100V, 1.25A Peak, High Frequency Half-Bridge Drivers

FN6614  
Rev 3.00  
December 4, 2015

The [ISL89400](#), [ISL89401](#) are 100V, high frequency, half-bridge N-Channel power MOSFET driver ICs. They are based on the popular HIP2100, HIP2101 half-bridge drivers, but offer several performance improvements. The ISL89400 has additional input hysteresis for superior operation in noisy environments and the inputs of the ISL89401 (like those of the ISL89400) can now safely swing to the V<sub>DD</sub> supply rail. Finally, both parts are available in a very compact 9 Ld DFN package and an 8 Ld SOIC to minimize the required PCB footprint.

**Applications**

- Telecom half-bridge converters
- Telecom full-bridge converters
- Two-switch forward converters
- Active-clamp forward converters
- Class-D audio amplifiers
