

HLMP-Pxxx Series, HLMP-Qxxx Series, HLMP-6xxx Series, HLMP-70xx Series Subminiature LED Lamps

Description

Flat Top Package

The Broadcom® HLMP-Pxxx Series flat top lamps use an untinted, nondiffused, truncated lens to provide a wide radiation pattern that is necessary for use in backlighting applications. The flat top lamps are also ideal for use as emitters in light pipe applications.

Dome Packages

The Broadcom HLMP-6xxx Series dome lamps for use as indicators use a tinted, diffused lens to provide a wide viewing angle with a high on-off contrast ratio. High brightness lamps use an untinted, nondiffused lens to provide a high luminous intensity within a narrow radiation pattern.

Resistor Lamps

The Broadcom HLMP-6xxx Series 5 volt subminiature lamps with built-in current limiting resistors are for use in applications where space is at a premium.

Lead Configurations

All of these devices are made by encapsulating LED chips on axial lead frames to form molded epoxy subminiature lamp packages. A variety of package configuration options is available. These include special surface mount lead configurations, gull wing, yoke lead, or Z-bend. Right angle lead bends at 2.54 mm (0.100 inch) and 5.08mm (0.200 inch) center spacing are available for through hole mounting. For more information, refer to the Standard SMT and Through Hole Lead Bend Options for Subminiature LED Lamps data sheet.

Features

- Subminiature flat top package
 - Ideal for backlighting and light piping applications
- Subminiature dome package
 - Diffused dome for wide viewing angle
 - Nondiffused dome for high brightness
- TTL and LSTTL compatible 5V resistor lamps
- Available in six colors
- Ideal for space limited applications
- Axial leads
- Available with lead configurations for surface mount and through hole PCB mounting

Package Dimensions

A. Flat Top Lamps

B. Diffused and Nondiffused

Notes:

All dimensions are in millimeters (inches).

Protruding support tab is connected to cathode lead.

Lead polarity for ALGaAs lamps is opposite to the lead polarity of subminiature lamps using other technologies.

- See [Figure 6](#) for current derating vs. ambient temperature. Derating is not applicable to resistor lamps.
- Refer to [Figure 7](#) showing Maximum Tolerable Peak Current vs. Pulse Duration to establish pulsed operating conditions.
- The transient peak current is the maximum nonrecurring peak current the device can withstand without failure. Do not operate these lamps at this high current.
