Soldering condition

- 1. Careful attention should be paid during soldering. When soldering, leave more then 2mm from solder joint to Led, and soldering beyond the base of the tie bar is recommended.
- 2. Avoiding applying any stress to the lead frame while the LED are at high temperature particularly when soldering.
- 3. Dip and hand soldering should not be done more than one time.
- 4. After soldering the LED, the epoxy bulb should be protected from mechanical shock or vibration until the LED return to room temperature.
- 5. A rapid-rate process is not recommended for cooling the LED down from the peak temperature.
- 6. Although the recommended soldering conditions are specified in the above table, dip or hand soldering at the lowest possible temperature is desirable for the LED.
- 7. Wave soldering parameter must be set and maintain according to recommended temperature and dwell time in the solder wave.
