

2:1 Active HDMI™ Compatible Switch with Optimized Equalization for Enhanced Signal Integrity

Features

- Supply voltage, $V_{DD} = 3.3V \pm 5\%$
- Each Port can support DVI or HDMI™ signals
- Supports both AC-coupled and DC-coupled inputs
- Supports Deep Color™
- High Performance, up to 2.5 Gbps per channel
- Switching support for 3 side band signals (SCL, SDA and HPD)
- 5V Tolerance on all side band signals
- SCL, SDA, and HPD pins are the only pins that can support HOT INSERTION
- Integrated 50-ohm ($\pm 10\%$) termination resistors at each high speed signal input
- TMDS input termination control on all high speed inputs
- HDCP reset circuitry for quick communication when switching from one port to another
- Configurable output swing control (500mV, 750mV, 1000mV)
- Configurable Pre-Emphasis levels (0dB, 1.5dB, 3.5dB, & 6.0dB)
- Configurable De-Emphasis (0dB, -3.5dB, -6.0dB, -9.5dB)
- Optimized Equalization
Single default setting will support all cable lengths
- 8kV Contact ESD protection on all input data/clock pins per IEC61000-4-2
- Propagation delay $\leq 2ns$
- High Impedance Outputs when disabled
- Packaging (Pb-free & Green): 56-contact TQFN (ZF56)

Description

Pericom Semiconductor's PI3HDMI201 2:1 active switch circuit is targeted for high-resolution video networks that are based on DVI/HDMI™ standards and TMDS signal processing. The PI3HDMI201 is an active 2 TMDS to 1 TMDS receiver switch with Hi-Z outputs. The device receives differential signals from selected video components and drives the video display unit. It provides three controllable output swings. The allowable output swings are 500mV, 750mV and 1000mV. This solution also provides a unique advanced pre-emphasis technique to increase rise and fall times which are reduced during transmission across long distances.

Each complete HDMI™/DVI channel also has slower speed, side band signals, that are required to be switched. Pericom's solution provides a complete solution by integrating the side band switch together with the high speed switch in a single solution. Using Equalization at the input of each of the high speed channels, Pericom can successfully eliminate deterministic jitter caused by long cables from the source to the sink. The elimination of the deterministic jitter allows the user to use much longer cables (up to 25 meters).

The maximum DVI/HDMI™ Bandwidth of 2.5 Gbps provides 36-bit deep color™ support, which is offered by HDMI™ revision 1.3. Due to its active uni-directional feature, this switch is designed for usage only for the video receiver's side. For consumer video networks, the device sits at the receiver's side to switch between multiple video components, such as PC, DVD, STB, D-VHS, etc. The PI3HDMI201 also provides enhanced robust ESD/EOS protection of 8kV, which is required by many consumer video networks today.

The Optimized Equalization provides the user a single optimal setting that can provide HDMI™ compliance in regards to jitter for all cable lengths: 1meter to 20meters and color depths of 8bit/ch, or 12bit/ch.

Pericom also offers the ability to fine tune the equalization settings in situations where cable length is known. For example, if 25meter cable length is required, Pericom's solution can be adjusted to 16dB EQ to accept 25meter cable length.

Pin Configuration (Top View)

Receiver Block

Each input has integrated equalization that can eliminate deterministic jitter caused by 25meter 24AWG cables. All activity can be configured using pin strapping. The Rx block is designed to receive all relevant signals directly from the HDMI™ connector without any additional circuitry, 3 High speed TMDS data, 1 pixel clock, 1 HPD signal, and DDC signals. TMDS channels have following termination scheme for Rx Sense support.

x = A or B

Maximum Ratings

(Above which useful life may be impaired. For user guidelines, not tested.)

Storage Temperature	–65°C to +150°C
Supply Voltage to Ground Potential.....	–0.5V to +4.0V
DC Input Voltage	–0.5V to V_{DD}
DC Output Current.....	120mA
Power Dissipation	1.0W

Note:

Stresses greater than those listed under MAXIMUM RATINGS may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect reliability.

Application Information

Supply Voltage

All V_{DD} pins are recommended to have a 0.01uF capacitor tied from V_{DD} to GND to filter supply noise

TMDS inputs

Standard TMDS terminations have already been integrated into Pericom's PI3HDMI201 device. Therefore, external terminations are not required. Any unused port must be left floating and not tied to GND.
