4.5-24V V_{DD} Hall Effect Sensor

1. Description

The ES3144EUA is small, versatile digital Hall-effect devices that are operated by the magnetic field from a permanent magnet or an electromagnet.

These unipolar sensors are designed to meet the requirements of a wide range of potential applications. These economical unipolar sensors are well suited for simple, high-volume, cost-sensitive position and motion sensing applications.

The 4.5Vdc to 24Vdc supply voltage range allows this device to be used in very wide voltage applications.

2. Features

- Wide operating voltage range: 4.5V to 24V
- Built-in reverse voltage protecting capability
- RoHS-compliant material meets directive 2011/65/EU
- Robust design: will operate up to 85°C
- Package: T0-92S package
- Unipolar respond to a single pole: North (AT) or South (A,BT and ET),making these products well-suited for shift selectors, wiper end/home position, door ajar/open, and vane-interrupt systems etc.

3. Applications

- Speed and RPM sensing
- Door or lid closure detection
- Flow-rate sensing
- Printer head position sensing
- Robotics control
- Medication bin monitor on portable drug carts

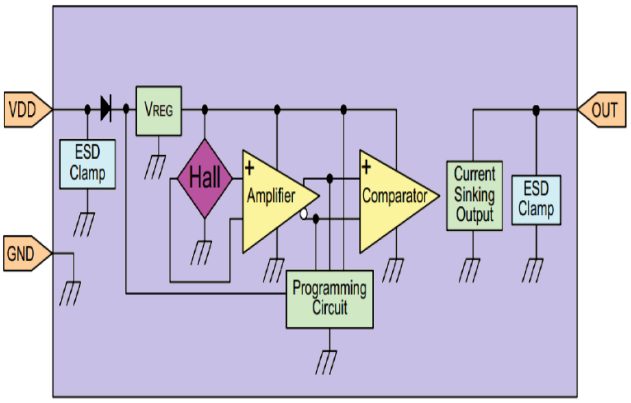
7. Typical Application



8. Function Description

The ES3144EUA exhibits unipolar magnetic switching characteristics. Therefore, it requires south or north poles to operate properly.

The device behaves as a unipolar with asymmetric operating and release switching points. This means While the magnetic flux density(B) is larger than operate point (Bop), the output will be turned on (Low), while the magnetic flux density(B) is lower than release point (Brp), then turn off (High).
