

# 500mA, Low Quiescent Current, Low-Noise, High PSRR, Low-Dropout Linear Regulator

## 1 FEATURES

- **Input voltage range: 1.9 V to 5.5 V**
- **Output voltage range: 1.2 V to 4.2 V**
- **Up to 500mA load current**
- **Very low I<sub>q</sub>: 20μA(typical)**
- **Very high PSRR: 77dB at 1kHz**
- **Ultra low noise: 17μVrms at 1.8V output**
- **No noise bypass capacitor required**
- **Excellent load/line transient response**
- **Short circuit protection is typical 105mA**
- **With auto discharge function**
- **Output Voltage Accuracy: ±1%**
- **Micro Size Packages: SOT23-5, XDFN1X1-4**

## 2 APPLICATIONS

- **Smart Phones and Cellular Phones**
- **PDA's**
- **MP3/MP4 Player**
- **Digital Still Cameras**
- **Portable instrument**

## 3 DESCRIPTIONS

The RS3217F is a low-noise LDO that can supply up to 500mA output current. Designed to meet the requirements of RF and analog circuits, the RS3217F device provides low noise, high PSRR, low quiescent current, and low line or load transient response figures.

RS3217F is stable with a 1.0μF ceramic input and output capacitor, Using the new innovative design techniques, the RS3217F offers class-leading noise performance without a noise bypass capacitor.

RS3217F is available with fixed output voltages from 1.2V to 4.2V.

RS3217F is offered in a small SOT23-5 and XDFN1X1-4 packages, which is ideal for small form factor portable equipment.

### Device Information <sup>(1)</sup>

| PART NUMBER | PACKAGE   | BODY SIZE (NOM) |
|-------------|-----------|-----------------|
| RS3217F     | SOT23-5   | 1.60mm×2.92mm   |
|             | XDFN1X1-4 | 1.00mm×1.00mm   |

(1) For all available packages, see the orderable addendum at the end of the data sheet.

### Typical Application

### 4 FUNCTIONAL BLOCK DIAGRAM

**NOTE:**

- (1) This information is the most current data available for the designated devices. This data is subject to change without notice and revision of this document. For browser-based versions of this data sheet, refer to the right-hand navigation.
- (2) There may be additional marking, which relates to the lot trace code information (data code and vendor code), the logo or the environmental category on the device.
- (3) RUNIC classify the MSL level with using the common preconditioning setting in our assembly factory conforming to the JEDEC industrial standard J-STD-20F, Please align with RUNIC if your end application is quite critical to the preconditioning setting or if you have special requirement.

## 7 PIN CONFIGURATION AND FUNCTIONS

### Pin Description

| NAME | PIN     |             | I/O <sup>(1)</sup> | DESCRIPTION  |
|------|---------|-------------|--------------------|--|
|      | SOT23-5 | XDFN1X1-4   |                    |  |
| IN   | 1       | 4           | I                  | Input voltage supply. Must be closely decoupled to GND with a 1 $\mu$ F or greater capacitor.  |
| GND  | 2       | 2           | G                  | Common ground.   |
| EN   | 3       | 3           | I                  | Enable input. A low voltage (< $V_{IL}$ ) on this pin turns the regulator off and discharges the output pin to GND through an internal pulldown resistor. A high voltage (> $V_{IH}$ ) on this pin enables the regulator output. The EN pin can be connected to the IN pin if not used. Do not leave floating. |
| NC   | 4       | -           | -                  | Not internally connected.  |
| OUT  | 5       | 1           | O                  | Regulated output voltage. Connect a minimum 1 $\mu$ F low-ESR capacitor to this pin.   |
| -    | -       | Thermal Pad | -                  | Connect the thermal pad to a large-area ground plane. This pad is not an electrical connection to the device ground.   |

(1) I=input, O=output, G= Ground.

## 8 SPECIFICATIONS

### 8.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted) <sup>(1)</sup> <sup>(2)</sup>

|                  |  | MIN                | MAX                   | UNIT |
|------------------|--|--------------------|-----------------------|------|
| V <sub>IN</sub>  | Input voltage                            | -0.3               | 6                     | V    |
| V <sub>EN</sub>  | Enable input voltage                     | -0.3               | 6                     | V    |
| V <sub>OUT</sub> | Output voltage                           | -0.3               | V <sub>IN</sub> + 0.3 | V    |
| I <sub>OUT</sub> | Maximum Load Current                     | Internally limited |                       | mA   |
| θ <sub>JA</sub>  | Package thermal impedance <sup>(3)</sup> | SOT23-5            | 200                   | °C/W |
|                  |  | XDFN1X1-4          | 315                   |      |
| T <sub>J</sub>   | Junction temperature <sup>(4)</sup>      | -40                | 150                   | °C   |
| T <sub>stg</sub> | Storage temperature                      | -65                | 150                   | °C   |
|                  | Load Temperature (Soldering, 10sec)      |                    | 260                   | °C   |

- (1) Stresses beyond those listed under Absolute Maximum Ratings may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under Recommended Operating Conditions is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) All voltages are with respect to the GND pin.
- (3) The package thermal impedance is calculated in accordance with JESD-51.
- (4) The maximum power dissipation is a function of T<sub>J(MAX)</sub>, R<sub>θJA</sub>, and T<sub>A</sub>. The maximum allowable power dissipation at any ambient temperature is P<sub>D</sub> = (T<sub>J(MAX)</sub> - T<sub>A</sub>) / R<sub>θJA</sub>. All numbers apply for packages soldered directly onto a PCB.

### 8.2 ESD Ratings

The following ESD information is provided for handling of ESD-sensitive devices in an ESD protected area only.

|                    |                         | VALUE   | UNIT  |
|--------------------|-------------------------|---|-------|
| V <sub>(ESD)</sub> | Electrostatic discharge | Human-Body Model (HBM), MIL-STD-883K METHOD 3015.9      | ±2000 |
|                    |                         | Charged-Device Model (CDM), ANSI/ESDA/JEDEC JS-002-2022 | ±1500 |

#### ESD SENSITIVITY CAUTION

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

### 8.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)

|                  |                              | MIN | MAX | UNIT |
|------------------|------------------------------|-----|-----|------|
| V <sub>IN</sub>  | Input Voltage Range on IN    | 1.9 | 5.5 | V    |
| V <sub>OUT</sub> | Output Voltage Range on OUT  | 1.2 | 4.2 | V    |
| V <sub>EN</sub>  | Input Voltage Range on EN    | 0   | 5.5 | V    |
| I <sub>OUT</sub> | Output Current Range on IOUT | 0   | 500 | mA   |
| T <sub>J</sub>   | Junction Temperature         | -40 | 125 | °C   |

## 8.4 Electrical Characteristics

Over operating temperature range ( $-40^{\circ}\text{C} \leq T_J \leq 125^{\circ}\text{C}$ ).  $V_{\text{OUT}}=1.8\text{V}$ ,  $V_{\text{IN}}=V_{\text{OUTNOM}}+1\text{V}$ ,  $V_{\text{EN}}=1.2\text{V}$ ,  $I_{\text{OUT}}=1\text{mA}$ ,  $C_{\text{IN}}=1\mu\text{F}$ ,  $C_{\text{OUT}}=1\mu\text{F}$ . Typical values are at  $T_A = 25^{\circ}\text{C}$ .

| PARAMETER                                     | SYMBOL   | CONDITIONS   | MIN                          | TYP   | MAX | UNIT                       |     |

## 9 FEATURE DESCRIPTION

### 9.1 Overview

The RS3217F is a low-noise LDO that can supply up to 500mA output current. Designed to meet the requirements of RF and analog circuits, the RS3217F device provides low noise, high PSRR, low quiescent current, and low line or load transient response figures.

RS3217F is stable with a 1.0 $\mu$ F ceramic input and output capacitor, Using the new innovative design techniques, the RS3217F offers class-leading noise performance without a noise bypass capacitor.

RS3217F is available with fixed output voltages from 1.2V to 4.2V.

### 9.2 Shutdown

Enable input. A low voltage ( $< V_{IL}$ ) on this pin turns the regulator off and discharges the output pin to GND through an internal pulldown resistor. A high voltage ( $> V_{IH}$ ) on this pin enables the regulator output. The EN pin can be connected to the IN pin if not used. Do not leave floating.

### 9.3 Output Automatic Discharge

The RS3217F output employs an internal 75 $\Omega$  (typical) pulldown resistance to discharge the output when the EN pin is low, and the device is disabled.

### 9.4 Thermal Overload Protection ( $T_{SD}$ )

Thermal shutdown disables the output when the junction temperature rises to approximately 165 $^{\circ}$ C which allows the device to cool. When the junction temperature cools to approximately 135 $^{\circ}$ C, the output circuitry enables.

Based on power dissipation, thermal resistance, and ambient temperature, the thermal protection circuit may cycle on and off. This thermal cycling limits the dissipation of the regulator and protects it from damage as a result of overheating.

The thermal shutdown circuitry of the RS3217F has been designed to protect against temporary thermal overload conditions. The  $T_{SD}$  circuitry was not intended to replace proper heat-sinking. Continuously running the RS3217F device into thermal shutdown may degrade device reliability.

### 9.5 Current-Limit Protection

The RS3217F monitors the current flowing through the output PMOS and limits the maximum current to prevent load and RS3217F from damages during current overload conditions.

### 9.6 Short Current-Limit Protection

The short current-limit function reduces the current-limit level down to 105mA(typical) during short circuit conditions.

## 10 TYPICAL APPLICATION

### 10.1 Input and Output Capacitor Requirements

Although an input capacitor is not required for stability, connecting a 1 $\mu$ F low-equivalent series resistance (ESR) capacitor across the input supply near the regulator is good analog design practice. This capacitor counteracts reactive input sources and improves transient response and ripple rejection. A higher value capacitor can be necessary if large, fast, rise-time load transients are anticipated or if the device is located several inches from the power source.

The RS3217F family of devices is designed to be stable with standard ceramic output capacitors of values 1 $\mu$ F or larger. X5R- and X7R-type capacitors are best because they have minimal variation in value and ESR over temperature.

## 11 POWER SUPPLY RECOMMENDATIONS

The device is designed to operate from an input voltage supply range between 1.9V and 5.5V. The input voltage range must provide adequate headroom in order for the device to have a regulated output. This input supply must be well regulated. If the input supply is noisy, additional input capacitors with low ESR can help improve output noise.

## 12 LAYOUT

For best overall performance, place all circuit components on the same side of the circuit board and as near as practical to the respective LDO pin connections. Place ground return connections to the input and output capacitor, and to the LDO ground pin as close to each other as possible, connected by a wide, component-side, copper surface. The use of vias and long traces to create LDO component connections is strongly discouraged and negatively affects system performance. This grounding and layout scheme minimizes inductive parasitics, and thereby reduces load-current transients, minimizes noise, and increases circuit stability. A ground reference plane is also recommended and is either embedded in the printed circuit board (PCB) itself or located on the bottom side of the PCB opposite the components. This reference plane serves to assure accuracy of the output voltage, shields the LDO from noise, and behaves similar to a thermal plane to spread (or sink) heat from the LDO device when connected to the exposed thermal pad. In most applications, this ground plane is necessary to meet thermal requirements.

To improve ac performance (such as PSRR, output noise, and transient response), designing the board with separate ground planes for  $V_{IN}$  and  $V_{OUT}$  is recommended, with each ground plane connected only at the GND pin of the device. In addition, the ground connection for the bypass capacitor must connect directly to the GND pin of the device.

**NOTE:**

1. Plastic or metal protrusions of 0.075mm maximum per side are not included.
2. REF is the abbreviation for Reference.
3. This drawing is subject to change without notice.

# 14 TAPE AND REEL INFORMATION

## REEL DIMENSIONS

## TAPE DIMENSION

NOTE: The picture is only for reference. Please make the object as the standard.

## KEY PARAMETER LIST OF TAPE AND REEL

| Package Type | Reel Diameter | Reel Width(mm) | A0 (mm) | B0 (mm) | K0 (mm) | P0 (mm) | P1 (mm) | P2 (mm) | W (mm) | Pin1 Quadrant |
|--------------|---------------|----------------|---------|---------|---------|---------|---------|---------|--------|---------------|
| SOT23-5      | 7"            | 9.5            | 3.20    | 3.20    | 1.40    | 4.0     | 4.0     | 2.0     | 8.0    | Q3            |
| XDFN1X1-4    | 7"            | 9.5            | 1.16    | 1.16    | 0.5     | 4.0     | 4.0     | 2.0     | 8.0    | Q1            |

NOTE:

1. All dimensions are nominal.
2. Plastic or metal protrusions of 0.15mm maximum per side are not included.

## IMPORTANT NOTICE AND DISCLAIMER
