EIA/ITU 24V PABX SLIC with 25mA Loop Feed

The HC-5524 telephone Subscriber Line Interface Circuit integrates most of the BORSCHT functions on a monolithic IC. The device is manufactured in a Dielectric Isolation (DI) process and is designed for use as a 24V interface between the traditional telephone subscriber pair (Tip and Ring) and the low voltage filtering and coding/decoding functions of the line card. Together with a secondary protection diode bridge, the device will withstand 500V induced surges, in plastic packages. The SLIC also maintains specified transmission performance in the presence of externally induced longitudinal currents. The BORSCHT functions that the SLIC provides are:

- Battery Feed with Subscriber Loop Current Limiting
- Overvoltage Protection
- Ring Relay Driver
- Supervisory Signaling Functions
- Hybrid Functions (with External Op-Amp)
- Test (or Battery Reversal) Relay Driver

In addition, the SLIC provides selective denial of power to subscriber loops, a programmable subscriber loop current limit from 20mA to 60mA, a thermal shutdown with an alarm output and line fault protection. Switch hook detection, ring trip detection and ground key detection functions are also incorporated in the SLIC device.

The HC-5524 SLIC is ideally suited for line card designs in PBX and DLC systems, replacing traditional transformer solutions.

Ordering Information

PART NUMBER	TEMP. RANGE (^{o}C)	PACKAGE	PKG. NO.
HC3-5524-5	0 to 75	28 Ld PDIP	E28.6
HC3-5524-9	-40 to 85	28 Ld PDIP	E28.6
HC4P5524-5	0 to 75	44 Ld PLCC	N44.65
HC4P5524-9	-40 to 85	44 Ld PLCC	N44.65
HC9P5524-5	0 to 75	28 Ld SOIC	M28.3
HC9P5524-9	-40 to 85	28 Ld SOIC	M28.3

Features

- DI Monolithic High Voltage Process
- Compatible with Worldwide PBX and DLC Performance Requirements
- Controlled Supply of Battery Feed Current with Programmable Current Limit
- Operates with 5V Positive Supply (V_{B}+)
- Internal Ring Relay Driver and a Utility Relay Driver
- High Impedance Mode for Subscriber Loop
- High Temperature Alarm Output
- Low Power Consumption During Standby Functions
- Switch Hook, Ground Key, and Ring Trip Detection
- Selective Power Denial to Subscriber
- Voice Path Active During Power Denial
- On-Chip Op Amp for 2-Wire Impedance Matching

Applications

- Solid State Line Interface Circuit for PBX or Digital Loop Carrier Systems
- Hotel/Motel Switching Systems
- Direct Inward Dialing (DID) Trunks
- Voice Messaging PBXs
- 2-Wire/4-Wire, 4-Wire/2-Wire Hybrid

Absolute Maximum Ratings (Note 1)

Maximum Supply Voltages
- (V_B+) . . . . . -0.5V to 7V
- (V_B+) - (V_B-) 40V

Relay Drive Voltage . . . . . -0.5V to 15V

Operating Conditions

Operating Temperature Range
- HC-5524-5 . . . . . 0°C to T_A to 75°C
- HC-5524-9 . . . . . -40°C to T_A to 85°C

Relay Driver Voltage . . . . . 5V to 12V

Positive Power Supply (V_B+) . . . . . 5V ±5%

Negative Power Supply (V_B-) . . . . . -20V to -28V

Thermal Information

Thermal Resistance (Typical, Note 2)	θ_{JA} (°C/W)
PDIP Package	55
PLCC Package	47
SOIC Package	75

Maximum Junction Temperature (Plastic Package) . . . . . 150°C

Maximum Storage Temperature Range . . . . . -65°C to T_A to 150°C

Maximum Lead Temperature (Soldering 10s) . . . . . 300°C
(PLCC and SOIC - Lead Tips Only)

Die Characteristics

Transistor Count 224

Diode Count 28

Die Dimensions . . . . . .174 mils x 120 mils

Substrate Potential . . . . . Connected

Process . . . . . Bipolar-DI

CAUTION: Stresses above those listed in "Absolute Maximum Ratings" may cause permanent damage to the device. This is a stress only rating and operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied.

NOTES:

1. Absolute maximum ratings are limiting values, applied individually, beyond which the serviceability of the circuit may be impaired. Functional operability under any of these conditions is not necessarily implied.
2. θ_{JA} is measured with the component mounted on an evaluation PC board in free air.

Electrical Specifications

Typical Parameters are at T_A = 25°C, V_B+ = 5V, V_B- = -24V, AG = DG = BG = 0V. Min-Max Parameters are Over Operating Positive and Negative Battery Voltages and Over the Operating Temperature Range. All Parameters are Specified at 600W 2-Wire Terminating Impedance, Unless Otherwise Specified

PARAMETER	TEST CONDITIONS	MIN	TYP	MAX	UNITS
AC TRANSMISSION PARAMETERS					
RX Input Impedance	300Hz to 3.4kHz, (Note 3)	-	100	-	kΩ
TX Output Impedance		-	-	20	Ω
4-Wire Input Overload Level	300Hz to 3.4kHz, 600Ω Reference	+1.0	-	-	V_{PEAK}

NOTE:

3. These parameters are controlled by design or process parameters and are not directly tested. These parameters are characterized upon initial design release, upon design changes which would affect these characteristics, and at intervals to assure product quality and specification compliance.

Pin Descriptions

DIP/ SOIC	PLCC	SYMBOL	DESCRIPTION
1	2	AG (Note 4)	Analog Ground - To be connected to zero potential. Serves as a reference for the transmit output and receive input terminals.
2	3	V_B+	Positive Voltage Source - Most Positive Supply.
3	4	C_1	Capacitor #C_1 - An external capacitor to be connected between this terminal and analog ground. Required for proper operation of the loop current limiting function.
4	8	F1	Function Address #1 - A TTL and CMOS compatible input used with F0 function address line to externally select logic functions. The three selectable functions are mutually exclusive. See Truth Table on front page. F1 should be toggled high after power is applied.
5	9	F0	Function Address #0 - A TTL and CMOS compatible input used with F1 function address line to externally select logic functions. The three selectable functions are mutually exclusive. See Truth Table on front page.
6	10	RS	Ring Synchronization Input - A TTL - compatible clock input. The clock is arranged such that a positive pulse (50µs - 500µs) occurs on the zero crossing of the ring voltage source, as it appears at the RFS terminal. For Tip side injected systems, the RS pulse should occur on the negative going zero crossing and for Ring injected systems, on the positive going zero crossing. This ensures that the ring delay activates and deactivates when the instantaneous ring voltage is near zero. If synchronization is not required, the pin should be tied to +5V.

Pin Descriptions (Continued)

DIP/ SOIC	PLCC	SYMBOL	DESCRIPTION
7	11	$\overline{SHD}$	Switch Hook Detection - An active low LS TTL compatible logic output. A line supervisory output.
8	12	$\overline{GKD}$	Ground Key Detection - An active low LS TTL compatible logic output. A line supervisory output.
9	13	$\overline{TST}$	A TTL logic input. A low on this pin will set a latch and keep the SLIC in a power down mode until the proper F1, F0 state is set and will keep $\overline{ALM}$ low. See Truth Table on front page.
10	17	$\overline{ALM}$	A LS TTL compatible active low output which responds to the thermal detector circuit when a safe operating die temperature has been exceeded. When $\overline{TST}$ is forced low by an external control signal, $\overline{ALM}$ is latched low until the proper F1, F0 state and $\overline{TST}$ input is brought high. The $\overline{ALM}$ can be tied directly to the $\overline{TST}$ pin to power down the part when a thermal fault is detected and then reset with F0, F1. See Truth Table on front page. It is possible to ignore transient thermal overload conditions in the SLIC by delaying the response to the $\overline{TST}$ pin from the $\overline{ALM}$. Care must be exercised in attempting this as continued thermal overstress may reduce component life.
11	18	I_{LIMIT}	Loop Current Limit - Voltage on this pin sets the short loop current limiting conditions using a resistive voltage divider.
12	19	OUT1	The analog output of the spare operational amplifier.
13	20	-IN1	The inverting analog input of the spare operational amplifier.
14	22	TIP	An analog input connected to the TIP (more positive) side of the subscriber loop through a feed resistor and ring relay contact. Functions with the RING terminal to receive voice signals from the telephone and for loop monitoring purposes.
15	24	RING	An analog input connected to the RING (more negative) side of the subscriber loop through a feed resistor. Functions with the TIP terminal to receive voice signals from the telephone and for loop monitoring purposes.
16	25	RFS	Ring Feed Sense - Senses RING side of the loop for Ground Key Detection. During Ring injected ringing the ring signal at this node is isolated from RF via the ring relay. For Tip injected ringing, the RF and RFS pins must be shorted.
17	27	V_{RX}	Receive Input, 4-Wire Side - A high impedance analog input. AC signals appearing at this input drive the Tip Feed and Ring Feed amplifiers differentially.
18	31	C_2	Capacitor #2 - An external capacitor to be connected between this terminal and ground. It prevents false ring trip detection from occurring when longitudinal currents are induced onto the subscriber loop from power lines and other noise sources. This capacitor should be nonpolarized.
19	32	V_{TX}	Transmit Output, 4-Wire Side - A low impedance analog output which represents the differential voltage across TIP and RING. Transhybrid balancing must be performed beyond this output to completely implement two to four wire conversion. This output is referenced to analog ground. Since the DC level of this output varies with loop current, capacitive coupling to the next stage is necessary.
20	33	PRI	A TTL compatible input used to control $\overline{PR}$. PRI active High = $\overline{PR}$ active low.
21	34	$\overline{PR}$	An active low open collector output. Can be used to drive a Polarity Reversal Relay.
22	35	DG (Note 4)	Digital Ground - To be connected to zero potential. Serves as a reference for all digital inputs and outputs on the SLIC.
23	36	$\overline{RD}$	Ring Relay Driver - An active low open collector output. Used to drive a relay that switches ringing signals onto the 2-Wire line.
24	37	V_{FB} (Note 5)	Feedback input to the tip feed amplifier; may be used in conjunction with transmit output signal and the spare op-amp to accommodate 2-Wire line impedance matching. (This is not used in the typical applications circuit).
25	38	TF_2	Tip Feed - A low impedance analog output connected to the TIP terminal through a feed resistor. Functions with the RF terminal to provide loop current, and to feed voice signals to the telephone set and to sink longitudinal currents. Must be tied to TF_1.
NA	39	TF_1	Tie directly to TF_2 in the PLCC application.
26	41	RF_1	Ring Feed - A low impedance analog output connected to the RING terminal through a feed resistor. Functions with the TF terminal to provide loop current, feed voice signals to the telephone set, and to sink longitudinal currents. Tie directly to RF2.
NA	42	RF_2	Tie directly to RF_1 in the PLCC application.
27	43	V_B-	The battery voltage source. The most negative supply.

Pin Descriptions (Continued)

DIP/ SOIC	PLCC	SYMBOL	DESCRIPTION
28	44	BG (Note 4)	Battery Ground - To be connected to zero potential. All loop current and some quiescent current flows into this ground terminal.
	1, 5, 6, 7, 14, 15, 16, 21, 23, 26, 28, 29, 30, 40	NC	No internal connection.

NOTES:

4. All grounds (AG, BG, and DG) must be applied before V_B+ or V_B-. Failure to do so may result in premature failure of the part. If a user wishes to run separate grounds off a line card, the AG must be applied first.
5. Although not used in the typical applications circuit, V_{FB} may be used in matching complex 2-Wire impedances.

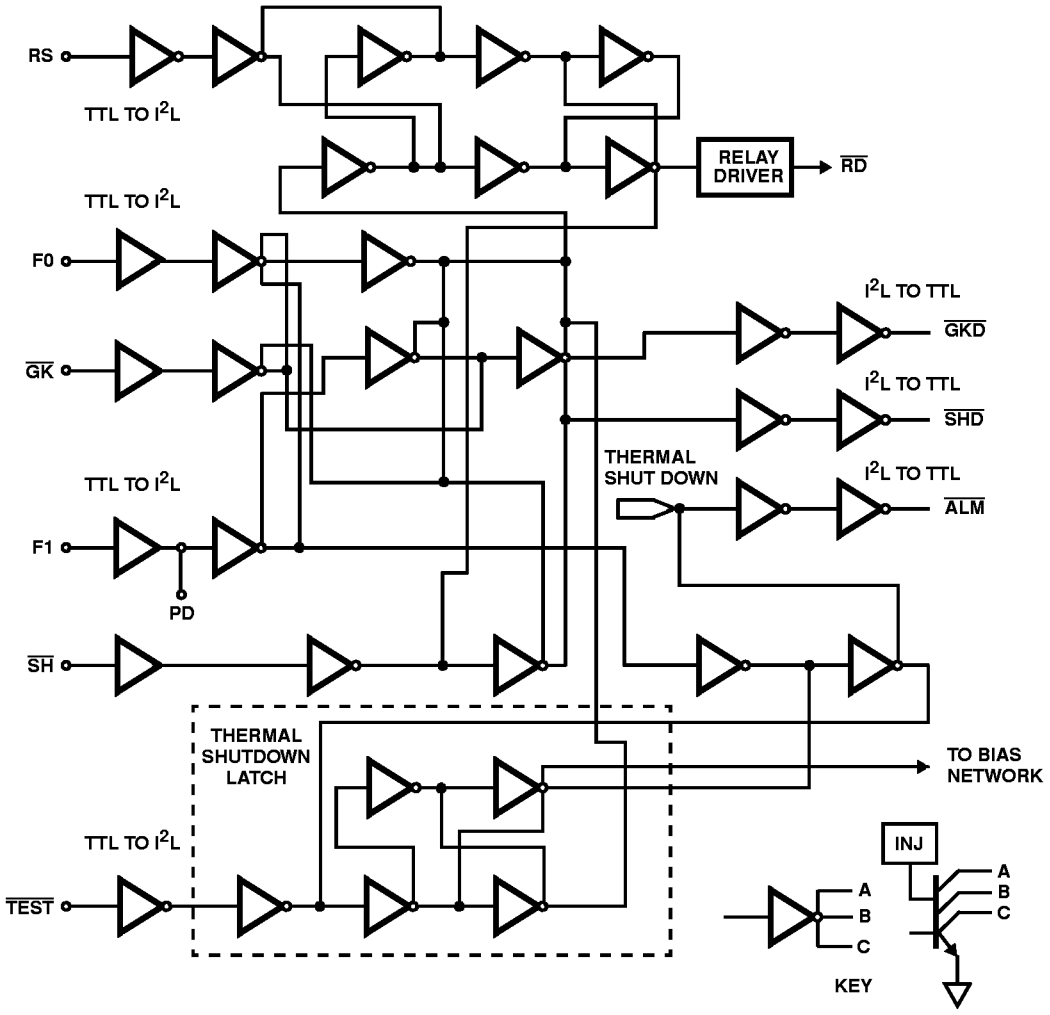
Logic Diagram



Overvoltage Protection and Longitudinal Current Protection

The SLIC device, in conjunction with an external protection bridge, will withstand high voltage lightning surges and power line crosses.

High voltage surge conditions are as specified in Table 1.

The SLIC will withstand longitudinal currents up to a maximum or $40mA_{RMS}$, $20mA_{RMS}$ per leg, without any performance degradation.

TABLE 1.

PARAMETER	TEST CONDITION	PERFORMANCE (MAX)	UNITS
Longitudinal Surge	10µs Rise/ 1000µs Fall	±1000 (Plastic)	V_{PEAK}
Metallic Surge	10µs Rise/ 1000µs Fall	±1000 (Plastic)	V_{PEAK}
T/GND R/GND	10µs Rise/ 1000µs Fall	±1000 (Plastic)	V_{PEAK}
50/60Hz Current T/GND R/GND	11 Cycles Limited to $10A_{RMS}$	700 (Plastic)	V_{RMS}

Typical Applications

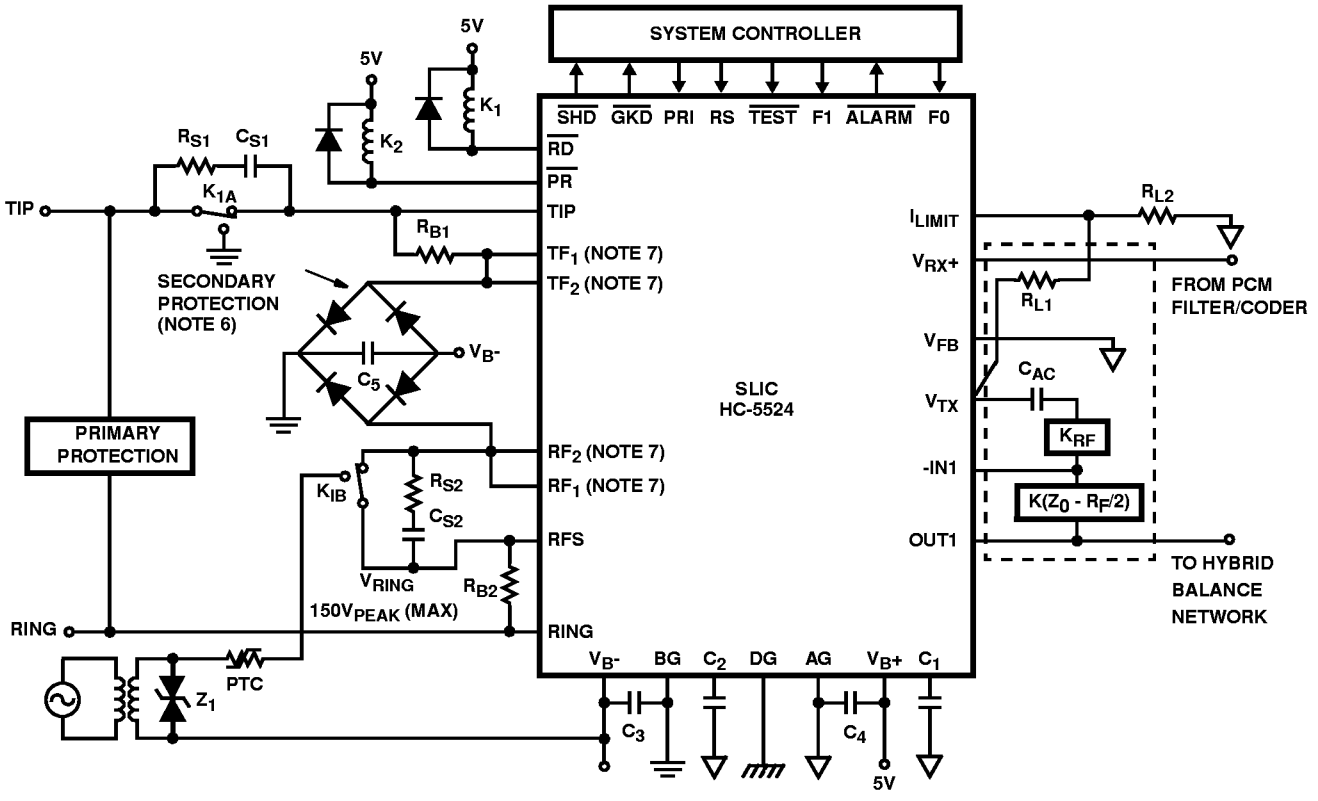


FIGURE 1. TYPICAL LINE CIRCUIT APPLICATION WITH THE MONOLITHIC SLIC

Typical Component Values

C_1 = 0.5µF, 20V.

C_2 = 1.0µF ±10%, 20V (for other values of C2, refer to AN9667).

C_3 = 0.01µF, 50V ±20%.

C_4 = 0.01µF, 50V ±20%.

C_5 = 0.01µF, 50V ±20%.

C_{AC} = 0.5µF, 20V.

$K(Z_0 - R_F/2)$ = 50kΩ, (Z_0 = 600Ω, K = Scaling Factor = 100).

R_{L1}, R_{L2}; Current Limit Setting Resistors.
$R_{L1}+R_{L2} > 90k\Omega$.

$I_{LIMIT} = (.6)\ (R_{L1} + R_{L2})/(200 \times R_{L2})$, R_{L1} typically 100kΩ.

KR_F = 20kΩ, $R_F = 2(R_{B1}+R_{B2})$, K = Scaling Factor = 100).

$R_{B1} = R_{B2}$ = 50Ω (1% absolute, matching requirements covered in a Tech Brief).

$R_{S1} = R_{S2}$ = 1kΩ typically.

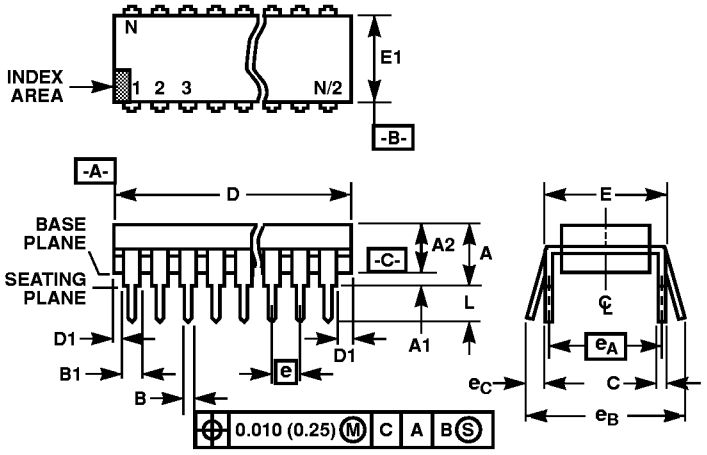
$C_{S1} = C_{S2}$ = 0.1µF, 200V typically, depending on V_{Ring} and line length.

Z_1 = 150V to 200V transient protector. PTC used as ring generator ballast.

NOTES:

8. All grounds (AG, BG, and DG) must be applied before V_B+ or V_B-. Failure to do so may result in premature failure of the part. If a user wishes to run separate grounds off a line card, the AG must be applied first.
9. Application shows Ring Injected Ringing, Balanced or Tip injected configuration may be used.
10. Secondary protection diode bridge recommended is 3A, 200V type.
11. TF_1, TF_2 and RF_1, RF_2 are on PLCC only and should be connected together as shown.

Dual-In-Line Plastic Packages (PDIP)



NOTES:

1. Controlling Dimensions: INCH. In case of conflict between English and Metric dimensions, the inch dimensions control.
2. Dimensioning and tolerancing per ANSI Y14.5M-1982.
3. Symbols are defined in the "MO Series Symbol List" in Section 2.2 of Publication No. 95.
4. Dimensions A, A1 and L are measured with the package seated in JEDEC seating plane gauge GS-3.
5. D, D1, and E1 dimensions do not include mold flash or protrusions. Mold flash or protrusions shall not exceed 0.010 inch (0.25mm).
6. E and e_A are measured with the leads constrained to be perpendicular to datum -C-.
7. e_B and e_C are measured at the lead tips with the leads unconstrained. e_C must be zero or greater.
8. B1 maximum dimensions do not include dambar protrusions. Dambar protrusions shall not exceed 0.010 inch (0.25mm).
9. N is the maximum number of terminal positions.
10. Corner leads (1, N, N/2 and N/2 + 1) for E8.3, E16.3, E18.3, E28.3, E42.6 will have a B1 dimension of 0.030 - 0.045 inch (0.76 - 1.14mm).

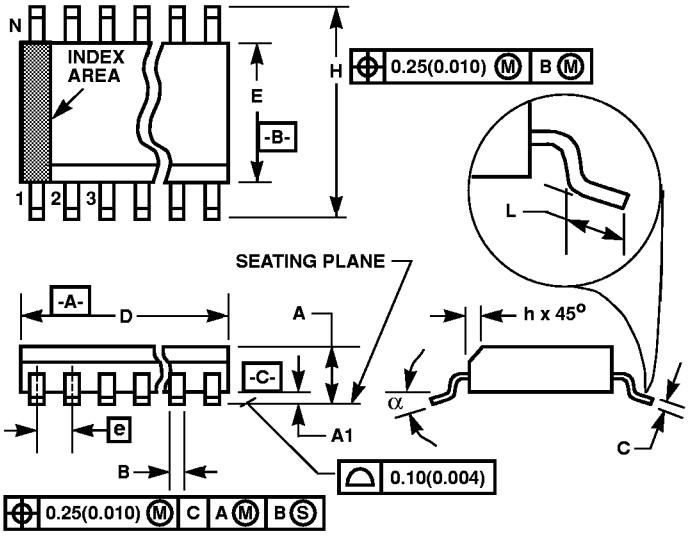
Small Outline Plastic Packages (SOIC)



NOTES:

1. Symbols are defined in the "MO Series Symbol List" in Section 2.2 of Publication Number 95.
2. Dimensioning and tolerancing per ANSI Y14.5M-1982.
3. Dimension "D" does not include mold flash, protrusions or gate burrs. Mold flash, protrusion and gate burrs shall not exceed 0.15mm (0.006 inch) per side.
4. Dimension "E" does not include interlead flash or protrusions. Interlead flash and protrusions shall not exceed 0.25mm (0.010 inch) per side.
5. The chamfer on the body is optional. If it is not present, a visual index feature must be located within the crosshatched area.
6. "L" is the length of terminal for soldering to a substrate.
7. "N" is the number of terminal positions.
8. Terminal numbers are shown for reference only.
9. The lead width "B", as measured 0.36mm (0.014 inch) or greater above the seating plane, shall not exceed a maximum value of 0.61mm (0.024 inch)
10. Controlling dimension: MILLIMETER. Converted inch dimensions are not necessarily exact.

Rev. 2 11/97

NOTES:

1. Controlling dimension: INCH. Converted millimeter dimensions are not necessarily exact.
2. Dimensions and tolerancing per ANSI Y14.5M-1982.
3. Dimensions D1 and E1 do not include mold protrusions. Allowable mold protrusion is 0.010 inch (0.25mm) per side. Dimensions D1 and E1 include mold mismatch and are measured at the extreme material condition at the body parting line.
4. To be measured at seating plane -C- contact point.
5. Centerline to be determined where center leads exit plastic body.
6. "N" is the number of terminal positions.

All Harris Semiconductor products are manufactured, assembled and tested under **ISO9000** quality systems certification.
