Rochester Electronics

Datasheet

PART NUMBER

74LS794N

Rochester Electronics Manufactured Components

Rochester branded components are manufactured using either die/wafers purchased from the original suppliers or Rochester wafers recreated from the original IP. All re-creations are done with the approval of the Original Component Manufacturer. (OCM)

Parts are tested using original factory test programs or Rochester developed test solutions to guarantee product meets or exceeds the OCM data sheet.

Quality Overview

- ISO-9001
- AS9120 certification
- Qualified Manufacturers List (QML) MIL-PRF-38535
    - Class Q Military
    - Class V Space Level

Qualified Suppliers List of Distributors (QSLD)

- Rochester is a critical supplier to DLA and meets all industry and DLA standards.

Rochester Electronics, LLC is committed to supplying products that satisfy customer expectations for quality and are equal to those originally supplied by industry manufacturers.

The original manufacturer's datasheet accompanying this document reflects the performance and specifications of the Rochester manufactured version of this device. Rochester Electronics guarantees the performance of its semiconductor products to the original OCM specifications. 'Typical' values are for reference purposes only. Certain minimum or maximum ratings may be based on product characterization, design, simulation, or sample testing.

8-Bit Latch/Register with Readback

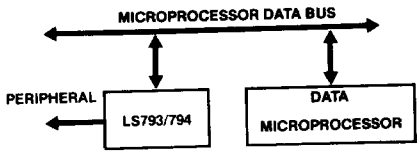
SN54/74LS793 SN54/74LS794

Features/Benefits

- **I/O port configuration enables output data back onto input bus**
- **8-bit data path matches byte boundaries**
- **Ideal for microprocessor interface**

Description

These 8-bit latches/registers are useful for I/O operations on a microprocessor bus. An image of the output data can be read back by the CPU. This operation is important in control algorithms which make decisions based on the previous status of output controls. Rather than storing a redundant copy of the output data in memory, simply reading the register as an I/O port allows the data to be retrieved from where it has been stored in an 'LS793/4, for verification and/or updating.



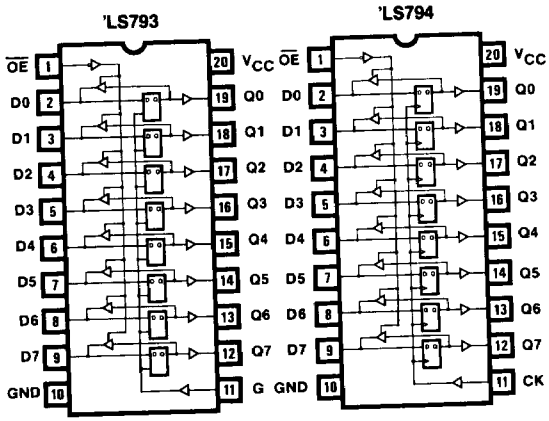
The data is loaded in the registers on the low-to-high transition of the clock (CK), for the 'LS794. The data is passed through the 'LS793 when the gate, (G), is High, and it is "latched" when G changes to Low. The output enable, $\overline{OE}$ is used to enable data on D7-D0. When $\overline{OE}$ is low the output of the latches/registers is enabled on D0-D7, enabling D as an output bus so that the host can perform a read operation. When $\overline{OE}$ is High, D7-D0 are inputs to the latches/registers configuring D as an input bus.

The output drive of these commercial parts for any output pin is I_{OL} = 24 mA.

Ordering Information

PART NUMBER	PKG	TEMP	POLARITY	TYPE	POWER
SN54LS793 SN74LS793	J,W,L, N,J,NL	Mil Com	Non-invert	Latch	LS
SN54LS794 SN74LS794	J,W,L, N,J,NL	Mil Com		Register	

Logic Symbols



'LS793 Function Table

G	$\overline{OE}$	Q	D
L	L	Q_0**	Output, Q
L	H	Q_0**	Input
H†	L	D*	Output, Q*
H	H	D	Input

* In this case the output of the latch feeds the input, and a "race" condition results.

** Q_0 represents the previous "latched" state.

† This transition is not a normal mode of operation and may produce hazards.

'LS794 Function Table

CK	$\overline{OE}$	Q	D
L or H or ↓	L	Q_0	Output, Q
L or H or ↓	H	Q_0	Input
↑	L	Q_0	Output, Q*
↑	H	D	Input

* In this case the output of the register is clocked to the inputs and the overall Q output is unchanged at Q_0.

Absolute Maximum Ratings

Supply voltage V_{CC} ..... -0.5 V to 7 V
Input voltage ..... -1.5 V to 7 V
Off-state output voltage ..... -0.5 V to 5.5 V
Storage temperature ..... -65°C to +150°C

Operating Conditions

SYMBOL	PARAMETER			MILITARY MIN	MILITARY TYP	MILITARY MAX	COMMERCIAL MIN	COMMERCIAL TYP	COMMERCIAL MAX	UNIT
V_{CC}	Supply voltage			4.5	5	5.5	4.75	5	5.25	V
T_A	Operating free air temperature			-55		125	0		75	°C
t_w	Width of Clock/Gate	High		15			15			ns
		Low ('LS794 only)		15			15			
t_{su}	Setup time		'LS793	15↓			10↓			ns
			'LS794	15↑			15↑			
t_h	Hold time		'LS793	10↓			10↓			
			'LS794	0↑			0↑			

↑ ↓ The arrow indicates the transition of the clock/gate input used for reference. ↑ for the low-to-high transitions, ↓ for the high-to-low transitions.

Electrical Characteristics Over Operating Conditions

SYMBOL	PARAMETER		TEST CONDITIONS		MILITARY MIN	MILITARY TYP	MILITARY MAX	COMMERCIAL MIN	COMMERCIAL TYP	COMMERCIAL MAX	UNIT
