GENERAL DESCRIPTION

The ADV7622 is a high performance, four-input, one-output, High-Definition Multimedia Interface (HDMI) transceiver that integrates HDMI receiver and transmitter functions with digital audio I/Os onto one chip. It supports all HDCP repeater functions through fully tested Analog Devices, Inc., repeater software libraries and drivers.

The ADV7622 supports all mandatory HDMI 3D TV formats in addition to all HDTV formats up to 1080p, 36-bit Deep Color. The ADV7622 also features an integrated HDMI CEC controller that supports capability, discovery, and control (CDC).

The ADV7622 offers a dedicated flexible audio output port and a dedicated audio input port to allow for easy extraction and insertion of audio data into and out of the HDMI stream. HDMI audio formats, including SACD via DSD and compressed high bit rate audio via HBR, are supported. The ADV7622 also features an audio return channel (ARC) receiver. ARC simplifies cabling by combining upstream audio capability in a conventional HDMI cable.

Fabricated in an advanced CMOS process, the ADV7622 is provided in a 144-lead, 20 mm × 20 mm, Pb-free LQFP and is specified over the 0°C to 70°C temperature range.

Stresses above those listed under Absolute Maximum Ratings may cause permanent damage to the device. This is a stress rating only; functional operation of the device at these or any other conditions above those indicated in the operational section of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

PACKAGE THERMAL PERFORMANCE

To reduce power consumption when using the ADV7622, turn off the unused sections of the part.

Due to printed circuit board (PCB) metal variation and, thus, variation in PCB heat conductivity, the value of θ_{JA} may differ for various PCBs.

The most efficient measurement solution is obtained using the package surface temperature to estimate the die temperature because this eliminates the variance associated with the θ_{JA} value.

The maximum junction temperature ($T_{J\ MAX}$) of 125°C must not be exceeded. The following equation calculates the junction temperature using the measured package surface temperature and applies only when no heat sink is used on the DUT:

$$T_J = T_S + (\Psi_{JT} \times W_{TOTAL})$$

where:
T_S = the package surface temperature (°C).
Ψ_{JT} = 0.6°C/W for a 144-ball LQFP.

$$W_{TOTAL} = ((CVDD \times I_{CVDD}) + (DVDD \times I_{DVDD}) + (PVDD \times I_{PVDD}) + (DVDDIO \times I_{DVDDIO}) + (0.7 \times TVDD \times I_{TVDD}) + (TXAVDD \times I_{TXAVDD}) + (TXPVDD \times I_{TXPVDD}) + (TXPLVDD \times I_{TXPLVDD}))$$

Note that for W_{TOTAL}, 5% of TVDD power is dissipated on the part itself.

ESD CAUTION

ESD (electrostatic discharge) sensitive device. Charged devices and circuit boards can discharge without detection. Although this product features patented or proprietary protection circuitry, damage may occur on devices subjected to high energy ESD. Therefore, proper ESD precautions should be taken to avoid performance degradation or loss of functionality.

FUNCTIONAL OVERVIEW

HDMI RECEIVER

The ADV7622 front end incorporates a 4:1 multiplexed HDMI receiver boasting support for HDMI features including 3D TV, content type bits, and advanced features, such as capability discovery and control. Building on the feature set of existing Analog Devices HDMI devices, the ADV7622 also offers support for all HDTV formats up to 36-bit, 1080p Deep Color and all display resolutions up to UXGA (1600 × 1200 at 60 Hz).

With the inclusion of HDCP 1.4, displays can receive encrypted video content. The HDMI interface of the ADV7622 allows for authentication of a video receiver, decryption of encoded data at the receiver, and renewability of that authentication during transmission as specified by the HDCP 1.4 protocol. Repeater support is also offered by the ADV7622.

The HDMI receiver offers advanced audio functionality. It supports multichannel I²S audio for up to eight channels. It also supports a 6-DSD channel interface with each channel carrying an over-sampled 1-bit representation of the audio signal as delivered on SACD. The ADV7622 can also receive HBR audio packet streams and output them through the HBR interface in an S/PDIF format conforming to the IEC 60958 standard. S/PDIF is supported via the HPD back channel. The receiver also contains an audio mute controller, which can detect a variety of conditions that may result in audible extraneous noise in the audio output. On detection of these conditions, the audio data can be ramped to prevent audio clicks or pops.

The ADV7622 HDMI receiver incorporates active, programmable equalization of the HDMI data signals that compensates for the high frequency losses inherent in HDMI and DVI cabling, especially at longer lengths and higher frequencies. The receiver also contains a programmable data island packet interrupt generator.

HDMI TRANSMITTER

The ADV7622 features a single HDMI transmitter supporting ARC, 3D TV formats as well as all HDTV formats up to 1080p, 36-bit Deep Color.

Supporting both single-ended and differential modes, the ARC feature simplifies cabling by combining an upstream audio capability in a conventional HDMI cable.

The transmitter features an on-chip MPU with an I²C master to perform HDCP operations and EDID reading operations.

I²C INTERFACE

The ADV7622 supports a 2-wire serial (I²C-compatible) microprocessor bus driving multiple peripherals. The ADV7622 is controlled by an external I²C master device, such as a microcontroller.
