

Inductors for power circuits

Thin-film metal magnetic material

TFM-BLD series

TFM160808BLD type

FEATURES

- By using metal magnetic material with high Saturation magnetic flux density the excellent DC bias characteristics needed for inductors for power circuits can be achieved.
- With the same product shape and terminal structure as general chip parts it has excellent mounting stability characteristics and can also be mounted to general-purpose land patterns.
- By using a closed magnetic circuit structure leakage flux is minimized.

APPLICATION

- Smart phones, tablet terminals, HDDs, SSDs, DVCs, DSCs, mobile display panels, portable game devices, compact power supply modules, other

PART NUMBER CONSTRUCTION

TFM	160808	BLD	-	R24	M	T	CA
Series name	L×W×H dimensions 1.6×0.8×0.8 mm	Characteristic type		Inductance (μH)	Inductance tolerance	Packaging style	Internal code

CHARACTERISTICS SPECIFICATION TABLE

L		L Measuring frequency	DC resistance		Rated current*			Part No.	
(μH)	Tolerance	(MHz)	(mΩ)max.	(mΩ)typ.	Isat (A)max.	(A)typ.	Itemp (A)max.	(A)typ.	
0.24	±20%	1.0	33	28	3.0	3.4	3.5	3.9	TFM160808BLD-R24MTCA

* Rated current: smaller value of either Isat or Itemp.

Isat: When based on the inductance change rate (30% below the initial L value)

Itemp: When based on the temperature increase (temperature increase of 40 °C by self heating)

Measurement equipment

Measurement item	Product No.	Manufacturer
L	4294A	Keysight Technologies
DC resistance	AX-114N	ADEX
Rated current Isat	4284A+42841A+42842C	Keysight Technologies

* Equivalent measurement equipment may be used.

TEMPERATURE RANGE, INDIVIDUAL WEIGHT

Operating temperature range *	Storage temperature range **	Individual weight
-40 to +125 °C	-40 to +125 °C	0.0070 g

* Operating temperature range includes self-temperature rise.

** The storage temperature range is for after the assembly.

The graph illustrates the temperature profile for a soldering process. The y-axis represents Temperature and the x-axis represents Time. The process is divided into three main stages:

- Preheating:** The temperature rises from 150°C to 180°C. This stage is shaded light blue and has a duration of 60 to 120s.
- Soldering:** The temperature rises from 180°C to a peak of 250 to 260°C. This stage is shaded light blue and has a duration of 30 to 50s. The peak temperature is maintained for a maximum of 10s.
- Natural cooling:** The temperature falls from the peak to 230°C. This stage is shaded light blue.

Key temperature points and durations are marked on the graph:

- 150°C: Starting temperature.
- 180°C: Temperature at the end of the preheating stage.
- 230°C: Temperature at the end of the soldering stage and the start of the natural cooling stage.
- 250 to 260°C: Peak temperature during the soldering stage.
- 60 to 120s: Duration of the preheating stage.
- 30 to 50s: Duration of the soldering stage.
- 10s max.: Maximum time at the peak temperature.

□ PACKAGE QUANTITY

Package quantity	3000 pcs/reel

REMINDERS FOR USING THESE PRODUCTS

Before using these products, be sure to request the delivery specifications.

SAFETY REMINDERS

Please pay sufficient attention to the warnings for safe designing when using this products

REMINDERS

- The storage period is within 6 months. Be sure to follow the storage conditions (temperature: 5 to 40°C, humidity: 20 to 75% RH or less).
If the storage period elapses, the soldering of the terminal electrodes may deteriorate.
- Do not use or store in locations where there are conditions such as gas corrosion (salt, acid, alkali, etc.).
- Soldering corrections after mounting should be within the range of the conditions determined in the specifications.
If overheated, a short circuit, performance deterioration, or lifespan shortening may occur.
- When embedding a printed circuit board where a chip is mounted to a set, be sure that residual stress is not given to the chip due to the overall distortion of the printed circuit board and partial distortion such as at screw tightening portions.
- Self heating (temperature increase) occurs when the power is turned ON, so the tolerance should be sufficient for the set thermal design.
- Carefully lay out the coil for the circuit board design of the non-magnetic shield type.
A malfunction may occur due to magnetic interference.
- Use a wrist band to discharge static electricity in your body through the grounding wire.
- Do not expose the products to magnets or magnetic fields.
- Do not use for a purpose outside of the contents regulated in the delivery specifications.
- The products listed on this catalog are intended for use in general electronic equipment (AV equipment, telecommunications equipment, home appliances, amusement equipment, computer equipment, personal equipment, office equipment, measurement equipment, industrial robots) under a normal operation and use condition.
The products are not designed or warranted to meet the requirements of the applications listed below, whose performance and/or quality require a more stringent level of safety or reliability, or whose failure, malfunction or trouble could cause serious damage to society, person or property.
If you intend to use the products in the applications listed below or if you have special requirements exceeding the range or conditions set forth in the each catalog, please contact us.
