

EV2349-G-00A

24V, 6.5A, Low I_Q

Step-Down Converter Evaluation Board

DESCRIPTION

The EV2349-G-00A is an evaluation board for MP2349, a fully integrated high frequency synchronous rectified step-down switch mode converter. It offers super compact solution to achieve 6.5A continuous output current and 7.5A peak output current over a wide input supply range.

The MP2349 operates at high efficiency over a wide output current load range based on MPS proprietary switching loss reduction tech and internal Low Ron Power MOSFETs. Adaptive Constant-On-Time (COT) control mode provides fast transient response and eases loop stabilization. The DC auto tune loop combined with the remote differential sense provides good load and line regulation.

Full protection features include OCP, OVP, UVP and thermal shut down.

The converter requires minimum number of external components and is available in QFN-11 (2mmx2mm) package.

ELECTRICAL SPECIFICATION (1)

Parameter	Symbol	Value	Units
Input Voltage	V _{IN}	8 to 24	V
Output Voltage	V _{OUT}	3.3	V
Continuous Output Current	I _{OUT}	6.5	A
Peak Output Current	I _{OUT}	7.5	A

Notes:

- 1) For different Input/output voltage specs and different output capacitor/inductor may need change the application circuit parameters.

FEATURES

- Wide 4.5V to 24V Operating Input Range
- 105μA low quiescent Current
- 6.5A Continuous Output Current
- 7.5A Peak Output Current
- Adaptive COT for Fast transient
- DC Auto Tune Loop and Remote Differential sense
- Low R_{DS(ON)} Internal Power MOSFETs
- Proprietary Switching Loss Reduction Technique
- Forced PWM, Auto PFM/PWM and Ultra-sonic Mode Selectable
- Fixed 700kHz Switching Frequency
- Stable with POSCAP and Ceramic Cap
- Internal Soft Start
- Output Discharge
- OCP, OVP, UVP and Thermal Shutdown with Auto Retry
- QFN-11(2mm x 2mm) Package

APPLICATIONS

- Security Cameras
- Portable Device, XDSL Device
- Digital Set-Top Boxes
- Flat-Panel Television and Monitors
- General Purposes

All MPS parts are lead-free, halogen free, and adhere to the RoHS directive. For MPS green status, please visit MPS website under Quality Assurance.

"MPS" and "The Future of Analog IC Technology" are Registered Trademarks of Monolithic Power Systems, Inc.

Efficiency

V_{OUT}=3.3V, L=2.2μH, DCR=12mΩ, PFM WITHOUT USM

EVALUATION BOARD SCHEMATIC (2)

Notes:

- EN resistor divider sets the VIN rising threshold to 7.5V. For 5V input application, change R7 to 200K.

QUICK START GUIDE

1. Preset the input power supply output between 8V and 24V.
2. Turn off the input power supply.
3. Connect the positive and negative terminals of the load to the VOUT and GND pins, respectively.
4. Connect the positive and negative terminals of the input power supply output to the VIN and GND pins, respectively.
5. Turn input power supply on after making connections. The board will automatically start up.
6. To use the Enable function, apply a digital input to the EN pin. Drive EN higher than 1.4V to turn on the regulator, or less than 0.4V to turn it off. Do not make the EN voltage over 4.5V.
