

March 1997

Features

- Fully Static Operation
- Industry Standard 1024 x 4 Pinout (Same as Pinouts for 6514, 2114, 9114, and 4045 Types)
- Common Data Input and Output
- Memory Retention for Standby Battery Voltage as Low as 2V Min
- All Inputs and Outputs Directly TTL Compatible
- Three-State Outputs
- Low Standby and Operating Power

Description

The MWS5114 is a 1024 word by 4-bit static random access memory that uses the ion-implanted silicon gate complementary MOS (CMOS) technology. It is designed for use in memory systems where low power and simplicity in use are desirable. This type has common data input and data output and utilizes a single power supply of 4.5V to 6.5V.

The MWS5114 is supplied in 18 lead, hermetic, dual-in-line sidebraced ceramic packages (D suffix) and in 18 lead dual-in-line plastic packages (E suffix).
