Weidmüller is one of the industry's leading international providers of connectors. An important mainstay in this product family are the circular connectors, which Weidmüller groups under the product name SAI. In the development of SAI products, Weidmüller engineers have always concentrated on achieving rational, cost-effective installation concepts, and – in cooperation with major users – have supplied the markets with well-conceived products which set standards in terms of functionality and quality across the globe. The best examples are the new power distributors with S and T coded M12. These modules are characterised by particularly high currents and voltages. This enables them to also be used, for example, with three-phase motors.

## PCB design

A diagram of a circular object, possibly a cross-section of a fruit or a mechanical part. It features a large outer circle and a smaller inner circle. Five small circles are arranged in a pentagonal pattern within the inner circle. Five numbers are placed around the outer circle: 1 at the bottom right, 2 at the top right, 3 at the top left, 4 at the middle left, and 5 at the bottom center.
