- 0342 receptacle uses Mill-Max's new #42 Power Contact. This receptacle will accept the $\varnothing.061 \pm .002$ power pins of 1/4 brick DC/DC converters.
- #42 contact has a very low resistance path and is rated for currents up to 50A.
- #42 contact can be ordered in standard receptacles that use #03 contact; or it can be specified as the spring element inside custom made receptacles for power connector applications.

Mechanical Data #42 Contact:

Insertion/Extraction Force with a $\varnothing.061$ (nominal) pin:

First Cycle		2nd & Subsequent Cycles	
Insertion Force	Extraction Force	Insertion Force	Extraction Force
20N	6N	10N	6N

Compliance Test (the "spring back" characteristic of the contact to accept a $\varnothing.059$ small pin after insertion of a $\varnothing.063$ large pin):

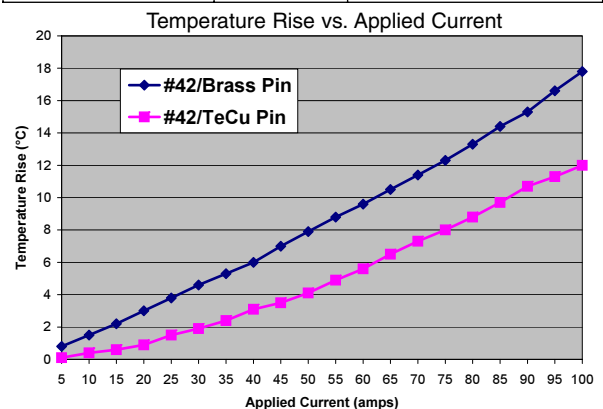

Initial Cycle with $\varnothing.059$ pin		Second Cycle with $\varnothing.063$ pin		Third Cycle with $\varnothing.059$ pin	
Ins. Force	Ext. Force	Ins. Force	Ext. Force	Ins. Force	Ext. Force
18N	6N	22N	7N	3N	2N

(Insertion/Extraction Forces are in Newtons and measured with polished steel gage pins having elliptical shaped tips)

Electrical/Thermal Data #42 Contact:

The electrical conductivity (resistance) of #42 contact depends on the conductivity of the mating pin. Tests were made with both $\varnothing.060$ Brass (26% IACS) and Tellurium Copper (93% IACS) pins. Temperature rise was measured with the receptacles mounted to simulate the heatsinking of a multilayer circuitboard.

Contact/Pin combination	Resistance	Insertion Loss per pin @ 50A
#42/ Brass	.322m Ω	.805W
#42/TeCu	.213m Ω	.533W
