EVQ4425B-QB-00A

1.5A, 36V, 400kHz, High-Efficiency, Synchronous, Step-Down LED Driver Evaluation Board

DESCRIPTION

The EVQ4425B-QB-00A is an evaluation board for the MPQ4425B, a high-efficiency, synchronous, rectified, step-down, switch-mode LED driver with integrated internal power high-side and low-side MOSFETs (HS-FET and LS-FET, respectively).

The MPQ4425B offers a compact solution that achieves 1.5A of continuous output current, with excellent load and line regulation across a wide input supply range. Synchronous mode offers high efficiency during all operation.

The EVQ4425B-QB-00A is a fully assembled and tested evaluation board that generates load currents up to 1.5A across a 4V to 36V input voltage range.

ELECTRICAL SPECIFICATIONS

Parameter	Symbol	Value	Units
Input voltage	V_{EMI}	4 to 36	V
Output current	I_{OUT}	1.5	A

FEATURES

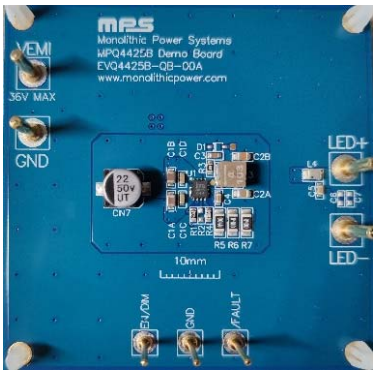

- Wide 4V to 36V Operating Input Range
- Internal 85mΩ HS-FET and 50mΩ LS-FET
- Synchronous Mode for High-Efficiency Operation
- 400kHz Default Switching Frequency
- PWM Dimming (100Hz Minimum Dimming Frequency)
- Forced Continuous Conduction Mode (FCCM)
- 0.2V Reference Voltage
- Internal Soft Start
- Fault Indication for LED Short/Open and Thermal Shutdown
- Over-Current Protection (OCP) with Valley Current Detection
- Thermal Shutdown
- Available in a QFN-13 (2.5mmx3mm) Package
- CISPR25 Class 5 Compliant
- Available in AEC-Q100 Grade 1

APPLICATIONS

- Automotive LED Lighting

All MPS parts are lead-free, halogen-free, and adhere to the RoHS directive. For MPS green status, please visit the MPS website under Quality Assurance. “MPS”, the MPS logo, and “Simple, Easy Solutions” are trademarks of Monolithic Power Systems, Inc. or its subsidiaries.

EVQ4425B-QB-00A EVALUATION BOARD

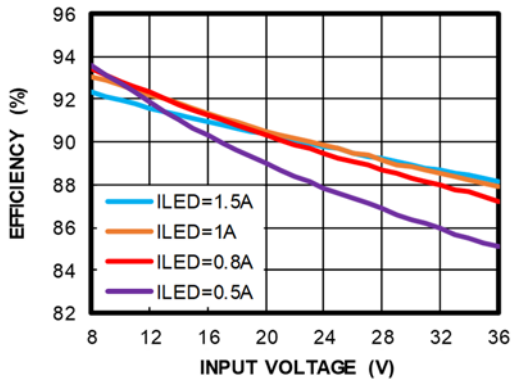

LxWxH (6.35cmx6.35cmx1.3cm)

Board Number	MPS IC Number
EVQ4425B-QB-00A	MPQ4425BGQ-AEC1

Efficiency vs. Input Voltage

V_{LED} = 6.4V

QUICK START GUIDE

1. Preset the power supply between 4V and 36V, then turn off the power supply.
2. If longer cables (>0.5m total) are being used between the source and the evaluation board, install a damping capacitor at the input terminals. This is critical when V_{IN} exceeds 24V.
3. Connect the power supply terminals to:
   a. Positive (+): VEMI
   b. Negative (-): GND
4. Connect the LED terminals to:
   a. Positive (+): LED+
   b. Negative (-): LED-
5. After making the connections, turn on the power supply. The MPQ4425B should automatically start up.
6. To use the enable (EN) function, apply a digital input to the EN pin. Drive EN above 1.45V to turn the regulator on; drive EN below 1V to turn it off.
7. To use the dimming function, apply a 100Hz to 2kHz external clock to the EN/DIM pin for pulse-width modulation (PWM) dimming.
8. The output current (I_{OUT}) is set by the external feedback resistor (R_{FB}). If the feedback reference voltage is 0.2V, I_{LED} can be calculated with Equation (1):

$$I_{LED} = \frac{0.2V}{R_{FB}} \quad (1)$$

   Figure 1 shows the feedback resistor network.

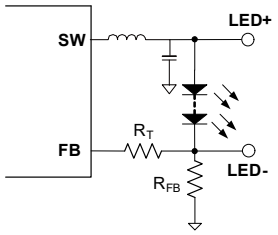

Figure 1: Feedback Resistor Network

9. A resistor (R_T) sets the loop bandwidth. A lower R_T results in higher bandwidth. However, a high bandwidth may cause insufficient phase margin, which causes an unstable loop. Choose an R_T value that achieves an appropriate tradeoff between bandwidth and phase margin.

   Table 1 shows the recommended minimum R_{FB} and R_T values for common outputs using 1-series or 2-series LEDs.

Table 1: Recommended Resistor Values

I_{LED} (A)	R_{FB} (mΩ)	R_T (kΩ)
0.5	400 (1%)	200 (1%)
1	200 (1%)	150 (1%)
1.5	133 (1%)	100 (1%)
