
SAM G55 Curiosity Audio Board User's Guide

Introduction

The Microchip Technology SAM G55 Curiosity Audio Board (EV78Y10A) includes an integrated programmer and debugger (EDBG), therefore additional hardware is not required to get started. Users can expand functionality through the MikroElektronika mikroBUS™ Click™ adapter boards, add Wi-Fi® connectivity capability using the Microchip expansions boards, and add audio input and output capability with Microchip audio daughter boards.

With or without expansion boards, the SAM G55 Curiosity Audio Board provides the freedom to develop a variety of applications, including audio, Internet of Things (IoT), and proof-of-concept designs.

SAM G55 Curiosity Audio Board Features

The SAM G55 Curiosity Audio Board has the following features:

- Microchip ATSAMG55J19 microcontroller
- Embedded debugger (EDBG):
 - USB interface
 - Programming and debugging (target) through Serial Wire Debug (SWD)
 - Virtual COM-port interface to target through UART
 - Data Gateway Interface (DGI) to target through USART or TWI
 - Four GPIOs connected to the target for code instrumentation
 - Target USB connection with Host and Device support
- Digital I/O:
 - Three mechanical buttons (including one reset button)
 - Two user LEDs
 - One Xplained pro extension compatible interface
- One X32 interface supporting audio and Bluetooth® BLE
- One mikroBUS interface
- Three possible power sources:
 - External power
 - Embedded debugger USB
 - Target USB
- 32 kHz crystal and 12 MHz crystal

Kit Contents

The kit contains one SAM G55 Curiosity Audio Board (EV78Y10A).

Note: If any part is missing from the kit, contact a Microchip sales office for assistance. A list of Microchip offices for sales and service is provided on the last page of this document.

The SAM G55 Curiosity Audio Board (EV78Y10A) is shown in the following figure:

1. Development Board Functionality and Features

1.1 SAM G55 Curiosity Audio Board Feature Location

Figure 1-1. SAM G55 Curiosity Audio Board Layout (Top View)

1.2 Embedded Debugger

The SAM G55 Curiosity Audio Board contains the Embedded Debugger (EDBG) for on-board debugging. The EDBG is a composite USB device of three interfaces; a debugger, Virtual COM Port, and a Data Gateway Interface (DGI).

Together with MPLAB® X IDE, the EDBG debugger interface can program and debug the ATSAMG55J19. On SAM G55 Curiosity Audio Board, the SWD interface is connected between the EDBG and the ATSAMG55J19.

The Virtual COM Port is connected to a UART on the ATSAMG55J19 and provides an easy way to communicate with the target application through terminal software. It offers variable baud rate, parity, and stop bit settings.

Note: The settings on the ATSAMG55J19 must match the settings given in the terminal software.

Info: The virtual COM port in the EDBG requires the terminal software to set the data terminal ready (DTR) signal to enable the UART pins connected to the ATSAMG55J19. If the DTR signal is not enabled, the UART pins on the EDBG is kept in high-z (tristate) rendering the virtual COM port unusable. The DTR signal is set automatically by some terminal software, but it may have to be manually enabled in the terminal.

The DGI consists of several physical interfaces for communication with the Host computer. Communication over the interfaces is bidirectional. It can be used to send events and values from the ATSAMG55J19 or as a generic printf-style data channel. Traffic over the interfaces can be timestamped on the EDBG for more accurate tracing of events. Note that timestamping imposes an overhead that reduces maximal throughput. The Data Visualizer is used to send and receive data through DGI.

The EDBG controls two LEDs on the SAM G55 Curiosity Audio Board; a power LED, and a status LED. The following table shows how the LEDs are controlled in different operation modes.

Table 1-1. EDBG LED Control

Operation mode	Power LED	Status LED
Normal operation	Power LED is lit when power is applied to the board.	Activity indicator, LED flashes when any communication happens to the EDBG.
Bootloader mode (idle)	The power LED and the status LED blinks simultaneously.	
Bootloader mode (firmware upgrade)	The power LED and the status LED blinks in an alternating pattern.	

1.3 Power Sources

The SAM G55 Curiosity Audio Board kit can be powered by several power sources as listed in the following table.

Table 1-2. Power Sources for the SAM G55 Curiosity Audio Board

Power Input	Voltage Requirements	Current Requirements	Connector Marking
External power	5V $\pm$ 2% ($\pm$ 100mV) for USB Host Operation 4.3V to 5.5V if USB host operation is not required.	Recommended minimum is 1A to be able to provide enough current for connected USB devices and the board itself. Recommended maximum is 2A due to the input protection maximum current specification.	PWR
Embedded debugger USB	4.4V to 5.25V (according to USB spec.)	500mA (according to USB spec.)	DEBUG USB
Target USB	4.4V to 5.25V (according to USB spec.)	500mA (according to USB spec.)	TARGET USB

The kit will automatically detect which power sources are available and choose which one to use according to the following priority:

1. External power.
2. Embedded Debugger USB.
3. Target USB.

Info: External power is required when 500mA from a USB connector is not enough to power the board with possible extension boards. A connected USB device in a USB host application might easily exceed this limit.

1.4 X32 Audio Interface

The X32 audio interface is a 32-pin interface to the board which supports audio codec, DACs, and Bluetooth® radios. The X32 audio interface has audio supply I²S, other control lines, and data interfaces.

1.4.1 Pinout

The following table shows the pinout and description for the X32 Audio interface. Refer to the [Schematics](#) for additional information.

Table 1-3. X32 Audio Interface Pinout

Pin Number	Name	Description	Interface
1	GND	Ground	Power
2	GND	Ground	Power
3	UART RX	UART RX, receive to MCU from DB	UART
4	UART CTS	UART Clear to send	UART
5	UART TX	UART TX, transmit from MCU to DB	UART
6	UART RTS	UART Ready to send	UART
7	I ² C SCL	Clock line for I ² C interface.	I ² C
8	STBY/RST	Standby/Reset control	GPIO
9	I ² C SDA	Data line for I ² C interface.	I ² C
10	Audio WS/LRCLK	Audio Word Select/Left Right Clock	I ² S
11	Audio In	Audio into MCU, out from codec	I ² S
12	Audio CLK	Audio clock	I ² S
13	Audio out	Audio out of MCU, into codec/DAC	I ² S
14	REFCLK/MCLK	Reference/Master clock	MCLK
15	GND	Ground	Power
16	GND	Ground	Power
17	NC	Legacy hold over	-
18	+3.3v	VDD	Power
19	NC	Legacy hold over	-
20	+5.0v	VDD	Power
21 (1)	Audio WS/ Audio LRCLK	Audio Word Select/Left Right Clock	I ² S
22 (2)	Card ID pin	Communication line to the daughter card and EDBG	Connected to EDBG
23 (3)	Audio CLK	Audio Clock	I ² S
24 (4)	NC	-	-
25 (5)	Audio IN	Audio into MCU, out from codec	I ² S
26 (6)	NC	-	-
27 (7)	Audio OUT	Audio out of MCU, into codec/DAC	I ² S
28 (8)	NC	-	-
29 (9)	REFCLK2/MCK2	Reference clock #2	REFCLK
30 (10)	NC	-	-
31 (11)	GND	Ground	Power

.....continued			
Pin Number	Name	Description	Interface
32 (12)	GND	Ground	Power

1.4.2 Port Connections

The following table provides port connections to the X32 audio interface.

Table 1-4. Port Connections

Interface	MCU Pin for X32
UART RX	PA09
UART TX	PA10
UART RTS	PA26
UART CTS	PA25
I ² C SDA	PB10
I ² C SCL	PB11
Reset	PA30
REFCLK	PA18 or PA04 ⁽¹⁾
I ² S Clock	PA00
I ² S Audio Out (MOSI)	PA03
I ² S Audio In (MISO)	PA02
I ² S LRCLK	PA01

Note:

1. PA18 or PA04 is selected through an MCLK jumper. For additional information, refer to the [Board Feature Location](#), and [MCLK Select Jumper](#).

1.5 mikroBUS

The mikroBUS interface enables using additional Click boards. For additional information, and to see the boards which can be used with this development board, refer to <https://www.mikroe.com/>.

Table 1-5. mikroBUS™ Pinout

Pin Number	Name	Function
1	GND	Ground
2	+5V	+5.0V
3	SDA	I ² C SDA
4	SCL	I ² C SCL
5	TX	UART TX
6	RX	UART RX
7	INT	Interrupt request line
8	PWM	Pulse-Width Modulation
9	GND	Ground

.....continued		
Pin Number	Name	Function
10	+3.3V	Ground
11	MOSI	Host Out Client In line of Serial Peripheral Interface (SPI)
12	MISO	Host In Client Out line of SPI
13	SCK	Clock for SPI
14	CS	Chip Select for SPI (Active low)
15	RST	Reset
16	ADC	Analog-to-Digital Converter

1.5.1 Port Connections

The mikroBUS interface shares signals with the X32 audio interface, refer to the previous table for additional information on pinout or signal probing.

Table 1-6. Port Connections for the mikroBUS Interface

Interface	Port Pin for mikroBUS™
UART RX	PA09
UART TX	PA10
INT/IRQ	PB03
I ² C SDA	PB10
I ² C SCL	PB11
Reset	PA30
PWM	PA23
SPI Clock	PA14
SPI MOSI	PA13
SPI MISO	PA12
SPI SS	PA05
ADC	PA19

1.6 Xplained Pro Extension Standard Header

The SAM G55 Curiosity Audio Board has an Xplained Pro extension compatible interface that enables using existing extension boards. This interface consists of a dual row, 20-pin, 100 mil, 90 degree extension male header. Xplained Pro extensions have their female counterparts. The extension headers can be used to connect a variety of Xplained Pro extension boards, or to access the pins of the target MCU directly. All connected pins follow the defined pinout description as shown in the following table.

Note: All pins are not always connected.

Table 1-7. Interface Pinout

Pin number	Name	Description	Port
1	ID	Communication line to the ID chip on an extension board.	Connected to EDBG
2	GND	Ground.	-

.....continued

Pin number	Name	Description	Port
3	ADC(+)	Analog-to-Digital Converter (ADC), alternatively positive part of differential ADC.	PA17
4	ADC(-)	ADC, alternatively negative part of differential ADC.	PA18
5	GPIO1	General purpose I/O.	PA26
6	GPIO2	General purpose I/O.	PA25
7	PWM(+)	Pulse-Width Modulation (PWM), alternatively positive part of differential PWM.	PA00
8	PWM(-)	PWM, alternatively negative part of differential PWM.	PA23
9	IRQ/INT/GPIO	Interrupt request line and general purpose I/O.	PA24
10	SPI SS B/GPIO	SPI Client Select or General purpose I/O.	PA29
11	I ² C SDA	Data line for I ² C interface. Always implemented, bus type.	PB10
12	I ² C SCL	Clock line for I ² C interface. Always implemented, bus type.	PB11
13	UART RX	Receiver line of target device UART.	PA09
14	UART TX	Transmitter line of target device UART.	PA10
15	SPI SS A/GPIO	SPI Client Select or General purpose I/O.	PA11
16	SPI MOSI	Host Out Client In line of SPI. Always implemented, bus type.	PA13
17	SPI MISO	Host In Client Out line of SPI. Always implemented, bus type.	PA12
18	SPI SCK	Clock for SPI. Always implemented, bus type.	PA14
19	GND	Ground.	-
20	VCC	Power for extension boards (3.3V).	-

Figure 1-2. Pinout Schematic

1.7 Buttons and LEDs

The SAM G55 Curiosity Audio Board offers several user buttons and LEDs. The following table provides the function, description, and port on the MCU.

Table 1-8. Functions for Buttons and LEDs

Function	Description	Type	Port
SW1	User switch	Input	PB15
SW2	User switch	Input	PB14

.....continued

Function	Description	Type	Port
RESET	Hard reset of the G55	Input	-
LED1	User programmable LED, green	Input	PA06
LED2	User programmable LED, yellow	Input	PA15

1.8 USB

One USB is available on the SAM G55 Curiosity Audio Board that can act as Host and device. It has a micro USB connector with the silk screen TARGET USB.

Table 1-9. USB Connections

Pin on SAM G55	USB
PA22	DP
PA21	DM
PB02	USB ID

1.9 Strapping Options

The SAM G55 Curiosity Audio Board contains two jumpers that can be used to configure the functionality of the board. The jumpers can be located in the [Figure 1-1](#).

1.9.1 Chip Erase Jumper

When this jumper is placed on the CHIPERASE header, the SAM G55 performs a chip erase after the next power toggle of the board. For normal operation, this jumper must be placed such that only one of the pins of the CHIPERASE header is connected, and no contact is made between the two pins.

1.9.2 MCLK Select Jumper

The I²S interface (1.4) can use one of two sources for its MCLK signal, either PA18 (GCLK output) or PA04 (I²S interface).

4. Revision History

Revision A - 12/2021

This is the initial release of this document.

The Microchip Website

Microchip provides online support via our website at www.microchip.com/. This website is used to make files and information easily available to customers. Some of the content available includes:

- **Product Support** – Data sheets and errata, application notes and sample programs, design resources, user's guides and hardware support documents, latest software releases and archived software
- **General Technical Support** – Frequently Asked Questions (FAQs), technical support requests, online discussion groups, Microchip design partner program member listing
- **Business of Microchip** – Product selector and ordering guides, latest Microchip press releases, listing of seminars and events, listings of Microchip sales offices, distributors and factory representatives

Product Change Notification Service

Microchip's product change notification service helps keep customers current on Microchip products. Subscribers will receive email notification whenever there are changes, updates, revisions or errata related to a specified product family or development tool of interest.

To register, go to www.microchip.com/pcn and follow the registration instructions.

Customer Support

Users of Microchip products can receive assistance through several channels:

- Distributor or Representative
- Local Sales Office
- Embedded Solutions Engineer (ESE)
- Technical Support

Customers should contact their distributor, representative or ESE for support. Local sales offices are also available to help customers. A listing of sales offices and locations is included in this document.

Technical support is available through the website at: www.microchip.com/support

Microchip Devices Code Protection Feature

Note the following details of the code protection feature on Microchip products:

- Microchip products meet the specifications contained in their particular Microchip Data Sheet.
- Microchip believes that its family of products is secure when used in the intended manner, within operating specifications, and under normal conditions.
- Microchip values and aggressively protects its intellectual property rights. Attempts to breach the code protection features of Microchip product is strictly prohibited and may violate the Digital Millennium Copyright Act.
- Neither Microchip nor any other semiconductor manufacturer can guarantee the security of its code. Code protection does not mean that we are guaranteeing the product is "unbreakable". Code protection is constantly evolving. Microchip is committed to continuously improving the code protection features of our products.

The Microchip name and logo, the Microchip logo, Adaptec, AnyRate, AVR, AVR logo, AVR Freaks, BesTime, BitCloud, CryptoMemory, CryptoRF, dsPIC, flexPWR, HELDO, IGLOO, JukeBlox, KeeLoq, Kleer, LANCheck, LinkMD, maXStylus, maXTouch, MediaLB, megaAVR, Microsemi, Microsemi logo, MOST, MOST logo, MPLAB, OptoLyzer, PIC, picoPower, PICSTART, PIC32 logo, PolarFire, Prochip Designer, QTouch, SAM-BA, SenGenuity, SpyNIC, SST, SST Logo, SuperFlash, Symmetricom, SyncServer, Tachyon, TimeSource, tinyAVR, UNI/O, Vectron, and XMEGA are registered trademarks of Microchip Technology Incorporated in the U.S.A. and other countries.

AgileSwitch, APT, ClockWorks, The Embedded Control Solutions Company, EtherSynch, Flashtec, Hyper Speed Control, HyperLight Load, IntelliMOS, Libero, motorBench, mTouch, Powermite 3, Precision Edge, ProASIC, ProASIC Plus, ProASIC Plus logo, Quiet- Wire, SmartFusion, SyncWorld, Temux, TimeCesium, TimeHub, TimePictra, TimeProvider, TrueTime, WinPath, and ZL are registered trademarks of Microchip Technology Incorporated in the U.S.A.

Adjacent Key Suppression, AKS, Analog-for-the-Digital Age, Any Capacitor, AnyIn, AnyOut, Augmented Switching, BlueSky, BodyCom, CodeGuard, CryptoAuthentication, CryptoAutomotive, CryptoCompanion, CryptoController, dsPICDEM, dsPICDEM.net, Dynamic Average Matching, DAM, ECAN, Espresso T1S, EtherGREEN, GridTime, IdealBridge, In-Circuit Serial Programming, ICSP, INICnet, Intelligent Paralleling, Inter-Chip Connectivity, JitterBlocker, Knob-on-Display, maxCrypto, maxView, memBrain, Mindi, MiWi, MPASM, MPF, MPLAB Certified logo, MPLIB, MPLINK, MultiTRAK, NetDetach, NVM Express, NVMe, Omniscient Code Generation, PICDEM, PICDEM.net, PICkit, PICtail, PowerSmart, PureSilicon, QMatrix, REAL ICE, Ripple Blocker, RTAX, RTG4, SAM-ICE, Serial Quad I/O, simpleMAP, SimpliPHY, SmartBuffer, SmartHLS, SMART-I.S., storClad, SQL, SuperSwitcher, SuperSwitcher II, Switchtec, SynchroPHY, Total Endurance, TSHARC, USBCheck, VariSense, VectorBlox, VeriPHY, ViewSpan, WiperLock, XpressConnect, and ZENA are trademarks of Microchip Technology Incorporated in the U.S.A. and other countries.

SQTP is a service mark of Microchip Technology Incorporated in the U.S.A.

The Adaptec logo, Frequency on Demand, Silicon Storage Technology, Symmcom, and Trusted Time are registered trademarks of Microchip Technology Inc. in other countries.

GestIC is a registered trademark of Microchip Technology Germany II GmbH & Co. KG, a subsidiary of Microchip Technology Inc., in other countries.

All other trademarks mentioned herein are property of their respective companies.
