

April 1995

50A, 700V - 1000V Hyperfast Diodes

Features

- Hyperfast with Soft Recovery <75ns
- Operating Temperature +175°C
- Reverse Voltage Up to 1000V
- Avalanche Energy Rated
- Planar Construction

Applications

- Switching Power Supplies
- Power Switching Circuits
- General Purpose

Description

RHRG5070, RHRG5080, RHRG5090 and RHRG50100 (TA49066) are hyperfast diodes with soft recovery characteristics ($t_{RR} < 75\text{ns}$). They have half the recovery time of ultralast diodes and are silicon nitride passivated ion-implanted epitaxial planar construction.

These devices are intended for use as freewheeling/clamping diodes and rectifiers in a variety of switching power supplies and other power switching applications. Their low stored charge and hyperfast soft recovery minimize ringing and electrical noise in many power switching circuits reducing power loss in the switching transistors.

PACKAGING AVAILABILITY

PART NUMBER	PACKAGE	BRAND
RHRG5070	TO-247	RHRG5070
RHRG5080	TO-247	RHRG5080
RHRG5090	TO-247	RHRG5090
RHRG50100	TO-247	RHRG50100

NOTE: When ordering, use the entire part number.

DEFINITIONS

V_F = Instantaneous forward voltage ($p_w = 300\mu\text{s}$, $D = 2\%$).

I_R = Instantaneous reverse current.

t_{RR} = Reverse recovery time (See Figure 2), summation of $t_A + t_B$.

t_A = Time to reach peak reverse current (See Figure 2).

t_B = Time from peak I_{RM} to projected zero crossing of I_{RM} based on a straight line from peak I_{RM} through 25% of I_{RM} (See Figure 2).

$R_{\theta JC}$ = Thermal resistance junction to case.

E_{AVL} = Controlled avalanche energy. (See Figures 7 and 8).

p_w = pulse width.

D = duty cycle.
