# **USBF TV** (USB-A)

USB connection system for harsh environment

With USB Field, you can insert a standard USB 2.0 cordset into a metallic plug which will protect it from shocks, dust and fluids.

#### No hazardous on-field cabling and grounding!

This metallic plug is connected into a receptacle, using a Tri Start Thread coupling mechanism (MIL-DTL-38999 series III type) with anti-decoupling device for high vibrations.

#### **Applications**

- **■** Embedded computers
- Data acquisition and transmission in harsh environment
- Railways
- Battelfield communication systems
- Navy systems

#### Main characteristics

- Sealed against fluids and dusts (IP68)
- Shock, vibration and traction resistant
- No cabling operation in field and no tools required
- Improved EMI protection
- Tri Start Thread coupling mechanism (MIL-DTL-38999 series III type) with anti-decoupling device
- 2 mechanical coding / polarization possibilities by the user (receptacle insert rotation)
- USBF TV plug retention in the receptacle: 100 N in the axis
- Mating cycles: 500 minimum

#### **Environmental protection**

- Sealing (when mated): IP68 (temporary immersion)
- Salt spray: 48 h with nickel plating
  - > 500 h with olive drab cadmium 1000 h with marine bronze shell
- Fire retardant / low smoke: UL94 V0 and NF F 16 101 & 16 102
- Vibrations: 10 500 Hz, 10 g, 3 axes: no discontinuity > 1micro s
- Shocks: IK06: weight of 250 g drop from 40 cm [15.75 in] onto connectors (mated pair)
- Humidity: 21 days, 43°C, 98% humidity
- Temperature range: 40°C / +85°C

#### **Data transmission**

USB specification 2.0

Data rate: up to 480 Mbps for high speed USB

#### Part number code

Series **USBF TV USB Field TV** 

# Shell type

6: plug

2: square flange receptacle

2PE: square flange receptacle with metal backshell (type 1) & with metal backshell + plastic gland (type 2)

**2PEM:** square flange receptacle with backshell + metal gland (only for back termination type 2 = Solder)

**7PE:** jam nut receptacle with metal backshell (type 1) & with metal backshell + plastic gland (type 2)

**7PEM:** jam nut receptacle with backshell + metal gland (only for back termination type 2 = Solder)

#### Back terminations (receptacles only)

1: female USB-A

2: solder (4 tinned holes)

#### Shells material & finish

N: aluminium shell - nickel plating - ROHS compliant

G: aluminium shell - olive drab cadmium plating

**BZ:** marine bronze shell - ROHS compliant

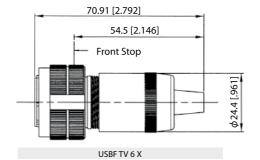

#### Examples:

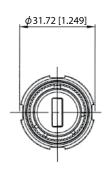

- Olive drab cadmium plug: USBF TV 6G
- Olive drab cadmium square flange receptacle, USB-A back terminat°: USBF TV 21G
- Olive drab cadmium jam nut receptacle, USB-A receptacle back terminat°: USBF TV 71G
- Nickel jam nut receptacle, solder back termination: USBF TV 72N

# Plug

■ Shell type 6

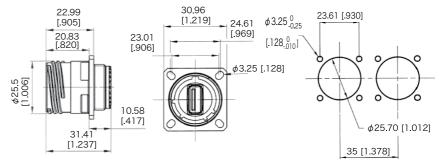

# **Receptacles**

■ Square flange receptacle 4 mounting holes: shell type 2

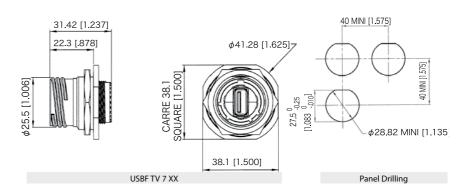

USBF TV 2 XX

Panel Drilling

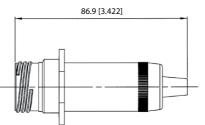

■ Jam nut receptacle Hexagonal nut mounting: shell type 7

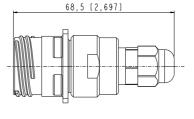

■ Receptacles with backshell: Shell type 2PE and 7PE

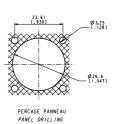

Backshell used with back termination type 1: USB A receptacle (Not sealed) Same panel drilling as USBFTV 2xx USBF TV 2PE / 7PE-1

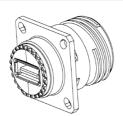

Backshell used with back termination type 2: Solder (Sealed – IP68) USBFTV 2PE(M) / 7PE(M)-2

Panel Drilling (for type 2 only)

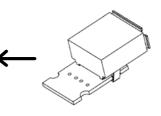

# **Back terminations**

Type 1: female USB-A

Type 2: solder 4 Tinned holes to solder your cable

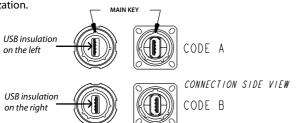

View of the PCB of the Type 2 version with 4 tinned holes for solder termination

### **Assembly instructions**

Can be used with most the USB cordset brands: No tools required!

#### Plug assembly

- 1. Only if you need a full sealing (IP68): Install the white sticker around the plug, covering the 4 little holes of the overmolding
- 2. Insert the black O Ring around the front face of the USB A plug. This O Ring will ensure connection sealing
- 3. Insert the USB cordset into the metallic backshell
- 4. Insert the retention spacer laterally to the cable (this spacer is soft, in order to adapt to different shapes of overmolding) and slide the overmolding of the USB-A plug into this retention spacer
- 5. Insert the friction ring laterally to the cable
- 6. Choose the right coding (2 positions) and insert the USB-A plug into the protective plug. Note at this step, the main key is used for polarization.

7. Screw the backshell on the plug body. A wrench can be necessary to fully tighten it, and the connection to the receptacle can help

#### **IMPORTANT NOTE**

The connection sealing is not done by the black retention spacer (which is sloted), but by the front face ORing (fig.2)

# Receptacle assembly

Insert the USB module from the rear. Reference is main key. Beware to have a coding compatible with the coding you used for the plug: on front view, the white shapes in the USBs must be on the same side.
