

Capless 3V_{rms} Line Driver with Adjustable Gain

FEATURES

- Capless Structure
- Eliminates Pop/Clicks
- Eliminates Output DC-Blocking Capacitors
- Provides Flat Frequency Response from DC to 20kHz
- Low Noise and THD
- Typical SNR=90dB
- Typical THD+N=0.01%(f=1kHz)
- 3Vrms Output Voltage into 2.5kΩ Load with 5V Supply Voltage
- Differential Input

APPLICATIONS

- Set-Top Box
- LCD TV
- Blue-Ray DVD-Players
- Home Theater in a Box

GENERAL DESCRIPTION

The TMI8320A is a 3Vrms pop/click-free stereo line driver designed to allow the removal of the output DC-blocking capacitors for reduced component count and cost. The device is ideal for single supply electronics when size and cost are critical design parameters.

The TMI8320A is capable of driving 3Vrms into a 2.5kΩ load with 5V supply voltage. The device has differential inputs and uses external gain setting resistors that supports a gain range of ±1V/V to ±10V/V. The TMI8320A has built-in shutdown control for pop/click-free on/off control.

Using the TMI8320A in audio products can reduce component count compared to traditional methods of generating a 3Vrms output. The TMI8320A doesn't require a power supply greater than 5V to generate an 8.5V_{pp} output, nor does the device require a split rail power supply. The TMI8320A integrates a charge pump to generate a negative supply rail that provides a clean, pop/click-free ground-biased 3Vrms output.

The TMI8320A is available in Green TSSOP14 package. It operates over an ambient temperature range of -40°C to 85°C.

TYPICAL APPILCATION

Figure 1. TMI8320A Application Circuit

ABSOLUTE MAXIMUM RATINGS (Note 1)

Parameter	Value	Unit
Supply Voltage	-0.3~6	V
Input Voltage	Vss-0.3 to Vdd+0.3	V
Minimum Load Impedance (R _L)	600	Ω
EN to GND	-0.3 to Vdd+0.3	V
Junction Temperature (Note2)	150	°C
Storage Temperature Range	-65~150	°C
Lead Temperature (Soldering,10s)	260	°C

PIN CONFIGURATION

Top Mark: T8320A/YYXXX (T8320A: Device Code, YYXXX: Inside code)

Part Number	Package	Top mark	Quantity/ Reel
TMI8320A	TSSOP14	T8320A/YYXXX	4000

TMI8320A devices are Pb-free and RoHS compliant.

PIN FUNCTIONS

Pin No.	Name	Function
1	+INR	Right Channel OPAMP Positive input (connected to GND)
2	-INR	Right Channel OPAMP Negative input
3	OUTR	Right Channel OPAMP Output
4	SGND	Signal Ground
5	EN	Enable Input. Active high
6	PVSS	Negative Supply Voltage Output
7	CN	Charge Pump Flying Capacitor Negative Terminal
8	CP	Charge Pump Flying Capacitor Positive Terminal
9	PVDD	Positive Supply
10	PGND	Power Ground
11	UVP	Under voltage Protection Input
12	OUTL	Left Channel OPAMP Output
13	-INL	Left Channel OPAMP Negative Input
14	+INL	Left Channel OPAMP Positive input (connected to GND)

ESD RATINGS

Items	Description	Value	Unit
V_{ESD}	Human Body Model for all pins	3000	V

JEDEC specification JS-001

RECOMMENDED OPERATING CONDITIONS

Items	Description	Min	Max	Unit
Voltage Range	IN	3	5.5	V
T_J	Operating Junction Temperature Range	-40	125	°C

ELECTRICAL CHARACTERISTICS

($V_{DD} = 5V$, $T_A = 25^{\circ}C$, unless otherwise noted.)

Symbol	Parameter	Conditions	Min	Typ	Max	Unit
V_{OS}	Output Offset Voltage	$V_{DD}=3V$ to $5V$		1.5	5	mV
PSRR	Power Supply Rejection Ratio	$V_{DD}=3V$ to $5V$		90		dB
V_{CH}	High-Level Output Voltage	$V_{DD}=3.3V$, $R_L=2.5k\Omega$	3.18			V
V_{OL}	Low-Level Output Voltage	$V_{DD}=3.3V$, $R_L=2.5k\Omega$			-3.1	V
I_{IH}	High-Level Input Current (EN)	$V_{DD}=5V$, $V_I=V_{DD}$			1	μA
I_{IH}	Low-Level Input Current (EN)	$V_{DD}=5V$, $V_I=0V$			1	μA
I_{DD}	Supply Current	$V_{DD}=3.3V$, No load, $EN=V_{DD}$	8	11.3		mA
		$V_{DD}=5V$, No load, $EN=V_{DD}$		11.7	18	
		Shutdown mode, $V_{DD}=3V$ to $5V$		0.1	0.2	
V_O	Output Voltage (Outputs in Phase)	THD+N=1%, $V_{DD}=3.3V$, $f=1kHz$, $R_L=2.5k\Omega$		2.28		V_{rms}
		THD+N=1%, $V_{DD}=5V$, $f=1kHz$, $R_L=2.5k\Omega$		3.50		
		THD+N=1%, $V_{DD}=5V$, $f=1kHz$, $R_L=100k\Omega$		3.57		
THD+N	Total Harmonic Distortion Plus Noise	$V_O=2V_{rms}$, $f=1kHz$, $R_L=2.5k\Omega$		0.01		%
		$V_O=3V_{rms}$, $f=1kHz$, $R_L=2.5k\Omega$		0.01		%
X_{TALK}	Crosstalk	$V_O=2V_{rms}$, $f=1kHz$, $R_L=2.5k\Omega$		-90		dB
		$V_O=3V_{rms}$, $f=1kHz$, $R_L=2.5k\Omega$		-88		dB
I_O	Output Current Limit	$V_{DD} = 3.3V$		20		mA
R_{IN}	Input Resistor Range		1	10	47	$k\Omega$
R_{FB}	Feedback Resistor Range		4.7	20	100	$k\Omega$
SR	Slew Rate			8		V/ μs
C_{LOAD_Max}	Maximum Capacitive Load			220		pF
V_N	Noise Output Voltage	A-weighted, BW = 20kHz		30		μV_{rms}
SNR	Signal to Noise Ratio	$V_O=3V_{rms}$, THD+N=0.1%, BW=20kHz, A-Weighted		90		dB
G_{BW}	Unity Gain Bandwidth			5.4		MHz
A_{VO}	Open-Loop Voltage Gain			110		dB

ELECTRICAL CHARACTERISTICS (Continued)

Symbol	Parameter	Conditions	Min	Typ	Max	Unit
F _{CP}	Charge Pump Frequency		300	417	540	kHz
V _{UVP}	External Under Voltage Detection		1.05	1.15	1.25	V
I _{HYS}	External Under Voltage Detection Hysteresis Current			4.6		μA
V _{EN_H}	Input High Voltage Threshold	V _{DD} =5V		1.65		V
V _{EN_L}	Input Low Voltage Threshold	V _{DD} =5V		0.6		V

Note 1: Absolute Maximum Ratings are those values beyond which the life of a device may be impaired.

Note 2: T_J is calculated from the ambient temperature T_A and power dissipation P_D according to the following formula: T_J = T_A + (P_D) × θ_{JA}.

APPLICATION INFORMATION

Decoupling Capacitors

The TMI8320A is a capless line driver amplifier that requires adequate power supply decoupling to ensure that the noise and total harmonic distortion (THD) are low. A good low equivalent-series-resistance (ESR) ceramic capacitor, typically $1\mu\text{F}$, placed as close as possible to the device PVDD lead, works best. Placing this decoupling capacitor close to the TMI8320A is important for the performance of the amplifier. For filtering lower frequency noise signals, a $10\mu\text{F}$ or larger capacitor placed near the audio power amplifier would also help, but it is not required in most applications because of the high PSRR of this device.

Gain Setting Resistors Ranges

The gain setting resistors, R_{IN} and R_{FB} , must be chosen so that noise, stability and input capacitor size of the TMI8320A are kept within acceptable limits. Voltage gain is defined as R_{FB} divided by R_{IN} .

Selecting values that are too low demands a large input AC coupling capacitor, C_{IN} . Selecting values that are too high increases the noise of the amplifier. Table 1 lists the recommended resistor values for different gain settings.

Input Resistor Value, R_{IN}	Feedback Resistor Value, R_{FB}	Inverting Input Gain
22k Ω	22k Ω	1.0V/V
20k Ω	30k Ω	1.5V/V
33k Ω	68k Ω	2.1V/V
10k Ω	100k Ω	10.0V/V

Table 1. Recommended Resistor Values

Figure 3. R_{IN} , R_{FB} resistor

Input-Blocking Capacitors

DC input-blocking capacitors are required to be added in series with the audio signal into the input pins of the TMI8320A. These capacitors block the DC portion of the audio source and allow the TMI8320A inputs to be properly biased to provide maximum performance. The input blocking capacitors also limit the DC-gain to one, limiting the DC-offset voltage at the output.

These capacitors form a high-pass filter with the input resistor, R_{IN} . The cutoff frequency is calculated using Equation 1. For this calculation, the capacitance used is the input-blocking capacitor and the resistance is the input resistor chosen from Table 1, then the frequency and/or capacitance can be determined when one of the two values are given.

$$f_{CIN} = 1 / (2\pi \times R_{IN} \times C_{IN}) \text{ or } C_{IN} = 1 / (2\pi \times f_{CIN} \times R_{IN}) \quad (\text{Equation 1})$$

Pop-Free Power Up

Pop-free power up is ensured by keeping the $\overline{SD}$ ($\overline{EN}$) (shutdown pin) low during power supply ramp up and down. The $\overline{EN}$ pin should be kept low until the input AC coupling capacitors are fully charged before asserting the $\overline{EN}$ pin high. This way proper pre-charge of the AC coupling is performed, and pop-free power-up is achieved. Figure below illustrates the preferred sequence.

Figure 4. Power-Up Sequence

External Under Voltage Detection

External under voltage detection can be used to mute/shut down the TMI8320A before an input device can generate a pop.

The threshold seen at the UVP pin is 1.15V. A hysteresis is introduced with a resistive divider, where thresholds for startup and shutdown are determined respectively as follows:

Startup Threshold: $V_{UDPR} = 1.15 \times (R_{11} + R_{12}) / R_{12}$

Shutdown Threshold: $V_{UDPF} = 1.15 \times (R_{11} + R_{12}) / R_{12} - I_{uvp} \times (R_{13} + R_{11} \parallel R_{12}) \times (R_{11} + R_{12}) / R_{12}$

Hysteresis: $I_{uvp} \times (R_{13} + R_{11} \parallel R_{12}) \times (R_{11} + R_{12}) / R_{12}$

The R_{13} is optional. If the R_{13} is not used, the UVP pin connects to the divider center tap directly.

Figure 5. UVP Resistors

Capacitive Load

The TMI8320A has the ability to drive large capacitive load up to 220pF directly, and larger capacitive loads can be accepted by adding a series resistor of 47 Ω or larger.

Gain-Setting Resistors

The gain setting resistors, R_{IN} and R_{FB} , must be placed close to the input pins to minimize the capacitive loading on these pins and to ensure maximum stability of the TMI8320A.

Layout Consideration

For best performance of the TMI8320A, the following guidelines must be strictly followed.

- 1) 0.1 μ F decoupling capacitor must be close to PGND and PVDD pins.
- 2) Capacitor can be connected between PVDD and PGND pins directly and then connect PGND pin to GND layer.
