

IGBT Modules

Power Module (V series) 1700V / 200A / 2-in-1 package

■ Features

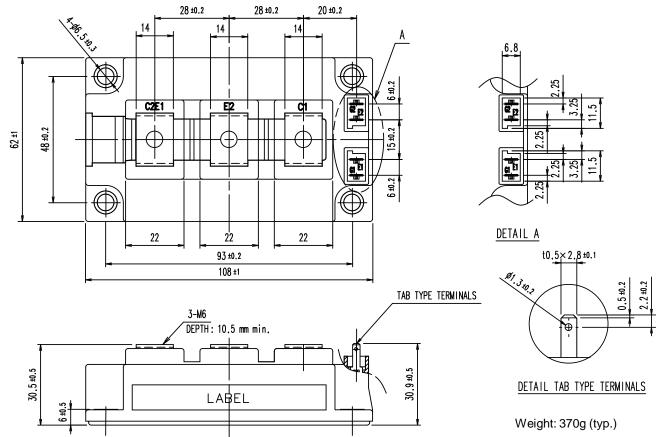

AC-switch
High speed switching
Voltage drive
Low Inductance module structure

■ Applications

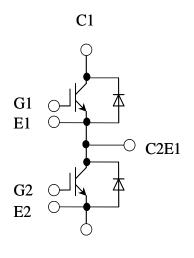

AC-switch for UPS,PCS and etc.

■ Outline drawing (Unit:mm)

■ Equivalent circuit

IGBT Modules

■ Absolute maximum ratings (at T_C= 25°C unless otherwise specified)

Items		Symbols	Conditions		Maximum ratings	Units
Collector-Emitter voltage		V _{CES}			1700	V
Gate-Emitter	voltage	V _{GES}			±20	V

■ Electrical characteristics (at T_j= 25°C unless otherwise specified)

NOTICE:

The external gate resistance (R_{g_on} , R_{g_off}) shown below is one of our recommend value for the purpose of minimum switching loss. However the optimum R_g depends on circuit configuration and/or environment. We recommend that the R_g has to be carefully chosen based on consideration if IGBT module matches design criteria, for example, switching loss, EMC/EMI, spike voltage, surge current and no unexpected oscillation and so on.Especially,we recommend to choose R_{g_on} value shown in below or more. Otherwise it might be exceeded the FWD safe operating area.

Warnings

- This Catalog contains the product specifications, characteristics, data, materials, and structures as of
 The contents are subject to change without notice for specification changes or other reasons. When using a product listed
 in this Catalog, be sure to obtain the latest specifications.
- 2. All applications described in this Catalog exemplify the use of Fuji's products for your reference only. No right or license, either express or implied, under any patent, copyright, trade secret or other intellectual property right owned by Fuji Electric Co., Ltd. is (or shall be deemed) granted. Fuji Electric Co., Ltd. makes no representation or warranty, whether express or implied, relating to the infringement or alleged infringement of other's intellectual property rights which may arise from the use of the applications described herein.
- 3. Although Fuji Electric Co., Ltd. is enhancing product quality and reliability, a small percentage of semiconductor products may become faulty. When using Fuji Electric semiconductor products in your equipment, you are requested to take adequate safety measures to prevent the equipment from causing a physical injury, fire, or other problem if any of the products become faulty. It is recommended to make your design fail-safe, flame retardant, and free of malfunction.
- 4. The products introduced in this Catalog are intended for use in the following electronic and electrical equipment which has normal reliability requirements.
- ·Computers ·OA equipment ·Communications equipment (terminal devices) ·Measurement equipment
- · Machine tools · Audiovisual equipment · Electrical home appliances · Personal equipment · Industrial robots etc.
- 5. If you need to use a product in this Catalog for equipment requiring higher reliability than normal, such as for the equipment listed below, it is imperative to contact Fuji Electric Co., Ltd. to obtain prior approval. When using these products for such equipment, take adequate measures such as a backup system to prevent the equipment from malfunctioning even if a Fuji's product incorporated in the equipment becomes faulty.
 - ·Transportation equipment (mounted on cars and ships) ·Trunk communications equipment
 - $\cdot \text{Traffic-signal control equipment} \ \cdot \text{Gas leakage detectors with an auto-shut-off feature}$
 - · Emergency equipment for responding to disasters and anti-burglary devices · Safety devices · Medical equipment
- 6. Do not use products in this Catalog for the equipment requiring strict reliability such as the following and equivalents to strategic equipment (without limitation).
 - · Space equipment · Aeronautic equipment · Nuclear control equipment · Submarine repeater equipment
