any Voltage between 1.8V and 12V under specific business agreement

## Description of Functional Pins

Pin No			Pin Name	Pin Function
SOT-23-5	DFN-1x1-4L	DFN-1.6x1.6-6L		
1	4	1	VIN	Input of Supply Voltage.
2	2	6	GND	Ground
3	3	4	EN	Enable Control Input.
4		2 , 5	NC	No Internal Connection.
5	1	3	VOUT	Output of the Regulator
	Exposed	Exposed	SGND	Substrate of Chip. Leave floating or tie to GND.

## Typical Application Circuits

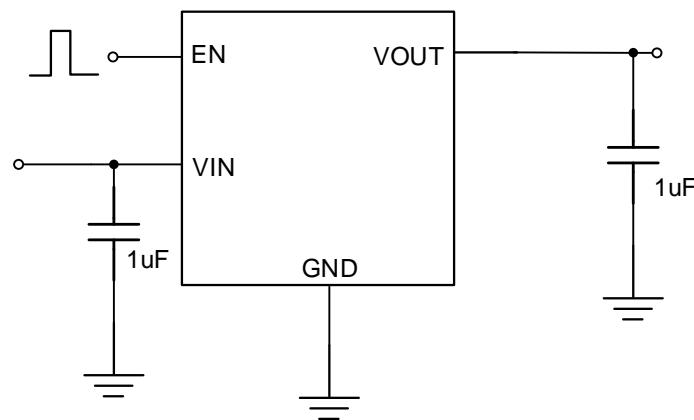

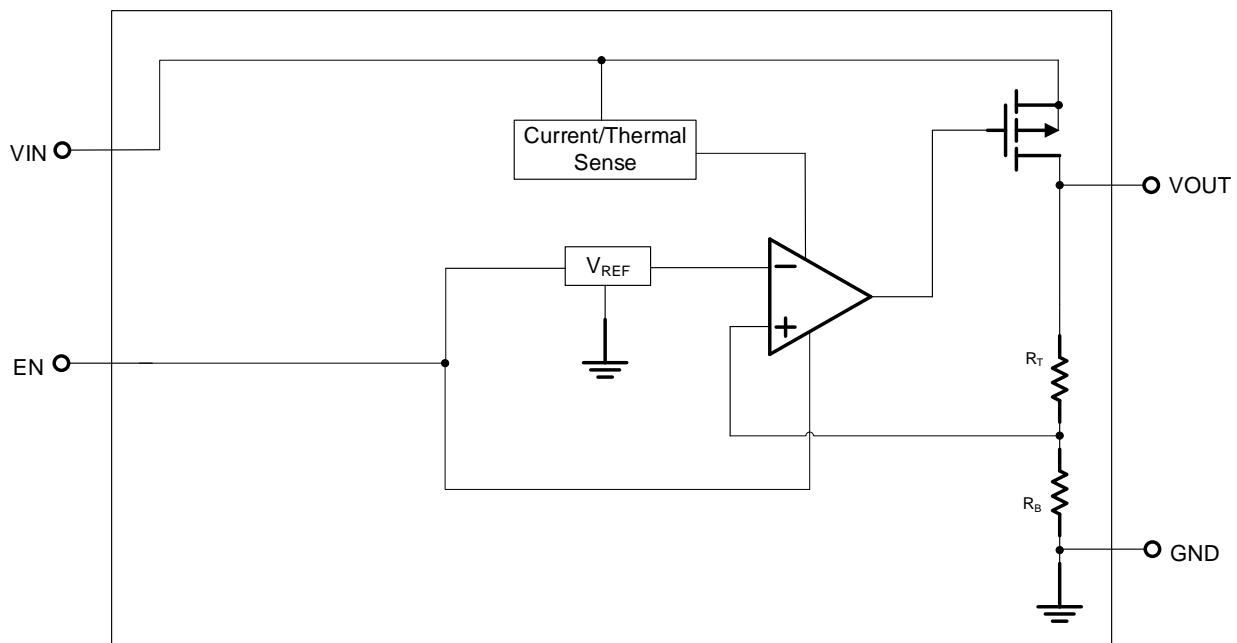

Figure 1: Application circuit of Fixed  $V_{OUT}$  LDO with enable function

## Function Block Diagram

**Absolute Maximum Ratings (Note 1)**

VIN, EN to GND -----	-0.3V to 40V
VOUT to GND -----	-0.3V to 14V
VOUT to VIN -----	-40V to 0.3V

**Package Thermal Resistance (Note 2)**

SOT-23-5, $\theta_{JA}$ -----	200 °C /W
DFN-1x1-4L, $\theta_{JA}$ -----	195 °C /W
DFN-1.6x1.6-6L, $\theta_{JA}$ -----	105 °C /W
Lead Temperature (Soldering, 10 sec.) -----	260 °C
Junction Temperature -----	150 °C
Storage Temperature Range -----	-60 °C to 150 °C
ESD Susceptibility	
HBM -----	2KV
MM -----	200V

**Recommended Operating Conditions**

Input Voltage VIN -----	2.0V to 36V
Junction Temperature Range -----	-40 °C to 125 °C
Ambient Temperature Range -----	-40 °C to 85 °C

## Electrical Characteristics

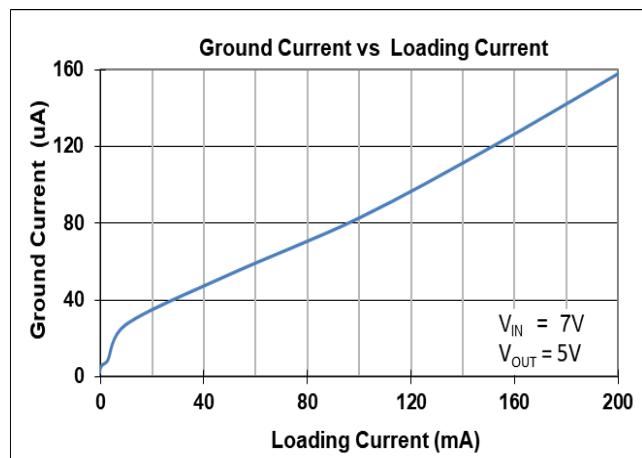

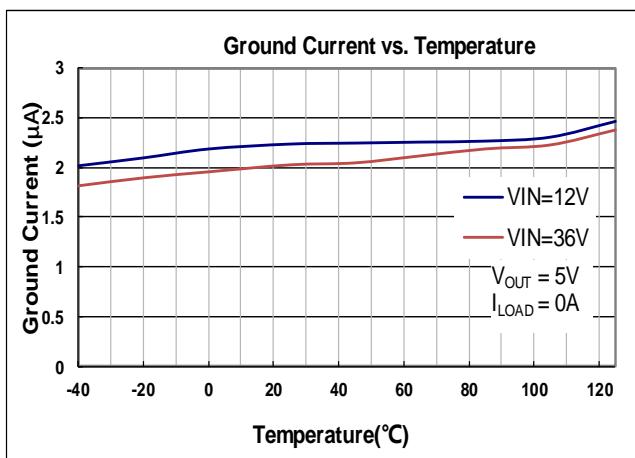

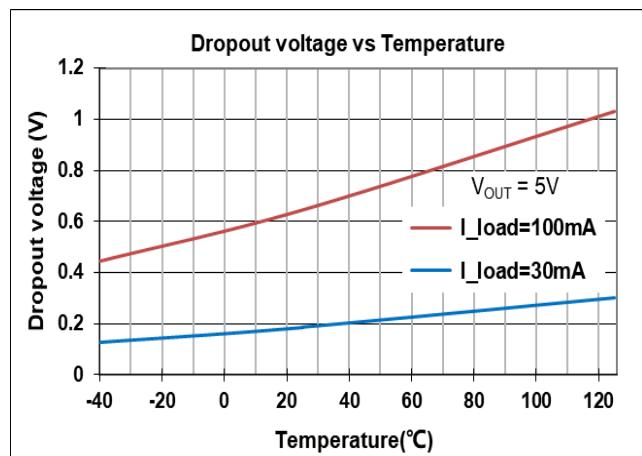

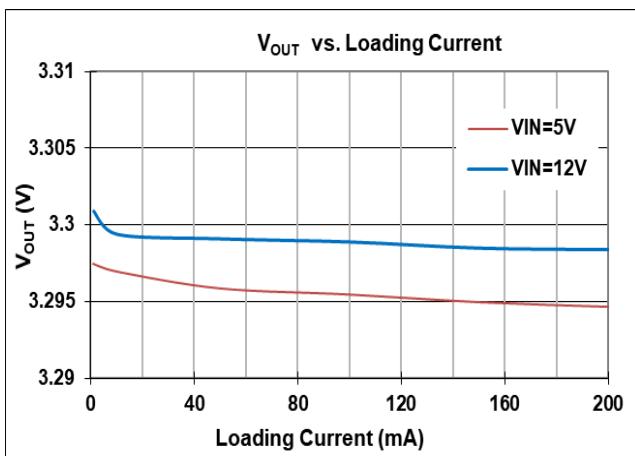

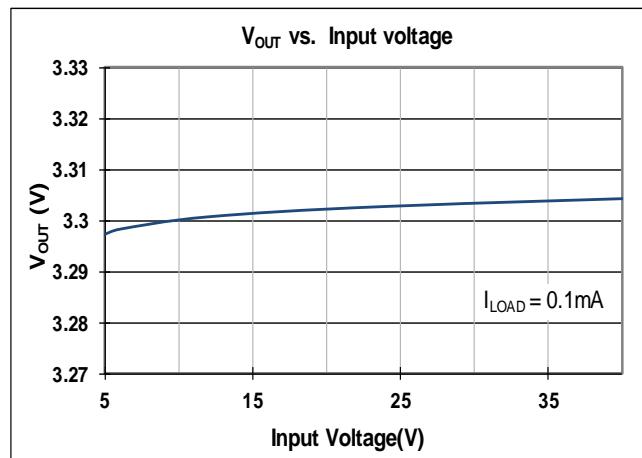

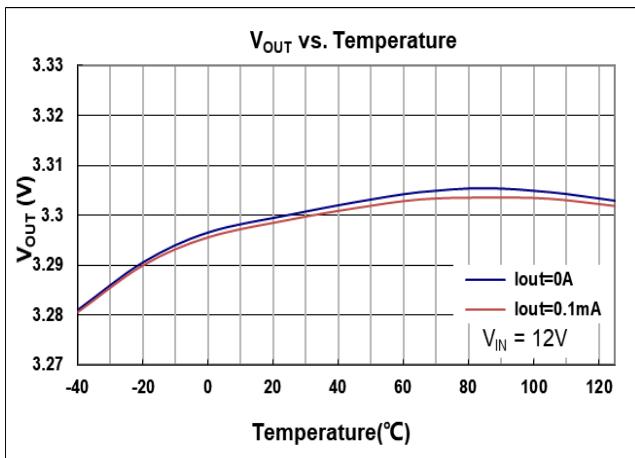

(  $V_{IN} = 15V$ ,  $V_{EN} = 5V$ ,  $T_A = 25^\circ C$  unless otherwise specified )

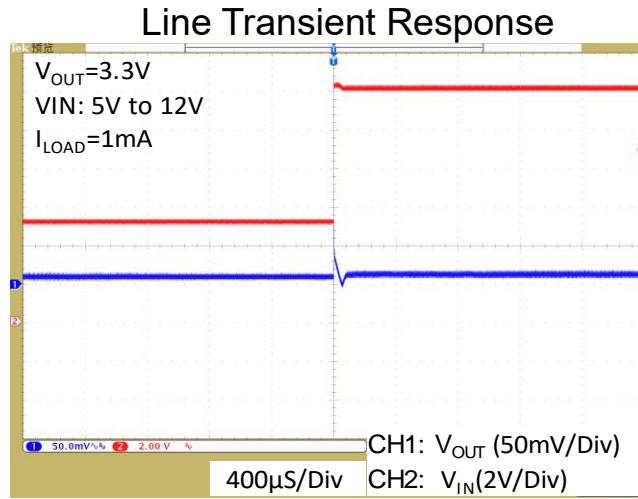

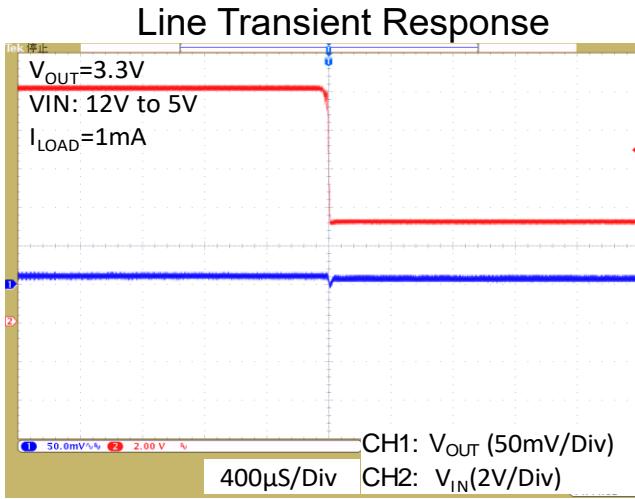

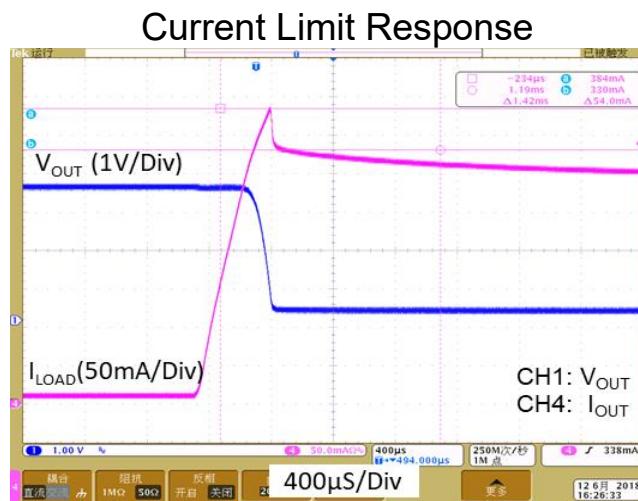

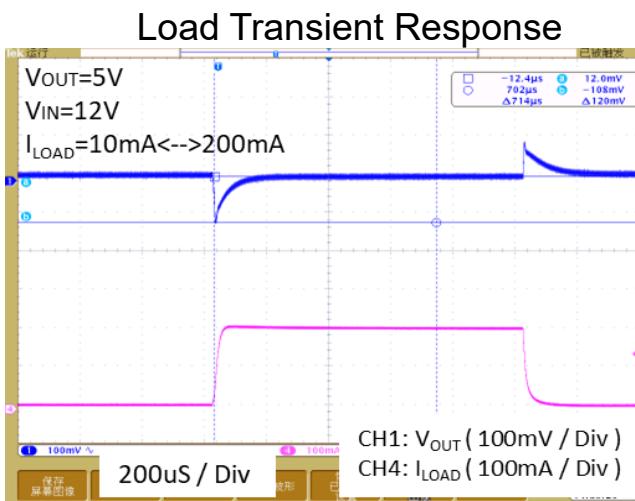

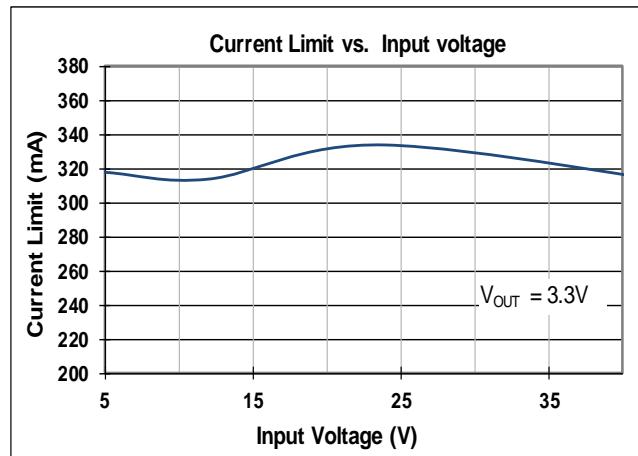

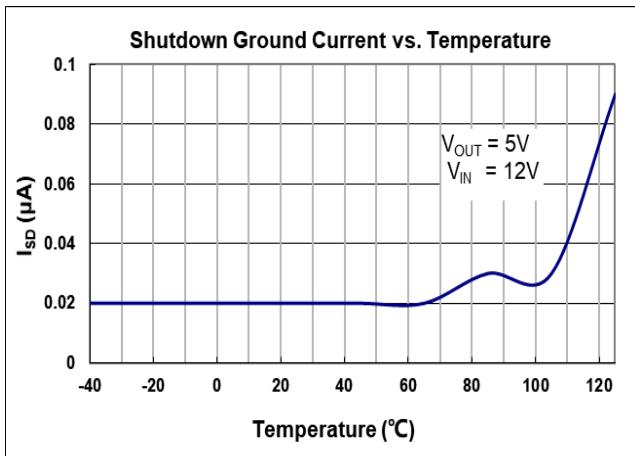

Parameter	Symbol	Test Conditions	Min	Typ	Max	Unit
Supply Voltage	$V_{IN}$		2	--	36	V
DC Output Voltage Accuracy		$I_{LOAD} = 0.1mA$	-2		2	%
Dropout Voltage ( $I_{LOAD} = 100mA$ )	$V_{DROP}$	$V_{OUT} \geq 5V$	--	0.66		V
	$V_{DROP\_3.3V}$	$V_{OUT} = 3.3V$		0.75		
	$V_{DROP\_1.8V}$	$V_{OUT} = 1.8V$		1		
Ground Current ( $I_{LOAD} = 0mA$ )	$I_Q$	$V_{OUT} \leq 5V$		2.2		$\mu A$
	$I_{QH}$	$5V < V_{OUT} \leq 12V$		4.2		
Shutdown Ground Current	$I_{SD}$	$V_{EN} = 0V$ , $V_{OUT} = 0V$		0.01	0.5	$\mu A$
Enable Threshold Voltage	$V_{IH}$	EN Rising	2			V
	$V_{IL}$	EN Falling			0.6	
EN Input Current	$I_{EN}$	$V_{EN} = 36V$		10	100	nA
Line Regulation	$\Delta_{LINE}$	$I_{LOAD} = 1mA$ , $5 \leq V_{IN} \leq 36V$	--	0.3		%
Load Regulation	$\Delta_{LOAD}$	$10mA \leq I_{LOAD} \leq 0.2A$		0.1		%
Output Current Limit	$I_{LIM}$	$V_{OUT} = 0$	201	300		mA
Power Supply Rejection Ratio	PSRR	$V_{OUT} = 5V$ , $I_{LOAD} = 1mA$ , $V_{IN} = 12V$ , $f = 100Hz$		70		dB
Thermal Shutdown Temperature	$T_{SD}$	$I_{LOAD} = 10mA$	--	160	--	$^\circ C$
Thermal Shutdown Hysteresis	$\Delta T_{SD}$			15		$^\circ C$

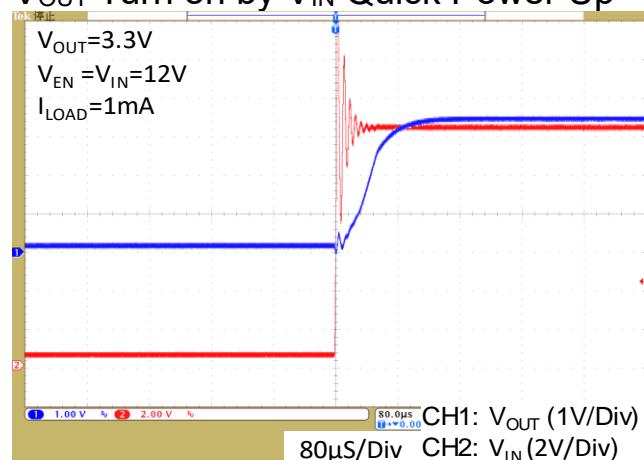

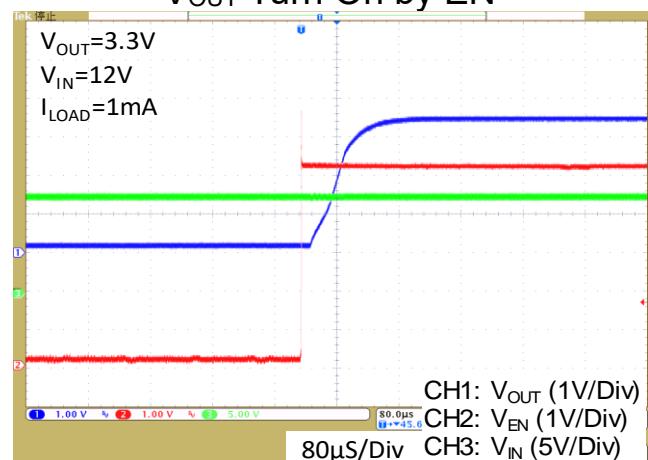

**Note 1.** Stresses beyond those listed "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions may affect device reliability.

**Note 2.**  $\theta_{JA}$  is measured at  $T_A = 25^\circ C$  on a DSTECH EVB board.

## Typical Characteristics

**V<sub>OUT</sub> Turn on by V<sub>IN</sub> Quick Power Up****V<sub>OUT</sub> Turn On by EN**

### ***Input and Output Capacitor Requirements***

The external input and output capacitors of DS8363 series must be properly selected for stability and performance. Use a 1 $\mu$ F or larger input capacitor and place it close to the IC's VIN and GND pins. Any output capacitor meeting the minimum 1m $\Omega$  ESR ( Equivalent Series Resistance ) and effective capacitance between 1 $\mu$ F and 22 $\mu$ F requirement may be used. Place the output capacitor close to the IC's VOUT and GND pins. Increasing capacitance and decreasing ESR can improve the circuit's PSRR and line transient response.

### ***Current Limit***

The DS8363 series contain the current limiter of output power transistor, which monitors and controls the transistor, limiting the output current to 300mA (typical). The output can be shorted to ground indefinitely without damaging the part.

### ***Dropout Voltage***

The DS8363 series use a PMOS pass transistor to achieve low dropout. When ( VIN – VOUT ) is less than the dropout voltage (  $V_{DROP}$  ), the PMOS pass device is in the linear region of operation and the input-to-output resistance is the  $R_{DS(ON)}$  of the PMOS pass element.  $V_{DROP}$  scales approximately with the output current because the PMOS device behaves as a resistor in dropout condition.

As any linear regulator, PSRR and transient response

are degraded as ( VIN – VOUT ) approaches dropout condition.

### ***OTP (Over Temperature Protection)***

The over temperature protection function of DS8363 series will turn off the P-MOSFET when the junction temperature exceeds 160°C (typ.). Once the junction temperature cools down by approximately 15°C, the regulator will automatically resume operation.

### ***Thermal Application***

For continuous operation, do not exceed the absolute maximum junction temperature. The maximum power dissipation depends on the thermal resistance of the IC package, PCB layout, rate of surrounding airflow, and difference between junction and ambient temperature. The maximum power dissipation can be calculated as below:

$$T_A=25^\circ\text{C}, \text{DS-Tech PCB},$$

The max PD ( Max ) = ( 125°C – 25°C ) / ( 200°C/W ) = 0.5W for SOT-23-5 packages.

The max PD ( Max ) = ( 125°C – 25°C ) / ( 195°C/W ) = 0.51W for DFN-1x1-4L package.

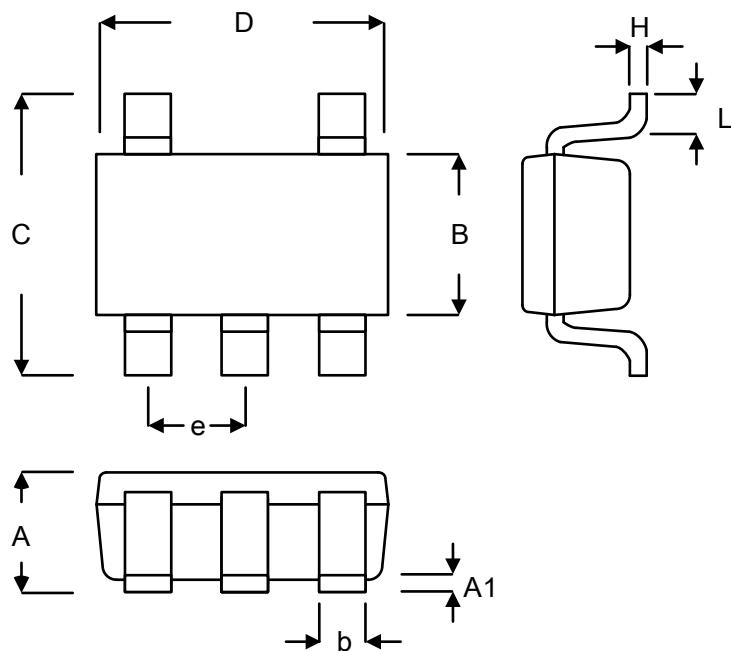

The max PD ( Max ) = ( 125°C – 25°C ) / ( 105°C/W ) = 0.95W for DFN-1.6x1.6-6L package.

Power dissipation (PD) is equal to the product of the output current and the voltage drop across the output pass element, as shown in the equation below:

$$PD = ( VIN – VOUT ) \times I_{OUT}$$

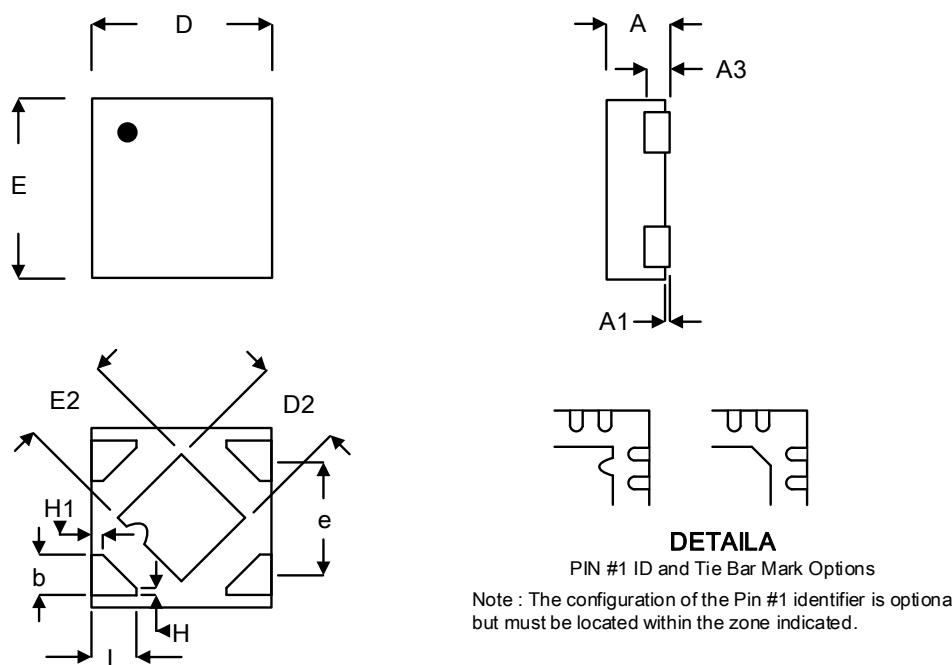

### ***Layout Consideration***

By placing input and output capacitors on the same side of the PCB as the LDO, and placing them as close as is practical to the package can achieve the best performance. The ground connections for input and output capacitors must be back to the DS8363 ground pin using as wide and as short of a copper trace as is practical. Connections using long trace lengths, narrow trace widths, and/or connections through via must be avoided. These add parasitic inductances and resistance that results in worse performance especially during transient conditions.
