

1W, Fixed input voltage, 5000VAC or 6000VDC isolated & unregulated dual/single output

Continuous Short Circuit Protection

EN 60601-1

BS EN 60601-1

Patent Protection

RoHS

### FEATURES

- High efficiency up to 83%
- The leakage current < 2μA
- Isolation Capacitance as low as 4pF
- Creepage & Clearance Distance > 8mm
- Reinforced insulation, Isolation voltage: 5000VAC or 6000VDC
- Operating ambient temperature range: -40°C to +105°C
- Continuous short-circuit protection

G\_WS-1WR3 & H\_WS-1WR3 series meet reinforced insulation requirements. They are specially designed for applications where require compact size, high isolation, low isolation capacitor and low leakage current power. They are widely used in medical, electricity, IGBT driver and so on. They are suitable for:

1. Where the voltage of the input power supply is stable (voltage variation:  $\pm 10\%V_{in}$ );
2. Where isolation is necessary between input and output (isolation voltage  $\leq 5000VAC$  or  $6000VDC$ );
3. Where do not has high requirement of line regulation and the ripple & noise of the output voltage; Such as, medical collection isolation, high voltage collection circuit and IGBT drive circuit.

Design Reference

1. Typical application

If it is required to further reduce input and output ripple, a filter capacitor can be connected to the input and output terminals, see Fig.3. Moreover, choosing suitable filter capacitor is very important, start-up problems may be caused by too large capacitance. To ensure the modules running well, the recommended capacitive load values as shown in Table 1.

3. Minimum Output Load Requirement

For a reliable and efficient operation of the converter, the minimum load should never be less than 10% of the rated output load. If the total required output power is below 10%, a parallel bleeding resistor is required on the output, ensuring that the sum of the power consumption is always maintained at 10% minimum.
