

# Safety Door Switch with Solenoid Interlock

SG-B1 SERIES

Ultra-slim

Safety Door Switch

SG-A1 SERIES

Safety Door Switch with Solenoid Interlock / Safety Door Switch Ultra-slim

# SG-B1 SERIES / SG-A1 SERIES

### Ultra-slim safety door switch

Introducing a safety door switch with solenoid interlock that is among the world's thinnest class\*! With 5 built-in contacts

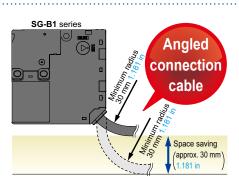

\*Based on research conducted by our company as of September 2023.

Manual lock release can be operated from three directions.

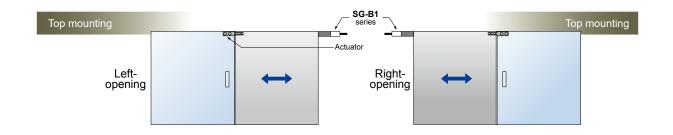

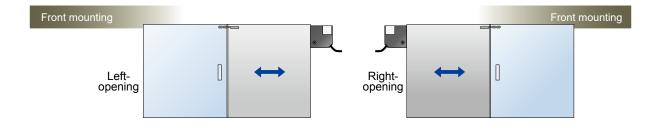

## Space saving design with angled connection cable

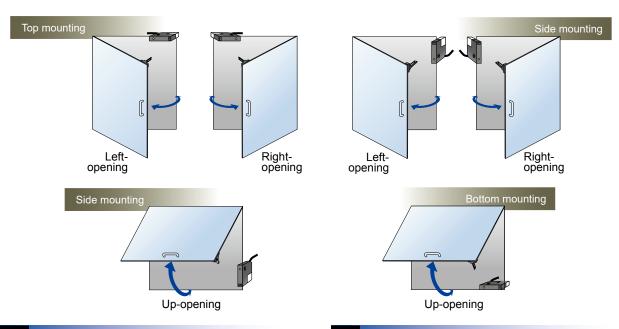

#### Can be installed on any door.

### Sliding doors

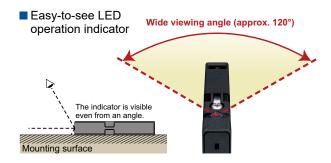

#### Hinged doors

#### SG-B1 series

- Choose between two types of locks:
  - Spring lock
  - Magnet lock

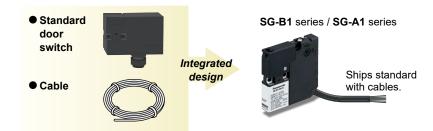

#### SG-A1 series

- Features three built-in contacts yet is among world's smallest designs.
- Choose from two actuator entry slot orientations.

#### All models come with cables pre-installed.

The **SG-B1** series and **SG-A1** series ship with bundled cables already connected internally. Since there is no need to provide cables separately, and because they are already connected internally, the number of wiring man-hours is cut in half.

#### **Energy-saving design**

The **SG-B1** series features an energy-saving design requiring current consumption of just 110 mA at 24 V DC (100 mA for the solenoid and 10 mA for the indicator), even though it also incorporates a solenoid interlock.

Low power consumption of 110 mA

#### ORDER GUIDE

#### Safety door switch with solenoid interlock

Actuators are not included with door switches and must be purchased separately.

Туре	Interlock force	Main contacts	Door monitor contacts	Lock monitor contacts	Cable length	Model No.

ONIC	1 m 3.281 ft	SG-A1-03-1
3NC	5 m 16.404 ft	SG-A1-03-5

#### **Actuators**

Actuators are not included with door switches and must be purchased separately.

Туре	Model No.
Straight actuator	SG-K11
Right-angle actuator	<b>SG-K12</b> (Note 1)
Right-angle actuator (with plate)	SG-K12A
Horizontal / vertical angle	SG-K13
Horizontal / vertical angle adjustable actuators (Note 2)	SG-K14

Notes: 1) The right-angle SG-K12 actuator's tensile strength is 100 N. Using the device with a load in excess of this value may cause it to fall off the door. If you anticipate that the tensile load during use will exceed 100 N, use the right-angle (with plate) SG-K12A.

Choose a model after verifying the required direction of operation based on the relationship between the door and safety switch.

• SG-K12

• SG-K14

Notes: 1) Basic insulation of 2.5 kV, 1.5 kV impulse withstand voltage is ensured between different contact circuits and between contact circuits and LED or solenoid in the enclosure. When both SELV (safety extra low voltage) or PELV (protective extra low voltage) circuits and other circuits (such as 230 V AC circuits) are used for the solenoid power and contact circuits at the same time, the SELV or PELV requirements are not met any more.

2) The actuator locking strength is rated at 500 N of static load. Do not apply a load higher than the rated value.

2) The actuator locking strength is rated at 500 N of static load. Do not apply a load higher than the rated value.
Do not apply a load higher than the rated value.
When a higher load is expected to work on the actuator, provide an additional system consisting of another safety switch without lock (such as the SG-A1 safety switch) or a sensor to detect door opening and stop the machine.

#### PRECAUTIONS FOR PROPER USE

- This catalog is a guide to select a suitable product.
   Be sure to read the instruction manual attached to the product prior to its use.
  - In order to avoid electric shock or fire, turn the power off before installation, removal, wire connection, maintenance, or inspection of the safety switch.
  - If relays are used in the circuit between the safety switch and the load, consider the danger and use safety relays, since welding or sticking contacts of standard relays may invalidate the functions of the safety switch.
  - Do not place a PLC in the circuit between the safety switch and the load. Safety and security can be endangered in the event of a malfunction of the PLC.

- Do not disassemble or modify the safety switch, otherwise a breakdown or an accident may occur.
- Do not install the actuator in a location where the human body may come in contact. Otherwise injury may occur
- Magnet lock type is locked when energized, and unlocked when de-energized. When energization is interrupted due to wire disconnection or other failures, the safety switch may be unlocked causing possible danger to the operators. Magnet lock type must not be used in applications where locking is strictly required for safety. Perform a risk assessment and determine whether solenoid lock type is appropriate.

#### Both series

- Regardless of door types, do not use the safety switch as a door stop. Install a mechanical door stop at the end of the door to protect the safety switch against excessive force.
- Do not apply external force on the actuator while unlocking, otherwise the actuator may not be unlocked.
- Do not apply excessive shock to the safety switch when opening or closing the door. A shock to the safety switch exceeding 1,000 m/s<sup>2</sup> may cause damage to the safety switch.
- If the operating atmosphere is contaminated, use a protective cover to prevent the entry of foreign objects into the safety switch through the actuator entry slots. Entry of a considerable amount of foreign objects into the safety switch may affect the mechanism of the safety switch and cause a malfunction.
- Do not store the safety switches in a dusty, humid, or organic-gas atmosphere, or in an area subjected to direct sunlight.
- Use proprietary actuators only. When other actuators are used, the safety switch may be damaged.

#### SG-B1 series

- The locking strength is rated at 500 N. Do not apply a load higher than the rated value. When a higher load is expected, provide an additional system consisting of another safety switch without lock (such as the SG-A1 safety switch) or a sensor to detect door opening and stop the machine.
- Regardless of door types, do not use the safety switch as a door lock. Install a separate lock using a latch or other measures.
- While the solenoid is energized, the switch temperature rises approximately 35 °C 95 °F above the ambient temperature (to approximately 85 °C 185 °F while the ambient temperature is 50 °C 122 °F). Do not touch to prevent burns. If cables come into contact with the switch, use heat-resistant cables.
- Bouncing will occur on the lock monitor contact during locking and unlocking (reference value: 20 ms).

 Although the SG-K11 / SG-K12 / SG-K12A actuators alleviate shock when the actuator enters a slot in the safety switch, make sure that excessive shock is not applied. If the rubber bushings become deformed or cracked, replace with new ones.

#### SG-A1 series

 Cover the unused actuator entry slot using the slot plug supplied with the safety switch.

#### Minimum radius of hinged door

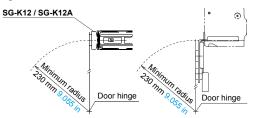

When using the safety switch on hinged doors, refer to the minimum radius of doors shown below. When using on doors with small minimum radius, use the angle adjustable actuator (SG-K13 / SG-K14).

Note: The values indicated in the figures below assume that there is no mechanical interference between the actuator and the safety switch when the door is opened or closed. Because deviation or dislocation of hinged doors may occur in actual applications, make sure of the correct operation before installation.

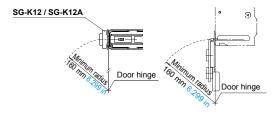

#### When using the right-angle actuator (SG-K12 / SG-K12A)

#### SG-B1 series

<When the door hinge is on the extension line of the actuator mounting surface>

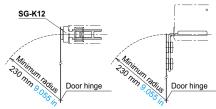

<When the door hinge is on the extension line of the safety switch surface>

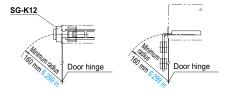

#### SG-A1 series

<When the door hinge is on the extension line of the actuator mounting surface>

<When the door hinge is on the extension line of the safety switch surface>

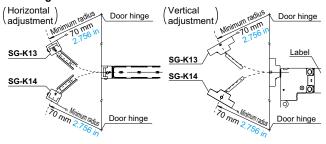

#### PRECAUTIONS FOR PROPER USE

### When using the (SG-K13 / SG-K14) angle adjustable (vertical / horizontal) actuator

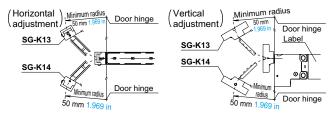

- When the door hinge is on the extension line of the actuator mounting surface: 70 mm 2.756 in
- When the door hinge is on the extension line of the safety switch surface: 50 mm 1.969 in

#### SG-B1 series

### <When the door hinge is on the extension line of the actuator mounting surface>

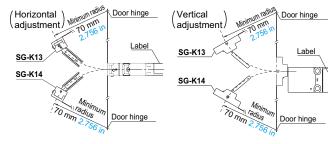

#### <When the door hinge is on the extension line of the safety switch surface>

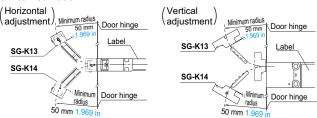

#### SG-A1 series

### <When the door hinge is on the extension line of the actuator mounting surface>

### <When the door hinge is on the extension line of the safety switch surface>

#### Actuator angle adjustment (vertical / horizontal)

- Using the angle adjustment screw (M3 hexagon-socket-head screw), the actuator angle can be adjusted.
   Adjustable angle: 0 to 20°
- The larger the adjusted angle of the actuator, the smaller the applicable radius of the door opening. After installing the actuator, open the door. Then adjust the actuator so that its edge can be inserted properly into the actuator entry slot of the safety switch.
- After adjusting the actuator angle, apply Loctite to the adjustment screw so that the screw will not move.

#### **Mounting**

 Mount the safety switch on a fixed piece of machinery or guard and the actuator on a hinged door. Avoid mounting both the safety switch and actuator on a hinged door. Doing so may cause equipment failure. For more information about how to mount the devices, see the following diagram:

Note: When mounting the actuator, make sure that the actuator \( \subseteq \) enters the slot in the correct direction, as shown on the right figure.

#### Recommended tightening torque for mounting screws

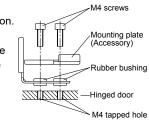

Safety switch: 1.0 to 1.5 N·m (Three M4 screws)\*

Actuator: 1.0 to 1.5 N·m (Two M4 screws)\*

- \*The above recommended tightening torques of the mounting screws are the values confirmed with hexagon-socket-head bolts. When other screws are used and tightened to a smaller torque, make sure that the screws do not become loose after mounting.
- · Mounting bolts must be provided by the users.
- To avoid unauthorized or unintended removal of the safety switch and the actuator, it is recommended that the safety switch and actuator are installed in a secure manner, for example using special screws or welding the screws.
- When installing the SG-K12A actuator, use the mounting plate (supplied with the actuator) on the hinged door, and mount tightly using two M4 screws.

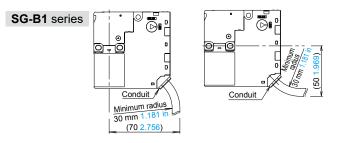

The mounting plate has orientation. Do not lose the mounting plate.

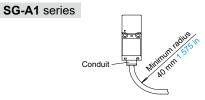

Adequate performance cannot be obtained without the plate as the actuator may fall off the door.

#### Cables

- Do not fasten or loosen the gland at the bottom of the safety switch.
- When bending the cable during wiring, make sure that the cable radius is kept at 30 mm 1.181 in minimum.
- When wiring, make sure that water or oil does not enter the cable.
- The solenoid has polarity. Make sure of the correct polarity when wiring.

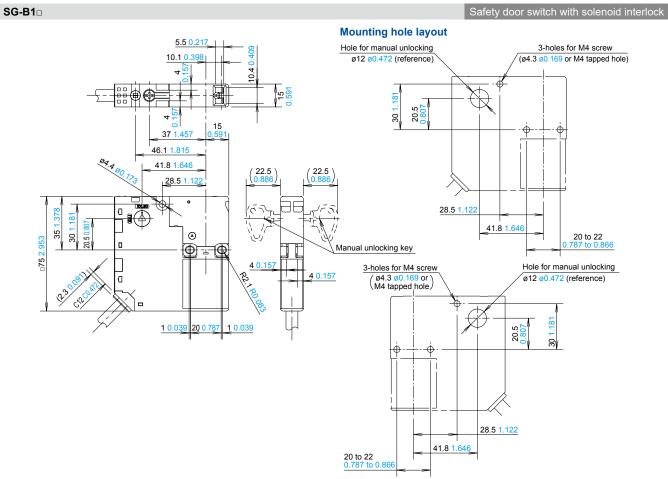

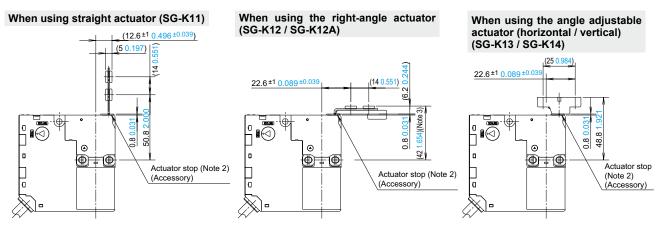

(Unit: mm in)

#### DIMENSIONS (Unit: mm in)

The CAD data in the dimensions can be downloaded from our website.

Note 1: Drill mounting holes so that they are properly aligned for the orientation in which the safety switch will be used.

Notes: 2) The actuator stop is used to adjust the actuator position. Remove the actuator stop after the actuator position is mounted. 3) 41.4 1.63 when using **SG-K12** 

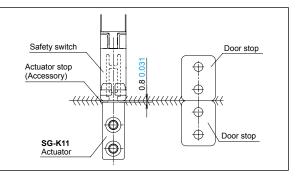

\* The tensile strength of the SG-K12 actuator is 100N. If an excessive tensile force is applied, the actuator may fall off the door. When a tensile force exceeding 100N is expected, use the SG-K12A actuator with a plate.

#### Actuator mounting reference position

As shown in the figure on the right, the mounting reference position of the actuator when inserted in the safety switch is:

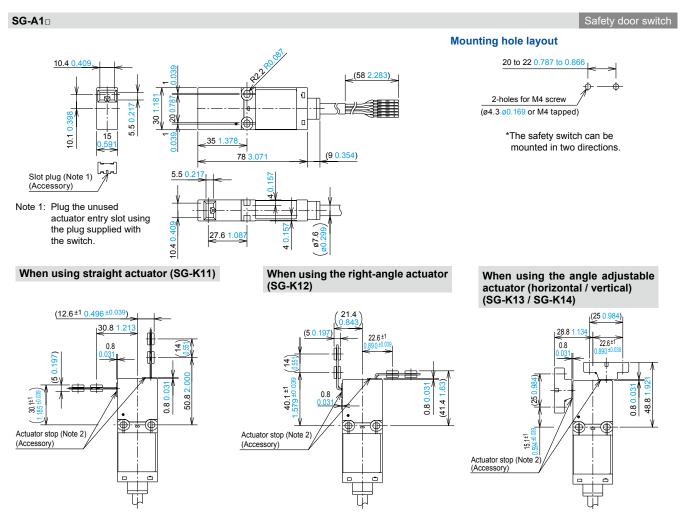

The actuator stop on the actuator lightly touches the safety switch.

\* The actuator stop is used to adjust the actuator position. Remove the actuator stop after the actuator position is mounted.

#### DIMENSIONS (Unit: mm in)

The CAD data in the dimensions can be downloaded from our website.

Note 2: The actuator stop is used to adjust the actuator position. Remove the actuator stop after the actuator position is mounted.

SG-K11 / SG-K12 Actuator

Actuator stop (Note)

#### Straight actuator (SG-K11) Right-angle actuator (SG-K12) \* The tensile strength of the SG-K12 actuator is 100N. If an excessive tensile force is applied, the actuator 43.2 1.701 may fall off the door. (15.8 0.622) When a tensile force exceeding 100N is expected, use the SG-K12A actuator with a plate. When mounted (33.8 1.331) 4 When mounted (5.6 0.220) 0.8 0.031 When mounted (5 0.197) 2-ø9 ø0.3 Actuator stop (Note) Rubber bushing (Accessory) Rubber bushing

Note: The actuator stop is used to adjust the actuator position. Remove the actuator stop after the actuator position is mounted.

#### Actuator mounting hole layout (Straight actuator, right-angle actuator)

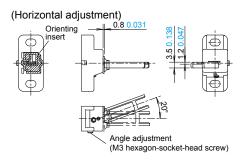

#### DIMENSIONS (Unit: mm in)

The CAD data in the dimensions can be downloaded from our website.

SG-K13 / SG-K14 Actuato

### Horizontal / vertical angle adjustable actuators (SG-K13)

0.512 28.2 1.110

7.5 0.295

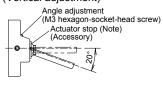

### Horizontal / vertical angle adjustable actuators (**SG-K14**)

\* The SG-K14 differs from the SG-K13 in that the direction in which the metal parts on the tip of the actuator are embedded is reversed by 180°.

#### (Horizontal adjustment)

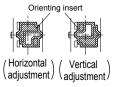

#### (Vertical adjustment)

# Changes in the orientation of adjustment for angle adjustable (horizontal / vertical) actuators

The orientation of actuator adjustment (horizontal / vertical) can be changed using the orienting insert (white plastic) installed on the back of the actuator. Do not lose the mounting plate.

\* The base is made of glass-reinforced PA66 (66 nylon). Angle adjustment screws are stainless steel (SUS).

When using adhesive on screws, take material compatibility into consideration.

#### Actuator mounting hole layout (horizontal / vertical angle adjustable actuators)

Note: The actuator stop is used to adjust the actuator position. Remove the actuator stop after the actuator position is mounted.

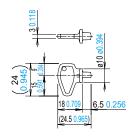

**Vertical**
