### **LITE-ON DCC**

### RELEASE

BNS-OD-FC001/A4

LITE-ON Technology Corp. / Optoelectronics No.90,Chien 1 Road, Chung Ho, New Taipei City 23585, Taiwan, R.O.C. Tel: 886-2-2222-6181 Fax: 886-2-2221-1948 / 886-2-2221-0660 http://www.liteon.com/opto

### Photocouplers LTV-331J series

# LTV-331J series

2.5 Amp Output Current IGBT Gate Driver Optocoupler with Integrated ( $V_{CE}$ ) Desaturation Detection, UVLO Fault Status Feedback and Active Miller Clamping

### 1. DESCRIPTION

The LTV-331J is an advanced 2.5 A output current, easy-to-use, intelligent gate driver which makes IGBT  $V_{CE}$  fault protection compact, affordable, and easy-to implement. Features such as integrated  $V_{CE}$  detection, under voltage lockout (UVLO), "soft" IGBT trun-off, isolated open collector fault feedback and active Miller clamping provide maximum design flexibility and circuit protection.

The LTV-331J contains an AlGaAs LED. The LED is optically coupled to an integrated circuit with a power output stage. LTV-331J is ideally suited for driving power IGBTs and MOSFET used in motor control inverter applications. The voltage and current supplied by these optocouplers make them ideally suited for directly driving IGBTs with ratings up to 1200 V and 150 A. For IGBTs with higher ratings, the LTV-331J can be used to drive a discrete power stage which drives the IGBTs gate. The LTV-331J has an insulation voltage of  $V_{IORM}$  = 1414  $V_{PEAK}$ .

The Optocoupler operational parameters are guaranteed over the temperature range from -40°C ~ +105°C.

#### **1.1 Features**

- Under Voltage Lock-Out Protection (UVLO) with Hysteresis
- Desaturation Detection
- Miller Clamping
- Open Collector Isolated fault feedback
- "Soft" IGBT Turn-off
- Fault Reset by next LED turn-on (low to high) after fault mute period

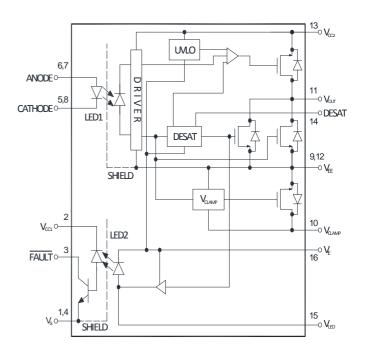

#### **1.2 Specifications**

- 2.5 A maximum peak output current
- 250 ns maximum propagation delay
- 100 ns maximum pulse width distortion (PWD)
- 50 kV/us minimum Common Mode Rejection (CMR) at V<sub>CM</sub> = 1500 V
- I<sub>CC</sub> = 4.5 mA maximum supply current
- Wide V<sub>CC</sub> operating range: 15 to 30 Volts (V<sub>CC</sub>)
- Guaranteed performance over temperature -40°C ~ +105°C.
- MSL Level 1
- Safety approval:
- UL/ cUL Recognized 5000 V<sub>RMS</sub>/1 min (To be continued)
- IEC/EN/DIN EN 60747-5-5 V<sub>IORM</sub> = 1414 Vpeak(To be continued)

#### **1.2 Applications**

- Isolated IGBT/MOSFET gate drive
- Industrial inverters and Uninterruptible power supply (UPS)
- AC and Brushless DC motor drives

#### **1.3 Functional Diagram**

### 1.4 Pin description

1	V <sub>s</sub> V <sub>E</sub>	16
2	V <sub>CC1</sub> V <sub>LED</sub>	15
3	FAULT DESAT	14
4	Vs V <sub>cc2</sub>	13
5	CATHODE V <sub>EE</sub>	12
6	ANODE Vout	11
7	ANODE V <sub>CLAMP</sub>	10
8	CATHODE V <sub>EE</sub>	9
	1	

Pin	Symbol	Description
1	Vs	Input Ground
2	V <sub>CC1</sub>	Positive input supply voltage (3.3 V to 5.5 V)
3	FAULT	Fault output. FAULT changes from a high impedance state to a logic low output within 5 µs of the voltage on the DESAT pin exceeding an internal reference voltage of 7 V. FAULT output is an open collector which allows the FAULT outputs from all LTV-333J in a circuit to be connected together in a "wired OR" forming a single fault bus for interfacing directly to the micro-controller.
4	Vs	Input Ground
5	CATHODE	Cathode
6	ANODE	Anode
7	ANODE	Anode
8	CATHODE	Cathode
9	V <sub>EE</sub>	Output supply voltage
10	V <sub>CLAMP</sub>	Miller clamp
11	V <sub>OUT</sub>	Gate drive voltage output
12	V <sub>EE</sub>	Output supply voltage
13	V <sub>CC2</sub>	Positive output supply voltage
14	DESAT	Desaturation voltage input. When the voltage on DESAT exceeds an internal reference voltage of 6.5 V while the IGBT is on, FAULT output is changed from a high impedance state to a logic low state within 5 µs.
15	V <sub>LED</sub>	LED anode. This pin must be left unconnected for guaranteed data sheet performance. (For optical coupling testing only)
16	VE	Common (IGBT emitter) output supply voltage

#### 1.5 True table

lF	UVLO(Vcc-V <sub>E</sub> )	Vcc-VE) DESAT Function		Vout
ON	Active	Not Active	High	Low
ON	Not Active	Active(with DESAT fault)	Low(Fault)	Low
ON	Not Active	Active(no DESAT fault)	High(or no fault)	High
OFF	Active	Not Active	High	Low
OFF	Not Active	Not Active	High	Low

### Photocouplers LTV-331J series

#### **1.6 Ordering Information**

LTV-331J is UL Recognized with 5000 Vrms for 1 minute per UL1577.

Part number	Package	Option	Tape &	IEC/EN/DIN/EN 60747-5-5	Quantity	Others
		Name	Reel	(V <sub>PR</sub> method b)	Quantity	Others
		-			45 per tube	
	V-331J SOP-16	-V		•	45 per tube	
LTV-331J		-TP1	•			Location at
		TP1-V	●	•	850 per reel	upper right of tape

To order, choose a part number from the part number column and combine with the desired option from the option column to form an

order entry.

Example 1:

LTV331J-V to order product of SOP-16 Surface Mount package in Tube packaging(Quantity: 45pcs per tube) with IEC/EN/DIN EN

60747-5-5 Safety Approval (V<sub>PR</sub> method b).

Example 2:

LTV331JTP1-V to order product of SOP-16 Surface Mount package in tape& reel packaging with IEC/EN/DIN EN

60747-5-5 Safety Approval (V<sub>PR</sub> method b).

Above option datasheets are available. Please contact your LITEON sales representative or authorized distributor for information.

Example 3:

LTV-331J-TP1 to order product of SOP-16 Surface Mount package in tape& reel packaging with IEC/EN/DIN EN

60747-5-5 Safety Approval (Without  $V_{PR}$  method b).

Above option datasheets are available. Please contact your LITEON sales representative or authorized distributor for information.

	CMH	50		kV/µs	$T_{A} = 25^{\circ}C, I_{F} = 10 \text{ mA},$ $V_{CM} = 1500 \text{ V}, V_{CC2} = 30 \text{ V},$ $R_{F} = 2.1 \text{ k}\Omega, C_{F} = 1 \text{ nF}$		20,23
Common mode transient immunity at low level output	CML	15		kV/µs	$\begin{split} T_{A} &= 25^{\circ}C, \ V_{F} = 0 \ V, \\ V_{CM} &= 1500 \ V, \ V_{CC2} = 30 \ V, \\ R_{F} &= 2.1 \ k\Omega, \ C_{F} = 15 \ pF \end{split}$	21	21
		50		kV/µs	$T_{A} = 25^{\circ}C, V_{F} = 0 V,$ $V_{CM} = 1500 V, V_{CC2} = 30 V,$ $R_{F} = 2.1 \text{ k}\Omega, C_{F} = 1 \text{ nF}$		21

1. All Typical values at TA =  $25^{\circ}$ C and VCC – VEE = 30 V, VE – VEE = 0V; unless otherwise specified; all minimum and maximum specifications are at recommended operating condition.

2. Maximum pulse width = 10  $\mu s.$ 

This value is intended to allow for component tolerances for designs with  $I_0$  peak minimum = 1.0 A.

3. This supply is optional. Required only when negative gate drive is implemented.

4. Maximum pulse width = 50  $\mu$ s.

5. See the Slow IGBT Gate Discharge During Fault Condition section in the applications notes at the end of this data sheet for further details.

6. 15 V is the recommended minimum operating positive supply voltage ( $V_{CC2} - V_E$ ) to ensure adequate margin in excess of the maximum  $V_{UVLO+}$  threshold of 12.5V. For High Level Output Voltage testing, VOH is measured with a dc load current. When driving capacitive loads,  $V_{OH}$  will approach  $V_{CC}$  as  $I_{OH}$  approaches zero units.

7. Maximum pulse width = 1.0 ms.

8. Once V<sub>O</sub> of the LTV-331J is allowed to go high (V<sub>CC2</sub> - V<sub>E</sub> > V<sub>UVLO+</sub>), the DESAT detection feature of the LTV-331J will be the primary source of IGBT protection. UVLO is needed to ensure DESAT is functional. Once V<sub>CC2</sub> is increased from 0 V to above

### Photocouplers LTV-331J series

 $V_{UVLO+}$ , DESAT will remain functional until  $V_{CC2}$  is decreased below  $V_{UVLO-}$ . Thus, the DESAT detection and UVLO features of the LTV-331J work in conjunction to ensure constant IGBT protection.

9. See the DESAT fault detection blanking time section in the applications notes at the end of this data sheet for further details.

10. This is the "increasing" (i.e. turn-on or "positive going" direction) of  $V_{CC2}$  -  $V_E$ 

11. This is the "decreasing" (i.e. turn-off or "negative going" direction) of  $V_{CC2}$  -  $V_E$ 

12. This load condition approximates the gate load of a 1200 V/150A IGBT.

13. Pulse Width Distortion (PWD) is defined as |t<sub>PHL</sub> - t<sub>PLH</sub>| for any given unit.

14. As measured from  $I_{\text{F}}$  to  $V_{\text{O}}.$ 

15. The difference between t<sub>PHL</sub> and t<sub>PLH</sub> between any two LTV-331J parts under the same test conditions.

16. As measured from ANODE, CATHODE of LED to VOUT

17. This is the amount of time from when the DESAT threshold is exceeded, until the FAULT output goes low.

18. This is the amount of time the DESAT threshold must be exceeded before  $V_{OUT}$  begins to go low, and the FAULT output to go low. This is supply voltage dependent.

19. Auto Reset: This is the amount of time when  $V_{OUT}$  will be asserted low after DESAT threshold is exceeded. See the Description of Operation (Auto Reset) topic in the application information section.

20. Common mode transient immunity in the high state is the maximum tolerable  $dV_{CM}/dt$  of the common mode pulse,  $V_{CM}$ , to

assure that the output will remain in the high state (i.e.,  $V_0 > 15$  V or FAULT > 2 V).

21. Common mode transient immunity in the low state is the maximum tolerable  $dV_{CM}/dt$  of the common mode pulse,  $V_{CM}$ , to assure that the output will remain in a low state (i.e.,  $V_0 < 1.0$  V or FAULT < 0.8 V).

22. To clamp the output voltage at  $V_{CC}$  - 3  $V_{BE}$ , a pull-down resistor between the output and  $V_{EE}$  is recommended to sink a static current of 650 µA while the output is high. See the Output Pull-Down Resistor section in the application notes at the end of this data sheet if an output pull-down resistor is not used.

23. Split resistors network with a ratio of 1:1 is needed at input LED1. See Figure 13. together.

### Photocouplers LTV-331J series

	Symbol	Min.	Тур.	Max.	Unit	Test Condition	Note
Withstand Insulation Test	M	5000			V	RH ≤ 40-60%,	1, 2

Input-Output Capacitance	C <sub>I-O</sub>	_	1.3		pF	f = 1MHz, T <sub>A</sub> = 25°C	1

#### 6.5 PACKAGE CHARACTERISTICS

Note.1. According to UL1577, each Photocoupler is tested by applying an insulation test voltage  $6000V_{RMS}$  for 1 second (leakage current less than 10uA). This test is performed before the 100% production test for partial discharge

Note.2. This is a two-terminal measurement: pins 1-8 are shorted together and pins 9-16 are shorted together.

### Photocouplers LTV-331J series

### 8. TEMPERATURE PROFILE OF SOLDERING

#### 8.1 IR Reflow soldering (JEDEC-STD-020C compliant)

One time soldering reflow is recommended within the condition of temperature and time profile shown below. Do not solder more than three times.

Profile item	Conditions				
Preheat					
- Temperature Min (T <sub>Smin</sub> )	150°C				
- Temperature Max (T <sub>Smax</sub> )	200°C				
- Time (min to max) (ts)	90±30 sec				
Soldering zone					
- Temperature ( $T_L$ )	217°C				
- Time (t <sub>L</sub> )	60 ~ 100 sec				
Peak Temperature (T <sub>P</sub> )	260°C				
Ramp-up rate	3°C / sec max.				
Ramp-down rate	3~6°C / sec

## Photocouplers LTV-331J series

#### 8.2 Wave soldering (JEDEC22A111 compliant)

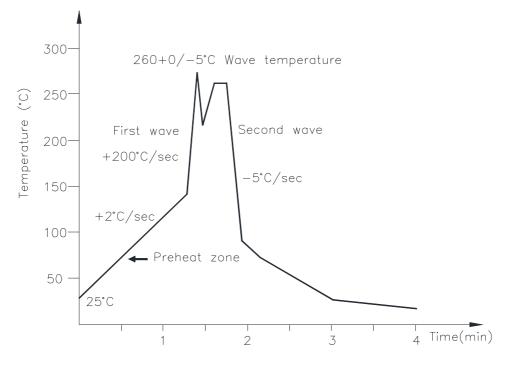

One time soldering is recommended within the condition of temperature.

Temperature: 260+0/-5°C

Time: 10 sec.

Preheat temperature:25 to 140°C

Preheat time: 30 to 80 sec.

#### 8.3 Hand soldering by soldering iron

Allow single lead soldering in every single process. One time soldering is recommended.

Temperature: 380+0/-5°C

Time: 3 sec max.

#### 9. Notes:

Specifications of the products displayed herein are subject to change without notice.

The products shown in this publication are designed for the general use in electronic applications such as office automation equipment, communications devices, audio/visual equipment, electrical instrumentation and application. For equipment/devices where high reliability or safety is required, such as space applications, nuclear power control equipment, medical equipment, etc, please contact our sales representatives.
