

Protective collar for emergency stop RAFIX 22 FS⁺**5.00.456.001/0000**

RAFI protective collars protect the pushbuttons from unintentional operation and damage. Another great advantage is that they can be mounted directly on the front panel using two screws and without mechanical attachment to the actuator and/or emergency stop pushbutton. This provides for additional safety because lateral forces are not transferred to the actuator housing. When using a protective collar, the draft EN ISO 13850, chapter 4.3.9 and 4.5.1 must be observed.

Note: This protective collar is not suitable for the RAFIX 22 FS⁺ Emergency stop pushbutton compact 1.30.273.301/2200.

**Other specifications**

ROHS compliant	yes
REACH compliant	yes
